Table 1.—Date of incorporation, population, and area of cities having an estimated population of 25,000 or more on June 1, 1903 . 65–67
Table 2.—Patrolmen and officers and other employees of the police department, and arrests by cause: 1903 and 1902 68–73
Table 3.—Retail liquor saloons and license fees: 1903 and 1902 74–76
Table 4.—Firemen, fire equipment, fire alarms, fires, and property loss from fires: 1903 and 1902 78–89
Table 5.—Public school buildings, schoolrooms, and school teachers: 1903 and 1902 90–94
Table 6.—Pupils registered and average attendance in public schools: 1903 and 1902 95–99
Table 7.—Municipal public libraries: 1903 and 1902 ..... 100, 101
Table 8.—Municipal almshouses and municipal hospitals: 1903 and 1902 ..... 102, 103
Table 9.—Waterworks, gas works, and electric light plants owned and operated by cities: 1903 and 1902 ..... 104, 105
Table 10.—Street lights: 1903 and 1902 ..... 106, 107
Table 11.—Area and length of streets, length of street railways, and area of public parks: 1903 and 1902 108–119
Table 12.—Disposal of ashes, garbage, and other refuse; care of streets; food and sanitary inspection; and miles of sewers: 1903 and 1902 120–131
Table 13.—Building permits: 1903 and 1902 ..... 132, 133
Table 14.—Marriages and divorces: 1903 and 1902 ..... 134, 135
Table 15.—Deaths, classified by cause: 1903 and 1902 136–145
Table 16.—Deaths from each specified cause per 1,000 deaths from all causes: 1903 and 1902 146–155
Table 17.—Death rate per 100,000 population from each specified cause: 1903 and 1902 156–165
Table 18.—Death rate per 1,000 population: 1903 and 1902 166
Table 19.—Grand summary of payments, receipts, and balances, classified by independent branches and funds: 1903 and 1902 .. 167–190
Table 20.—Total payments, receipts, and balances: 1903 and 1902 192–203
Table 21.—Payments for general and municipal service expenses, classified by departments, offices, and objects: 1903 and 1902 . 204–293
Table 22.—Payments for expenses of municipal investments and municipal industries, classified by industries and objects: 1903 and 1902 294–305
Table 23.—Payments for outlays: 1903 and 1902 306–311
Table 24.—Receipts from taxes and privileges: 1903 and 1902 312–317
Table 25.—Receipts from licenses, fines and forfeits, etc.: 1903 and 1902 318–323
Table 26.—General revenue receipts from gifts, contributions, and donations, and from miscellaneous sources: 1903 and 1902 ... 324–329
Table 27.—Receipts from interest: 1903 and 1902 330–335
Table 28.—Receipts of municipal industries, classified by source and by industry: 1903 and 1902 336–347
Table 29.—Departmental receipts, classified by character of revenue and by department or office: 1903 and 1902 348–371
Table 30.—Municipal service income receipts from special assessments for local improvements, and specified temporary receipts and payments: 1903 and 1902 372–381
Table 31.—Payments, receipts, and balances of private trust funds and accounts: 1903 and 1902 382–385
Table 32.—Payments, receipts, and balances of public trust funds: 1903 and 1902 386–393
Table 33.—Payments, receipts, and balances of investment funds: 1903 and 1902 394–397
Table 34.—Payments, receipts, and balances of sinking funds: 1903 and 1902 398–409
Table 35.—Grand summary of debt obligations outstanding at close of fiscal year, and issued and paid during year, together with receipts and payments during year on account of same: 1903 and 1902 410–421
Table 36.—Debt obligations outstanding at close of year: 1903 and 1902 422–427
Table 37.—Value of principal salable possessions at close of year: 1903 and 1902 428–439
Table 38.—Assessed valuation of property, basis of assessment, taxes levied, tax rate, and the per capita assessed valuation, tax levy, and debt: 1903 and 1902 440–445
Table 39.—Total and per capita corporate payments, with accompanying refunds, classified by principal purposes for which made: 1903 and 1902 446–451
Table 40.—Total and per capita corporate receipts, with accompanying refunds, classified by principal sources from which derived: 1903 and 1902 452–457
Table 41.—Total and per capita receipts from general revenues, classified by source, and total and per capita commercial surplus, with accompanying refunds: 1903 and 1902 458–463
Table 42.—Total and per capita payments for specified expenses, with accompanying refunds: 1903 and 1902 464–469
Table 43.—Total and per capita payments for specified expenses and outlays, with accompanying refunds: 1903 and 1902 470–475
Table 44.—Total and per capita payments for expenses and outlays for schools and for miscellaneous educational expenses, and specified receipts for schools, with accompanying refunds: 1903 and 1902 476–481

LETTER OF TRANSMITTAL.

DEPARTMENT OF COMMERCE AND LABOR,
BUREAU OF THE CENSUS,
Washington, D. C., July 31, 1905.

SIR:

I have the honor to transmit herewith a bulletin presenting financial and other official statistics for cities having a population of over 25,000.

The collection of social statistics of cities, statistics of public indebtedness, valuation, taxation, and expenditures, and statistics of births and deaths was authorized by the act of March 3, 1899, providing for the Twelfth Census, and again by the act of March 6, 1902, establishing a permanent Census Office. These classes of statistics had been collected and published in connection with the Eleventh Census, and the act of 1902 provides for their collection decennially. At the time this legislation was enacted statistics of a similar character were being collected and published annually by the Bureau (at that time Department) of Labor. This statistical inquiry had been instituted by a clause in the act of July 1, 1898, which conferred upon the Commissioner of Labor the authority to compile and publish annually an abstract of the main features of the official statistics of cities of the United States having over 30,000 population

The prospect of having two similar or closely related lines of statistical inquiry carried on independently by two distinct Government offices called attention to the need of a consolidation of the work. Accordingly, your predecessor, under authority conferred upon him by law and in conformity with the recommendations of both the Commissioner of Labor and the Director of the Census, issued an order transferring to the Bureau of the Census the work on the statistics of cities which had heretofore been carried on by the Department (now Bureau) of Labor. By a subsequent order, the Secretary, for reasons explained in this bulletin, authorized the postponement of the publication of the annual report for 1903, covering the year 1902. Accordingly, the present report covers two years, 1902 and 1903.

Thus, while the present bulletin is a continuation of the series of bulletins on statistics of cities heretofore compiled by the Commissioner of Labor, it also forms a part of the decennial report provided for by the act establishing the permanent Census Office. Another bulletin is in preparation, presenting the statistics for cities having a population of from 8,000 to 25,000; and it is expected that the decennial reports hereafter will include all cities of over 8,000 population, while the annual bulletin will be confined to cities of 30,000 population or over.

The statistics herewith presented were collected by agents of the Bureau of the Census, who visited the various cities covered by the investigation, obtaining the required data from official records or by personal inquiry of city officials. The financial statistics were collected and tabulated under the supervision of Mr. Le Grand Powers, chief statistician for agriculture. The collection of the other statistics, which cover a variety of subjects, was under the charge of Mr. William C. Hunt, chief statistician for population.

The diversity of the systems of accounting followed in different cities makes it very difficult to classify and tabulate properly the financial data collected by the inquiries. In deciding upon the scheme of classification and terminology here presented, the Bureau of the Census sought the advice and criticism of the National Municipal League, the American Economic Association, and the Federation of Societies of Public Accountants. All of these organizations appointed committees to cooperate with the officials of the Bureau in this branch of the work. It is hoped and believed that, as a result of this cooperation, the accompanying report presents all the salient facts relating to municipal finance in a form which makes the figures fairly comparable for the several cities, and which permits of the proper study of the most important problems of municipal revenues and expenditures.

The officials of the cities visited by our agents have uniformly manifested the utmost interest in the inquiry, and by their courtesy and friendly cooperation have contributed in no small degree to the progress and success of the work.

Very respectfully,

S. N. D. North

Director.

Hon. VICTOR H. METCALF,
Secretary of Commerce and Labor.

STATISTICS OF CITIES HAVING A POPULATION OF OVER 25,000.

INTRODUCTION.

This bulletin relates to a class of data covered by investigations conducted at the censuses of 1880 and 1890 and included in the decennial inquiries authorized by the present census law. At the same time it is virtually a continuation of the series of annual reports on statistics of cities heretofore published by the Bureau (formerly Department) of Labor.

History of the inquiry.—The annual collection and publication of the statistics of cities by the Commissioner of Labor was authorized by act of Congress in 1898. The bulletin publishing the results of the statistics for the year 1901 contains the following statement regarding the origin and history of the investigation:

> By an act of Congress, which was approved and became law July 1, 1898, the Commissioner of Labor was called upon to make an investigation annually into the statistics of the cities of the United States having over 30,000 population. The paragraph of the act referred to is as follows:
>
> "The Commissioner of Labor is authorized to compile and publish annually, as a part of the Bulletin of the Department of Labor, an abstract of the main features of the official statistics of the cities of the United States having over 30,000 population."
>
> In accordance with this act a compilation was attempted from the printed reports of various cities, but owing to lack of uniformity in these reports, and in many cases to the lack of reports themselves, it was found impossible to make such a classification of the various items relating to the governmental, financial, and other conditions of these cities as seemed necessary for a satisfactory comparison. A schedule of inquiries was therefore prepared and the work taken up by the special agents of the Department. This required personal visits to the various officials of the cities coming within the scope of the investigation. These officials in many ways manifested the utmost interest in the investigation, and contributed freely of their time and labor in compiling the data desired and in making the report a success.

The results of the first investigation were printed in the bulletin of the Department of Labor for September, 1899. It will be noticed that the act cited in the above quotation authorized the collection of these statistics annually. The Department accordingly published a similar report in each subsequent year up to and including 1902, making four reports in all.

Inquiries covering substantially the same class of data as that presented in these reports had been conducted by the Census Office at the time of the Tenth and Eleventh censuses, and, in conformity with that precedent, were again authorized by the act of March 3, 1899, providing for the Twelfth Census. The act included these inquiries in the list of statistical investigations which were not to be taken up until after the data relative to population, agriculture, manufactures, and vital statistics collected by the enumeration of 1900 had been compiled and published. That work, in conformity with the requirements of the law, was completed in 1902. In the meantime the Census Office had been placed on a permanent basis by an act passed March 6, 1902, to take effect July 1, 1902. This act, repeating in substance the provisions of the act of March 3, 1899, relative to special statistical investigations, authorized the decennial collection by the Director of the Census of certain specified classes of statistics, including social statistics of cities; statistics of public indebtedness, valuation, taxation, and expenditures; and statistics of births and deaths[1]—subjects covered in part at least by the series of annual reports issued by the Department of Labor.

The prospect of having two similar or closely related lines of inquiry carried on independently by distinct Government offices directed attention to the necessity for a consolidation of the work. The permanent Census Office appeared to be better fitted by its machinery and functions for the conduct of this investigation than the Department of Labor. In view of this fact an effort was made by the Commissioner of Labor, acting in cooperation with the Director of the Census, to secure legislation whereby the work relating to cities carried on by the Department of Labor should be transferred to the Census Office and coordinated with the municipal statistics contemplated in the decennial census reports on this subject. A bill was reported by the House Committee on the Census under which the Census Office was called upon to collect biennially statistics of cities with a population of 30,000 or more, and decennially statistics of cities containing a population of less than 30,000. This bill was reported favorably to the House

[1] Act of March 6, 1902, sections 7 and 8.

of Representatives, February 13, 1903, accompanied by a report in which was incorporated a letter from the Commissioner of Labor recommending the transfer of the work to the Census Office; but it remained on the House Calendar at the expiration of the Fifty-seventh Congress.

In the meantime Congress had passed the act organizing the Department of Commerce and Labor and transferring to that Department both the Census Office, previously in the Department of the Interior, and the Department of Labor.[1] The transfer went into effect on July 1, 1903, and on that date the Secretary of the Department of Commerce and Labor, under authority conferred upon him by the law, and in accordance with recommendations of the Commissioner of Labor and the Director of the Census, issued an order transferring from the Bureau of Labor to the Bureau of the Census all the work on the statistics of cities. Under a subsequent order of the Secretary of Commerce and Labor, dated September 11, 1903, the annual report of the statistics of cities of 30,000 population and over was omitted for the year 1903. This was done in order that the statistics of all cities, irrespective of size, might be collected as of the same date and as a part of the decennial report of the Census Bureau.

It was believed that this transfer of the work and the postponement of the partial report would add materially to the value and comparability of the entire inquiry. Another reason for postponement lay in the fact that the largest and most important series of inquiries included in this investigation related to municipal finance, and was thus identical in character with the investigation which the Bureau of the Census was conducting upon the subject of wealth, debt, and taxation. Therefore, in order to avoid extensive duplication of work in a very difficult field, it was proposed to utilize, in the reports on the social statistics of cities, information obtained from the general inquiry concerning wealth, debt, and taxation.

Cities included in the inquiry.—The inquiry conducted by the Department of Labor was by law limited to cities having over 30,000 inhabitants. The collection of social statistics of cities by the Census is not limited to cities of any specified size so far as any provisions of the permanent census act are concerned. But the Eleventh Census inquiry on this subject included all cities of over 10,000 population, and it was undoubtedly the expectation of Congress that the inquiry provided for by the Twelfth Census act and by the act establishing the permanent Census Office would be equally comprehensive. Taking into consideration the object and scope of the two inquiries now combined—the one an annual inquiry applying to cities of over 30,000 and the other a decennial inquiry including smaller cities—the Bureau of the Census decided to limit the present report, which covers the years 1902 and 1903, to cities of over 25,000 population, and to include in a later report covering the year 1903 only the data for cities between 8,000 and 25,000. In the future the report to be issued decennially will probably comprise all cities above 8,000, while the report to be issued annually will be confined to the cities above 30,000. But 25,000, rather than 30,000, was adopted as the limit for the present report because, when the question came up, the data relative to public wealth, debt, and taxation—one of the special inquiries authorized by the census law—had already been collected for 1902 and included cities above 25,000. It was thought best, therefore, to apply the same limit to the other classes of data which have usually been included in these reports. The collection of the data for 1902 covered only those cities which had an enumerated population of over 25,000 at the Twelfth Census, but that for 1903 was expanded to include all cities having an estimated population of over 25,000 in 1903.

Scope of the report.—The classes of data to be included in the report on statistics of cities are not explicitly defined either in the law instituting the inquiry conducted by the Commissioner of Labor or in that providing for the statistical investigations of the Census. In the one the data are referred to as "official statistics;" in the other as "social statistics."

Congress seems to have expected that the "official statistics" of cities which the Commissioner of Labor was authorized to compile and publish would comprise the data commonly published in the official city reports and would be compiled directly from those reports. But for reasons already stated (see page 1) it was found impracticable to obtain satisfactory results by that method, and accordingly a schedule of inquiries was prepared and agents were sent to the various cities to collect information from city officials. Naturally and appropriately it was such information as could be derived from official records. The scope of the inquiry conducted by the Commissioner of Labor is best indicated by the list of tables published in his last report.

TABLE I.—Incorporation, population, and area.
II.—Dates of ending of years covered by the investigation.
III.—Police, retail liquor saloons, and arrests, by causes.
IV.—Firemen, fire equipment, and property loss from fires.
V.—Marriages, divorces, and births.
VI.—Deaths, by causes.
VII.—Percentage of deaths from each specified cause.
VIII.—Death rate per 1,000 population, by causes.
IX.—Death rate per 1,000 population.
X.—Area of public parks and miles of streets, sewers, and street railways.
XI.—Care of streets, food and sanitary inspection, and disposal of garbage and other refuse.
XII.—Number and kind of street lights.
XIII.—Public schools.
XIV.—Public libraries.
XV.—Charities: Almshouses, orphan asylums, and hospitals.
XVI.—Cost of water, gas, and electric light plants owned and operated by cities.

[1] Act of February 14, 1903.

TABLE XVII.—Building permits.
XVIII.—Debt and legal borrowing limit.
XIX.—Basis of assessment, assessed valuation of property, and taxation.
XX.—Receipts from all sources.
XXI.—Expenditures for construction and other capital outlay.
XXII.—Expenditures for maintenance and operation.
XXIII.—Summary of receipts and expenditures.
XXIV.—Assets.
XXV.—Per capita debt, assessed valuation of property, and expenditures for maintenance.

As regards the scope of the investigation authorized by the act providing for the Twelfth Census and by the permanent census act, it is to be presumed that Congress, in specifying the special inquiries to be conducted by the Census, intended that these inquiries should include substantially the same topics as they included at previous censuses.

No report on social statistics of cities was published in any census prior to the Tenth. But the law under which the Seventh, Eighth, and Ninth censuses were taken (act of May 23, 1850) provided for the collection for the entire country of certain statistics designated as "social statistics." They comprised statistics relative to valuation of real and personal property; annual taxes; colleges, academies, and schools; seasons and crops; libraries; newspapers and periodicals; religion; pauperism; crime; and wages. Most of these inquiries have been continued in the later censuses, although only one or two of them are touched upon in the reports on Social Statistics of Cities.

At the Tenth Census a report on Social Statistics of Cities was issued in two quarto volumes, comprising over 1,700 pages. It consisted mostly of descriptive text and was something in the nature of a gazetteer, being a collection of monographs on the several cities, prepared by different writers and varying somewhat in style of treatment. There was usually a historical sketch of each city, followed by a description of conditions in 1880, which touched upon such features as climate, topography, railroad communications, streets, waterworks, gas, public buildings, parks, places of amusement, drainage, cemeteries, markets, municipal cleansing, police, and fire department. In most cases a map of the city was inserted, and a distance chart indicating direction and distance from other specified cities. A table presenting manufacturing statistics for the city was appended and various statistical data were included in the text, but there were no general or comparative tables covering all the cities.

The Eleventh Census Report on Social Statistics of Cities, prepared by Dr. John S. Billings, presented data relating to the following topics: Altitude, area, density of population, boards of health (membership, number of physicians, expenditures, etc.), streets and alleys, street lighting, waterworks, sewers, parks, cemeteries, public buildings, places of amusement, saloons, public vehicles, licensed dogs, fire department, police department, and suburban travel (on steam railroads). The data were presented in a series of general tables, preceded by descriptive and interpretative text, with illustrative charts designed to facilitate comparisons between different cities or groups of cities as regards such matters as population per acre, population to each street lamp, per capita consumption of water, number of persons to each mile of sewer, etc. The report made a quarto volume of 138 pages.

The present report includes statistics relative to the following subjects: Population, area, police, fire department, public schools, public libraries, cost of municipal water, gas and electric light plants, streets, street lighting, street railways, public parks, building permits, liquor saloons, food and sanitary inspection, removal of ashes and garbage, almshouses and orphan asylums, marriages and divorces, deaths, and public finance.

Thus, while the scope of this report conforms closely to the precedents established by the reports of the Department of Labor, it includes few topics that have not been the subject of investigation at former censuses and have not been authorized by the present census law, the financial statistics being covered by the wealth, debt, and taxation inquiry, the statistics of deaths by the census work on vital statistics, and most of the other topics by the inquiry relative to the social statistics of cities. The statistics of marriages and divorces form, perhaps, the only important feature of this report that has not been included in previous census work.

Statistics of births, although presented in the reports of the Department of Labor, and collected by the agents of the Census for the present inquiry, have not been published, because they are found to be so inadequate and defective that any comparisons or deductions based upon them would be unreliable and probably misleading or erroneous. There are only a few cities in the United States in which the records of births are kept with such a degree of completeness and accuracy that the returns are statistically valuable.

Treatment of the material.—The proper arrangement and analysis of the financial data collected in connection with this inquiry have been the subject of special consideration. The difficulties in the way of applying a uniform and satisfactory classification to the diverse methods of accounting followed in different cities are very great. The aim has been to present results which shall be comparable for the different cities and at the same time secure a differentiation of payments and of receipts conforming to the essential distinctions in the varied activities carried on by modern municipal governments. The scheme of classification finally adopted with this end in view is described at length in the pages which follow.

The tabular presentation of the other data comprised in this inquiry is substantially the same as in the reports of the Department of Labor. These data, as already indicated, cover a variety of unrelated subjects, affording little opportunity for systematization or general discussion. Such explanations as seem to be required are given in the portion of the text presenting, in serial order, descriptions of the separate tables.

No attempt has been made to interpret and compare the statistics here presented. In this respect the Bureau again follows the precedent of the Department of Labor. But it is believed that after the inquiry has been carried on for a longer period and the methods of collecting the statistics further perfected, the time will be ripe for a study and analysis of the data, which may lead to reliable and interesting comparisons and deductions.

MUNICIPAL FINANCE.

The object of the Census investigation relating to municipal finance is to secure and present the principal data relating thereto in a form which will admit of comparisons between the several cities. Among the important questions which may be answered by such comparisons are the following:

The relative total cost of municipal government; the relative cost of maintaining specific public services, such as schools and police and fire protection; the relative cost of constructing and maintaining sewers, streets, etc.; and the per capita revenue derived from all sources or from any specific source.

SOURCES AND CHARACTER OF THE DATA.

The data for the Census statistics of municipal finance are necessarily derived from the books of accounts of city governments. The statistics are affected, therefore, both by the very great differences in the organization of American cities for local self-government, and by the kind of accounts kept.

In some cities practically all municipal activities are administered by a city government having one executive head and a single set of financial officers, the various departments of municipal activity being subject to one control or supervision, and all persons engaged therein receiving their compensation through the same channel.

In other cities the administration of municipal functions is distributed among a number of more or less independent but correlated branches or bodies. The one having charge of the most important functions is usually spoken of as the "city government." But the activities of the "city government" do not include all public activities conducted by the municipality; its payments do not include all payments authorized by the citizens to secure benefits for the people of the city exclusively and at their sole expense; its debt does not include all public obligations resting against the property of the city exclusively; and its receipts do not include all receipts derived from municipal activities.

The "municipal government" for which the Bureau of the Census seeks to present financial statistics is not limited to the "city government," as above defined, but includes all corporations, organizations, commissions, boards, and other local public authorities through which the people of the city exercise any privilege of local self-government, or through which they enjoy the exclusive benefits of any municipal function.

In some American cities the only books of account are those of the treasurers. In other cities additional accounts are kept by the comptrollers or other officers exercising the duties of comptroller or auditor. The treasurers' accounts in both classes of cities are what are known in the business world as "cash accounts." They are arranged to furnish an exhibit of the flow of cash into and out from the treasury and to show whether any of the money received is lost or misapplied. In the great majority of cities in the United States the books of the comptroller or similar officer, where such exists, are in some of their essentials the same as those of the treasurer. They include accounts with the treasurer, which are a check upon his transactions and upon those relative to appropriations. In the great majority of cases, however, they are accounts with cash and not with revenue and expense, and hence are not primarily designed to show cost of operation or maintenance, as are revenue and expense accounts in commercial accounting.

The differences here noted between the accounts of most cities and those of the commercial world have their origin in the varying character of the transactions which they record. The object of the transactions of the ordinary business man or corporation has always been profit; hence the primary purpose of his books of account is to show the cost of conducting his business and the resulting gain or loss. On the other hand, governments, state and municipal, were originally organized for and engaged exclusively in providing for the common defense or in promoting the common weal. Naturally, under such circumstances, governmental accounts were originally designed to show the fidelity and honesty of the fiscal officers, rather than the ends sought by commercial accounting.

The establishment within the last century by municipal governments of such *quasi private* undertakings as waterworks, electric light works, gas works, tramways, etc., has brought into the administration of cities many problems akin to those met with in the conduct of private business. This fact does not, however, change the essential character of municipal governments, which

still have as their primary object the securing of the common defense and the promotion of the common weal. The principal ends of municipal accounting, as pointed out by many writers on public finance, must therefore remain somewhat different from those of commercial accounting.

The commercial character of the transactions connected with the management of municipal enterprises, such as waterworks, etc., and the business problems that have arisen in connection therewith have, however, led in Great Britain to the quite general introduction of revenue and expense accounts in the administration of these enterprises. This has been followed in a less degree by the use of similar accounts in the ordinary governmental transactions of those cities. A few cities in the United States have also introduced such accounts. Their further extension will undoubtedly depend upon whether they prove to be of as great practical value in the domain of municipal finance as in that of private business.

As has been pointed out, the first municipal accounts introduced were merely records of the flow of cash into and out from the public treasury. They were designed solely to prove that none of the money received was lost or misappropriated, and that is all that is now shown by the accounts of many of the smaller and a few of the larger American municipalities. Most of the more progressive municipalities, however, have introduced into the cash account of the treasurer or comptroller certain devices by which that account is made to show incidentally the relation between expenditures and results, thus enabling the officials to obtain indirectly from their cash accounts what is shown directly by commercial revenue and expense accounts.

The devices referred to consist of keeping in the office of the comptroller, or in the case of nonexistence of such office in that of the treasurer, more or less detailed exhibits of receipts, classified by sources, and of payments, classified by objects. In such cases the proper classification with respect to outlays, expenses, revenues, and indebtedness, of the items in the accounts referred to, will furnish an approximate statement of the cost of operating the municipal government or of maintaining any of its functions for any given fiscal year, and will also show the relation between expenditures and results, provided all the bills are presented when due and settled at once by the issue of warrants to be paid in the immediate future.

The problem of securing from the treasurer's or comptroller's books a statement of the cost of governmental operation and maintenance and expenditures for the acquisition or construction of fixed assets, is more difficult in the case of cities in which large numbers of warrants, or orders having the authority of warrants, are paid in a year subsequent to their issue. Under such conditions the classified exhibit of the treasurer's transactions for any given year may show no payment for the support of a certain function—as the police or schools—while for the next year it may show disbursements twice as great as the actual cost of maintenance. In such cities the aggregate of warrants drawn in settlement of claims more nearly represents the cost of governmental operation and maintenance and expenditures for fixed assets than does the aggregate of those paid. Yet the tabulation of warrants drawn, combined with a statement of receipts, does not furnish a complete exhibit of the financial transactions of a given year; it does not include a statement of the payment of warrants or bills payable drawn in previous years but liquidated during the current year; and hence, from the standpoint of municipal accounting, it is as imperfect as would be a trader's accounts from which were omitted outstanding liabilities for purchase of merchandise. To make an approximately complete exhibit for a given fiscal year of the financial transactions of cities of the class referred to in this paragraph, not only must the comptroller's record of warrants drawn during the year be presented, but the treasurer's statement of warrants paid or liquidated during the year must distinguish those outstanding at the beginning of the year from those drawn during the year.

CLASSIFICATION OF MUNICIPAL FUNCTIONS.

From the standpoint of the student of economics, municipal activities and transactions are of two radically different types. One includes those municipal activities which are performed for all citizens alike without compensation, the expense being met by revenue obtained principally from compulsory contributions levied without regard to the benefits which the contributors may individually derive from any or all municipal activities; the other includes those activities from which a revenue is derived that represents a partial or full compensation or return for the privileges granted, commodity or property sold, or specific service rendered.

The activities and transactions of the first class are here classified as arising from the *governmental* functions of a municipality; those of the second class as arising from its *commercial* functions. The two classes of functions may be divided as follows:

Governmental functions.—The term *governmental functions* as here used includes those municipal functions which are as a rule performed for all citizens alike without any attempt to measure the amount of benefit conferred or exact compensation therefor. Most of them are essential to the existence and development of government and to the performance of the governmental duty of protecting life and property and of maintaining a high standard of social efficiency. Chief among such activities are those of general administration; the protection of life, health, and property; the care of the defective, delinquent, and dependent classes; the education of the young, and the performance of

other duties of a similar nature; the purchase of lands for municipal buildings, parks, and streets; the erection, equipment, and management of city halls and other buildings for general municipal uses; and the purchase or construction and operation of gas and electric light works for the exclusive purpose of lighting the streets and the city buildings, and of other structures and plants—such as printing offices, police and fire telephone systems, and bridges—for furnishing free of charge any commodity or service required by the city in the common interest of all its citizens. In the same category are included the opening, grading, paving, and curbing of streets, and the construction of sewers, where such public improvements are made at public expense, without, in the opinion of the proper authorities, conferring upon particular individuals measurable special benefits, for which compensation is exacted by the city. To the same general group belong the making and paying of loans and the payment of interest thereon, when such loans are made in connection with the other activities and transactions before mentioned.

The general governmental functions of municipalities may be classified in a great variety of ways, according to the point of view from which considered. For example, they may be classified with reference to the name or character of the office through which they are exercised, or the class of transactions to which they give rise. The most desirable method of classification for statistical purposes has been the subject of considerable discussion and agitation in the United States during the last ten years. One of the first American studies in this field was a paper by Prof. Frederick R. Clow, published in the Quarterly Journal of Economics in July, 1896, which makes large use of the results of the researches of Professor Wagner, set forth in his *Finanzwissenschaft*. Professor Clow's paper was followed by one read by Prof. L. S. Rowe, of the University of Pennsylvania, before the conference of the National Municipal League in 1899. These two papers brought the subject to the attention of all interested in good municipal government and in the securing of comparable municipal statistics. In the last two years a further study of the subject has been made by a large number of men connected with the National Municipal League, the American Economic Association, the various associations of American accountants, and by the fiscal officers of a large proportion of our cities.

In accordance with the basis of classification referred to in the preceding paragraph, governmental functions are subdivided by the Bureau of the Census into nine general divisions, as follows: I. General administration; II. Public safety, including protection to life, health, and property; III. Public charities and corrections; IV. Public highways and sanitation; V. Public education, including libraries and museums; VI. Public recreation; VII. Miscellaneous (i. e., unclassified); VIII. Public debt transactions, including the liquidation of loans and the payment of interest thereon; and IX. Public revenue transactions. In the tables of this report these nine groups are further separated into numerous subclasses, and in the text accompanying the tables detailed descriptions of the nine classes and their subdivisions are given. It is said, in passing, that in some minor details this classification is only tentative, and is subject to change in the future in the interest of more complete and comparable statistics of American municipalities.

The foregoing classification may properly be designated as that of the National Municipal League, since its members and committees have done the most effective work in adapting the classification to the administrative needs of American cities, and to the purposes of statistical comparison. While making use of the Municipal League's classification—modified in certain details to meet the exigencies arising in connection with the practical work of preparing comparable statistics of cities—the Bureau of the Census wishes to give the greatest credit to all who have taken part in the labor of perfecting it.

Commercial functions.—The commercial functions of cities include those which create trade relations, industrial or semi-industrial, between the municipality and the general public, including other municipalities or civil divisions. Among the transactions which arise from the exercise of such functions are those involving the loan of public money at interest, the use of public property for compensation, the sale of any commodity or article of commerce, or the performance of any work or service for pay. All these transactions involve the performance by the city of some service or the grant of some favor for special compensation, whether such service is undertaken or favor granted primarily for the service to be rendered or favor bestowed, or for the revenue to be secured. None of them is essential to the existence and development of the government, although they may be made to contribute to its support.

Commercial functions, together with commercial and semicommercial transactions which arise from them, may be grouped into three subclasses, here designated as *municipal investments*, *municipal industries*, and *municipal services*.

(1) Under "municipal investments" are included all transactions of municipal governments connected with the purchase, sale, or possession of real property or securities held exclusively for investment purposes, and the loan of public money to individuals, corporations, or other civil divisions. Such transactions are of two classes: First, those of the sinking, investment, and public trust funds in which or through which the city invests money for the sole purpose of deriving interest, rent, or other income therefrom; second,

the transactions of a more temporary character by which the city receives interest on current cash deposits and on deferred payments of taxes and special assessments.

(2) "Municipal industries" are those activities—such as municipal waterworks, gas and electric light works, and street railways—which are organized as more or less complete departments or offices of cities for the purpose of furnishing economic utilities to individual citizens or to other civil divisions on such terms involving a compensation as may be determined by considerations of public policy. These activities are generally referred to by British writers as *municipal trading*. They are also frequently called *quasi private industries* or *enterprises*. As economists use the term, a *quasi private* industry or enterprise of a municipality is one in which the purpose of realizing a net income or profit controls the method of management and determines the charges, as in a private business of similar character. In this strict sense of the term there are few, if any, *quasi private* industries or enterprises in the United States, the greater number of municipal industries established in American cities having been called into existence principally or solely to promote the welfare of the citizens. Hence the Bureau of the Census uses the term *municipal industries* to include not merely those properly designated as *quasi private*, as defined above, but all departments, offices, or activities organized by cities to furnish utilities to their citizens for a compensation but without regard to the question of profit.

(3) "Municipal services" include all activities and transactions, other than such as are included in (1) and (2), which are engaged in by cities or by any of their independent branches or departments in the interest of the general public, but which confer measurable special benefits—or what are arbitrarily so regarded—upon particular persons, natural or corporate, for which compensation is exacted. These services include the opening of streets, the construction of pavements, sidewalks, and sewers, the sprinkling of streets, and similar services, the payments for which are enforced by means of special assessments. In the same category belong also all services or special benefits rendered to private individuals or to other civil divisions *under legal regulations*, and paid for by fees, charges, rents, privilege rentals, and kindred remuneration.

It should be noted that municipal services, as above defined, are always performed or rendered incidentally and in addition to the regular work of the various departments and offices. Receipts therefrom are always classified according to the office or department rendering the service, since, save in rare instances, the corresponding expenses can not be fully separated from the other expenses of such department, office, or industry.

NOMENCLATURE.

As already stated, the books of but few American cities or other civil divisions are kept on the basis of ordinary commercial accounts. As a natural result, the financial terms introduced into governmental usage, and still quite generally employed therein, relate chiefly to the movement of cash into or out from the public treasury, or to the issue of orders directing the payment of such cash.

In common language, *receipt* is the term uniformly employed in both public and private accounting, in Great Britain as well as in the United States, in referring to the movement of cash into a treasury. The word is also employed in commercial accounting, and in common language, in a manner to include the acceptance of anything of exchangeable value, as well as of cash.

A *payment* is the exact opposite of a receipt. It is the settlement of a claim by cash or by anything of an exchangeable value.

In governmental accounts and reports, the three words most frequently employed in referring to the movement of money from the public treasury, or to the issue of orders upon that treasury by the comptroller or auditor, are, in the order given, *expenditures*, *payments*, and *disbursements;* in Great Britain usage is divided between *payments* and *expenditures*.

The three words were used at first with varying signification, according to their derivation. The original meaning of *disbursement* was the taking of money from a common purse by one having authority to do so. In like manner, a *payment* was at first the settlement of a claim or debt, or the compensation for value received in goods or services; and an *expenditure*, the taking from a common stock for use, i. e., the consuming or exhausting of that stock. But although these three words differ in derivation and in fundamental meaning, as applied at the present time to the transactions of the treasury they are interchangeable and synonymous, all being used to describe what is technically known as the "movement of cash" (i. e., money and "current credits," such as checks, etc.) from the treasury.

In the language of governmental finance, and in common speech, *disbursement* is always limited to the going out of "cash," as above defined, from the supply on hand. *Expenditure* is sometimes employed with the same meaning, but in public finance it is generally used in referring to the issue of orders upon the treasury by the comptroller or auditor; no case has been found, however, either in public financial reports or in books relating to commercial accounting, in which the word is used to include at the same time both the disbursement of "cash" and the settlement of claims by the issue of warrants or equivalent orders. The word *payment* is employed in public finance with the two meanings above

set forth for *expenditure*. In commercial accounting and in the language of everyday life it is used also to include both the liquidation of claims by "cash" and their settlement through the issue of orders or bills payable.

For the purposes of a treasurer's report, these three words are quite generally used interchangeably, with equal propriety, and more appropriately than any other words that have hitherto been employed for such purposes. In their original meanings the words *disbursement* and *payment* are especially appropriate in the report of the treasurer in speaking of the movement of cash from the common fund, and the words *expenditure* and *payment* in the statement of facts shown in the reports of comptrollers or auditors.

In the United States, when comparisons are made between the reports of one city or state and those of another, great confusion often arises from the fact that public finance does not show any uniform usage with reference to these three words. This confusion is increased by the occasional use of the word *expense* with the meanings commonly attached in governmental reports to *expenditure*, as explained above. Such use of *expense* is unknown in commercial accounting, and it is hoped that its use in this sense will soon disappear from public finance. It should be used only with the single signification given it in commercial accounting, to which attention is called below.

Seeking to adjust its classification and terminology as closely as possible to the existing usages of public and private accounting, the Bureau of the Census has adopted the word *receipts* to signify the aggregate receipts in cash and in goods and services, and the word *payments* for use in speaking of the aggregate liquidation of claims and outstanding warrants by cash and by the issue of warrants, orders, bonds, or other evidence of indebtedness.

It has already been stated that in a very few American cities, and in quite a large number of those of Great Britain, there has been introduced a system of accounts modeled upon that in use in commercial houses, and kept on what is generally referred to as the "revenue and expense basis." This system of accounts has as its central aim the determination of the cost of governmental maintenance and operation.

To denote such cost there are two terms, *expense* and *expenditure*. In commercial accounting, both in the United States and in Great Britain, the former is almost universally employed. In the British cities which have adopted revenue and expense accounts, usage is divided between the two words. In the United States, where but few cities keep books on the revenue and expense basis, very little use is made of either word in public finance for the purposes mentioned, but preference is given to *expense*. The almost universal use of *expense* in commercial accounting with the signification noted, and also because of the very extensive use of the word *expenditure*, in both the United States and Great Britain, to designate cash payments from the treasury or orders for such payments issued by the auditor or comptroller, has led the Bureau of the Census to select the word *expense*. But little confusion can result from this choice, while much might follow that of *expenditure*.

In private business transactions, the words *income* and *earnings* are quite generally used as the opposite of *expense*. In Great Britain, in referring to that which in municipal finance corresponds to the income or earnings of a private individual or corporation, the majority of the cities which present revenue and expense accounts in their published reports make use of either *income* or *revenue*. As American lexicographers have appropriated the latter for use in governmental finance with the meaning which they, in common with American accountants, associate with the words *income* and *earnings* in private business, the Bureau of the Census has adopted *revenue* rather than *income*.

The use of *income* or *earnings* in private business and of *income* or *revenue* in the accounts of British municipalities excludes receipts from loans, receipts as agent or in any private trust capacity, and all kindred or related receipts. The use of the word *expense*, in the same way, excludes payments on loan account or in any fiduciary capacity. The Bureau of the Census thus employs these words, even though by so doing it departs to a slight extent from the meanings assigned to them by fiscal reports of many cities and other civil divisions in the United States. It is sought to use these and all other technical words in public finance in strict conformity with the universal usage of commercial accounting where the same differs from that of individual cities or other governments, unless there is some essential difference in public finance and private business calling for a different choice of technical terms.

In commercial accounting the costs of acquiring what are generally known as "fixed assets," the lands, buildings, and equipments to be permanently used in business, are referred to as *capital expenditures* and *capital outlays*, i. e., expenditure or outlay for what is designated "capital." The same terms have been, and are now to a limited extent, employed in public finance. Many fiscal officers and economic writers have, however, objected to the use of the word "capital" in governmental accounts. They urge that governments, unlike individuals, do not have capital. None of the liabilities are "capital liabilities," as that term is used in commercial accounts, and their assets should not, therefore, be referred to as "capital assets." In view of these objections, the Bureau of the Census has adopted the word "outlays" as the term to be used in referring to the cost of the fixed properties, public works, and equipment of cities. The word "outlays" is chosen rather than "expenditures," owing to the use of the latter with a number of different meanings, to which attention has already been called.

CLASSIFICATION OF EXPENSES, OUTLAYS, AND REVENUES.

The expenses, outlays, and revenues of cities may be classified in a great number of ways. The most important, however, is the one based upon the classification of municipal functions, which has already been given. On this basis, expenses, outlays, and revenues are classified as *general* and *commercial*, with a further subdivision in nearly every case.

Expenses.—The expenses of a municipality are the costs, paid or payable, of services, rents, and materials, purchased or otherwise obtained, for corporate maintenance and operation and for conducting the business undertakings for which it has corporate authority. It should be noted that expenses incurred always increase liabilities without any corresponding increase of assets, or decrease assets without a similar decrease of liabilities.

General expenses.—General expenses are those incurred in connection with the exercise of governmental functions. In the tables of this report general expenses are divided into the following classes, with many subclasses: (1) General administration, (2) public safety, (3) public charities and corrections, (4) public highways and sanitation, (5) public education, etc., (6) public recreation, (7) miscellaneous, and (8) interest.

Commercial expenses.—The commercial expenses of a city are those incurred in connection with the exercise of its commercial functions. They are divided into three subgroups, as follows:

(1) *Municipal investment expenses*, which are the total costs of the administration of sinking, investment, and public trust funds, including interest paid on loans made for securities or properties purchased for those funds.

(2) *Municipal industrial expenses*, which are the total costs of the operation and maintenance of municipal industries, including the cost of materials used and interest on loans made specifically for such industries.

(3) *Municipal service expenses*, which are the expenses incurred by a city in connection with municipal services performed or provided by any of its departments or offices other than a municipal industry, including interest on loans which are to be met from the proceeds of special assessments.

Outlays.—The outlays of a municipality are those costs, paid or payable, incurred by it in the purchase of lands and in the purchase or construction of buildings and other structures, equipments, improvements, and additions which are more or less permanent in character.

General outlays.—The general outlays of a city are those made in the exercise of its governmental functions. They may be divided, according to the nature of the properties or public works secured thereby, into two groups, as follows:

(1) *For salable but unproductive possessions.*—Under this head are included general outlays for fixed properties—such as public buildings and grounds—which are of a character that would permit of their sale under conditions approximating those under which private property is sold, but which, unlike the ordinary fixed assets of a business corporation, are not employed for securing an income.

(2) *For unsalable and unproductive public works.*—Under this head are included all general outlays for streets, street paving, sewers, and kindred improvements which are not used for securing an income, and which are not of such a character as to admit of a sale under conditions approximating those under which private property is sold.

Commercial outlays.—The commercial outlays of a city are those made in the exercise of its commercial functions. They may be divided, according to the nature of the properties or public works acquired thereby, into two groups, as follows:

(1) *For salable and productive possessions.*—Under this head are included outlays for such fixed properties of municipal industries as are utilized for the production of a municipal income, and are of a character to permit of their sale under conditions approximating those under which private property is sold. Outlays for such properties may with propriety be designated as *industrial outlays*, and the properties may also be referred to as *industrial properties.*

(2) *For unsalable and unproductive public works.*—These are outlays, not connected with municipal industries, which are made in the interest of the general public, but are accompanied with such measurable service or benefit to particular individuals, or which are arbitrarily so regarded, as to call for compensation therefor. They include outlays for the opening and grading of streets; the construction of sidewalks, curbings, and sewers; and any other improvements of a more or less permanent character which so enhance the value of private property that they are paid for by special assessments upon the property benefited. Such outlays may with propriety be referred to as *outlays for special improvements.*

From the standpoint of the accountants of the several cities it is very desirable, if not absolutely necessary for any correct exhibit of municipal transactions, to separate "outlays for special improvements" from all other outlays. It is necessary, therefore, to assign such outlays to a subclass by themselves, as is done above. In this connection attention is called to the fact that students of economics may prefer to assign "outlays for special improvements" as a subclass of general outlays, rather than as one of "commercial outlays," as is here done. In such an event it will be easy, with the segregation of such outlays, to make any needed change in the grouping of this class of municipal expenditures.

Revenues.—The revenues of a municipality are the amounts received or receivable, in cash or other form, for meeting its expenses and outlays, from the exercise of its corporate powers of taxation and police control,

and its corporate authority to conduct business undertakings. They always increase the resources of the city without any corresponding increase of obligations, or they decrease its obligations without a similar decrease of resources.

General revenues.—General revenues consist of compulsory or voluntary contributions of private individuals or corporations, levied or collected to defray the general costs of government, and not conditional upon the performance of any specific service to the individual contributor. The greater portion of such revenue is derived from *taxes*. The remainder is obtained from *licenses*, *permits*, *penalties*, *fines* and *forfeits*, *gifts*, *contributions*, and *grants*, and from miscellaneous sources—the last consisting largely of unclassified items of corporate receipts, most of which might be grouped under other heads if exact information concerning their character were available.

Commercial revenues.—The commercial revenues of a city are those derived from its municipal investments, industries, and services. They all involve payments to the city, by special assessments or otherwise, for specific services or benefits rendered to individual citizens or to other governments.

In the United States the word *income* is generally used in popular speech to designate the total of rents, interest, profits, and salaries or wages received by individuals, while the word *revenue* is at present generally employed in harmony with the definition thereof already given—namely, the income of a government. The word *income* is also employed in public finance, quite commonly in Great Britain and to a limited extent in the United States, to designate those revenues of cities and other civil divisions—such as revenues derived from rents, interest, municipal industries, and municipal services—which approximate in character the income of an individual. It is in this sense that the word *income* is used by the Bureau of the Census in its fiscal terminology, in dividing the commercial revenues of cities into the following subclasses:

(1) *Municipal investment income* is the total income from municipal investments.

(2) *Municipal industrial income* is the total gross earnings of municipal industries.

(3) *Municipal service income* is the income derived by cities from municipal services performed or provided by departments or offices other than municipal industries. It is of two distinct classes: (1) That for meeting municipal service expenses, and (2) that for meeting special improvement outlays.

CLASSIFICATION OF PAYMENTS AND RECEIPTS.

Payments.—The payments of a municipality are the amounts of money, or of the equivalent of money, paid out by it in its fiscal transactions. The word *payment* is used also in two other closely related senses: (1) The discharge of an obligation in money or its legal equivalent, and (2) the act of delivering money or its equivalent, in return for value received or in settlement or discharge of claims.

Receipts.—The receipts of a municipality are the amounts of money, or the equivalent of money, taken in by it in its fiscal transactions. The word *receipt* is applied also to the act of taking or accepting money or its equivalent.

Classification as ordinary and extraordinary.—For reasons already set forth, the statistical exhibit of municipal finance compiled by the Bureau of the Census is primarily one of payments and receipts, and not of expenses, outlays, and revenues. Such payments and receipts may be classified in a great variety of ways.

The oldest classification of governmental payments and receipts, and the one at present in most general use in the United States, Great Britain, and continental Europe, is the classification as "ordinary" and "extraordinary." But the terms *ordinary* and *extraordinary* are given a great variety of meanings, the difference being due in some cases to changes incident to the passage of time, and in others to variations in local laws governing fiscal affairs. As a result, what is unusual or extraordinary in one generation or century may become common or ordinary in a succeeding one, and the same kind of receipt or payment may be extraordinary in one state or city and ordinary or common in another.

In the financial statistics of German cities, which are all similarly organized and conduct their affairs under more or less uniform laws, the terms *ordinary* and *extraordinary* are very useful and valuable. Under uniform laws for municipal accounting the same thing would doubtless be true of the cities of the United States, but the provisions of existing laws differ so widely, and the number of forms of municipal organization is so great, that there has been no opportunity for the development of a uniform usage of these words by fiscal officers. The only approximation to such uniformity is secured by persons who class as *extraordinary* those payments to which commercial accountants refer as capital outlays or capital expenditures, and include among extraordinary receipts those from loans.

American writers and students of municipal finance who use the words *ordinary* and *extraordinary* agree in including under these terms very little more than the items mentioned above. It may be said, therefore, that in a measure the distinction drawn between ordinary and extraordinary payments and receipts corresponds approximately to those which are shown in books of commercial accounting by the two classes of accounts known as "revenue and expense" and "capital and loan." Under these circumstances it has seemed advisable to the Bureau of the Census to discard these words, and to denote the classification referred to above by the use of terms derived from commercial accounting.

In discarding, for the time being, the use of the old designations *ordinary* and *extraordinary*, the fact is not

lost sight of that the classification of accounts on the basis suggested by those words may hereafter be made very useful by the general adoption of uniform definitions. Some American states—notably New Hampshire—classify as *ordinary* the payments or expenditures which are authorized by general law, and as *extraordinary* those which are authorized by special acts of the legislature. Such a classification, if adopted by all the states, would be of great value to students of public finance in tracing the relation between general and special legislation. Still other uses of the words found in financial writings and reports suggest other meanings, the adoption of which would prove most valuable for comparing the financial exhibits of different cities or states acting under similar general laws.

Classification as corporate and temporary.—The most important object of the investigation of municipal finance, as was pointed out in the beginning, is the ascertaining of the total and relative cost of municipal government. To show that and allied facts in their proper relations, municipal payments and receipts must be separated so as to distinguish those which are vitally related to meeting the expenses and outlays of the government, and to the administration of the various governmental and commercial functions of the city, from those which are not so related. On that basis the Bureau of the Census recognizes two general classes of payments and receipts: (1) Those which it designates as *corporate*, meaning thereby those which are vitally related to the aggregate activities of the various branches or departments of the municipality, as already defined; and (2) those to which it applies, for want of a better term, the designation *temporary*, including thereunder all which are not connected in a vital way with the maintenance of such activities.

To show in detail the cost of particular functions and the receipts provided for meeting the same, corporate payments and receipts may properly be classified, according to municipal functions, in the manner outlined for expenses, outlays, and revenues. The Bureau of the Census in this report, however, is unable to make as complete a classification of this character as it hopes to do in the future. For example this report does not separate the outlays which are to be finally met out of general revenues from those to be paid by special assessments; the interest payments on account of special assessment loans, loans incurred for securing the fixed properties of municipal industries, and loans for purchasing the investments of investment funds, from payments of interest on account of other loans; nor the payments for municipal service expenses from those for general expenses. This separation can be secured with a fair degree of accuracy in all cases except the one last mentioned. As a result of the factors above mentioned, the payments for all municipal service expenses, including those for interest on loans on account of municipal industries and investments, are combined with the payments for general expenses in Table 21. For similar reasons the payments for outlays for special improvements are included with general outlays in Table 23. From their character the greater portion of the payments for special improvement outlays are included in Table 23 in the column, "public highways and sanitation."

Classification by administrative funds.—In the practical administration of municipal finance primary consideration is given to that classification of municipal payments and receipts which springs from specific laws relating to the collection and disbursement of revenues. Certain revenues, by general laws and ordinances or by specified appropriations, are set aside for designated purposes. In the same way all the multitudinous payments of a city are regulated by law or ordinance or special appropriation, each of which must be taken into consideration in fiscal administration and in municipal accounting. The foregoing statement applies in one form or another to all of the so-called temporary payments and receipts of cities, as well as to those here designated corporate. With all the diversity of laws, ordinances, and methods of making municipal appropriations, the fiscal administrations of most cities have certain factors in common, to which consideration must be given in any statistical presentation of public finance. These common factors are found in the laws which prescribe, or in the methods adopted for, the administration of moneys appropriated or held for the several municipal funds; and in the tabulation of receipts and payments by the Bureau of the Census a classification by municipal funds is presented in combination with the classification by municipal functions. The various funds created to assist in the administration of municipal finance, here referred to in a general way as *administrative* funds, are given specific designation according to the character of the assets comprising them, the purposes for which they are held, the conditions limiting their use, etc. Most administrative funds are merely accounts with receipts from specified sources of revenue or with payments made in accordance with the terms of appropriations for specified objects. Among such funds are those commonly designated general revenue, salaries, schools, police, waterworks, electric light works, etc.

Classification of corporate payments.—Corporate payments are arranged by the Bureau of the Census in six groups, as follows: Payments for (1) general and municipal service expenses, (2) municipal investment expenses, (3) municipal industrial expenses, (4) outlays for municipal industries, (5) other outlays, and (6) debt obligations. Payments for municipal service expenses do not properly belong in the same group with those for general expenses, but they are so included for reasons previously stated.

The payments for *general and municipal service expenses* are given in Table 21 and distributed under eight main heads, as follows: (1) General administration, (2) public safety, (3) public charities and corrections, (4) public highways and sanitation, (5) public education, etc., (6) public recreation, (7) miscellaneous, and (8) interest. A similar scheme of classification by departments is applied to general outlays and outlays for special improvements, the classes comprising all those just enumerated except the last two. Payments for *municipal industrial expenses* are, so far as practicable, classified under the appropriate municipal industry or undertaking, as expenses for waterworks, electric light works, etc. *Payments for municipal investment expenses* are those made to meet the expenses incurred in the administration of sinking, investment, and public trust funds. They are given in Table 22, but are not separated into those for the three classes of funds. For the great majority of cities the expenses given are those connected with the administration of sinking funds. The payments for debt reduction, both corporate and temporary, are given in Table 35. The corporate payments are those marked [6] in 1902 and [9] in 1903 in division with title "excess of receipts over payments, exclusive of changes in sinking fund assets" in the column with title "public." They represent the excess of payments to public for reduction of debt over receipts from public for new debt obligations issued.

Classification of corporate receipts.—The corporate receipts of a municipality are its net receipts from revenue, and from loans which increase indebtedness. By net receipts are meant the receipts from the sources mentioned, after deductions for refunds and all kindred duplications by counterbalancing payments and debits classed as temporary.

Corporate receipts are arranged by the Bureau of the Census in five general groups, as follows: Receipts from (1) general revenues, (2) municipal investment income, (3) municipal industrial income, (4) municipal service income, and (5) debt obligations.

Receipts from general revenues.—The receipts comprised under *general revenues* consist of taxes, licenses, permits, penalties, fines, gifts, and contributions.

A *tax* is a general compulsory contribution of wealth collected in the general interest of the community from individuals or corporations by an exercise of the sovereign power of the government, and levied without reference to the special benefits which the contributors may severally derive from the public purposes for which the revenue is required.

Property taxes are direct taxes upon property, or upon persons, natural or corporate, in proportion to their property, except only such as may be specifically exempt on account of its or their public character or from considerations of public policy. Property taxes are the most important single source of municipal revenue and are divided by the Bureau of the Census into two principal classes, designated *general* and *special*. General property taxes are direct taxes levied upon property in general, in proportion to its assessed or appraised value. Under this head are included all property taxes whose assessment and collection are by methods substantially identical with those employed in the taxation of the property of the average citizen. Special property taxes are direct taxes levied or collected, or levied and collected, by methods not applied to property in general. Among such taxes are those popularly referred to as corporation taxes, bank taxes, security taxes, mortgage taxes, frontage taxes, tonnage taxes, merchants' taxes, manufacturers' taxes, etc.

Under the head of *poll taxes* the Bureau of the Census has sought to secure as complete an exhibit as possible of the receipts by cities from all forms of per capita taxes, whether levied uniformly upon all males or graded according to occupation, or otherwise; and whether levied as a specific amount against all persons subject thereto, or as a quasi property tax based upon an arbitrary valuation of polls.

Under *special business taxes* the Bureau of the Census has tabulated taxes collected from persons, natural or corporate, by reason of the business in which they are engaged, where such collection is not associated with the granting of a license or permit to engage therein.

Under the designation *receipts from licenses and permits* the Bureau of the Census has tabulated all revenues collected from persons, natural or corporate, by reason of the business or calling in which they are engaged, where such collection is associated with and enforced by the granting of a license or permit to engage therein, and where the granting of such license or permit is a condition to the transaction of business or the following of a trade or industrial calling, the performance of any act, or the beginning of any undertaking.

The revenues from licenses and permits include, according to the analysis of most writers on public finance, a tax, as already defined, and a fee or charge, as defined on a later page. The fee is the payment for the clerical labor of issuing and recording the license or permit and of supervising the exercise of the privilege granted thereby, and the tax is the excess over the fee. It is impossible, from the records of any city, to separate, according to the foregoing economic analysis, the fees from the taxes connected with the granting of licenses and permits. Inasmuch, however, as the greater portion of the receipts from licenses, as well as a considerable portion of those from permits, are taxes, the whole are tabulated as receipts from general revenues. An added reason for so tabulating them is the fact that in fees the receipts are always wholly for a service performed and not for a privilege granted, while in licenses and permits they are primarily payments for privileges granted and only incidentally for services performed.

Revenues collected in connection with the granting of licenses and permits are in most states referred to

as receipts from licenses and permits. In a few states they are designated "privilege or occupation taxes." In the tables the receipts from licenses and permits are reported separately. In its tabulation the Bureau of the Census has observed the following distinction between the two classes of receipts: With *licenses* are included privileges granted for the management or conduct of a business or occupation, such as that of a hotel keeper, the trade of a plumber, or the privilege of keeping a billiard table for gain. Such privileges are usually granted for a specific period of time, as for a year, a month, or a day. The greater number are issued for a year. With *permits* are included privileges granted for the performance of some specific act, the nature of which is exactly defined, and the performance of which terminates the grant; as permits for the erection of buildings, the making of connection with sewer and water pipes, the moving of buildings, the burial of the dead, and the like.

Both licenses and permits are issued quite generally to assist municipalities in enforcing compliance with regulations and ordinances for the preservation of public morals and the protection of life, health, and property. This object, as a rule, is more readily perceived in connection with permits than with licenses. Of privileges issued chiefly for enforcing police regulations and classed in the census report as licenses, mention should be made of dog licenses, good for a year; and permits to minors under the curfew laws, also good for a year. The one first mentioned is placed in a class by itself, and the latter is included under the designation *general licenses.* In the class last mentioned are also included licenses associated with pleasure or recreation, such as those for hunting or fishing.

Receipts from permits are sometimes only nominal, the amount collected being barely sufficient to cover the cost of issuing and recording them and of supervising the exercise of the privilege granted. From this fact some writers on public finance would classify them as fees. To permit students of the subject to make such disposition of them in their analysis of the Census report, if such should be their desire, is the principal reason for tabulating the receipts from permits separately from those received from licenses.

Penalties, fines, and forfeits, which are among the minor sources of the general revenues of cities, are all collected as punishment for failure to obey civil and criminal laws and local ordinances, and hence might all be termed *penalties*, in the broadest meaning of that word. Receipts from penalties include those collected by reason of the failure of taxpayers to meet their taxes within the time required by law, and all fines collected in criminal courts, and forfeits in criminal and civil transactions, such as forfeits in criminal bonds, forfeits in contractors' bids, etc.

The terms *gifts*, *contributions*, and *grants* are used to designate the gratuitous revenues of cities—all of which are tabulated by the Bureau of the Census under general revenues.

Receipts from commercial revenues.—As already explained, the commercial revenues of a municipality comprise the income from municipal investments, municipal industries, and municipal services. The receipts from *municipal investment income* include the rent, interest, or dividends received from real estate or securities held by the government as an investment. The receipts from *municipal industrial income* are classified with respect to the industry from which they are derived (waterworks, electric light works, etc.). Under receipts from *municipal service income* are included *special assessments.* These latter are compulsory contributions levied under the taxing or police power of the municipality to defray the cost of a special public improvement or public service undertaken primarily in the public interests. They differ from taxes in being apportioned according to the assumed benefit accruing to the individual for whom the service is performed, or according to the assumed increase in the value of the property affected by the improvement. The receipts from municipal service income *other than special assessments* are subdivided, according to the office by which the service is furnished, into the following groups: (1) General administration, (2) public safety, (3) public charities and corrections, (4) public highways and sanitation, (5) public education, etc., (6) public recreation, and (7) miscellaneous.

The above is a classification, mainly from the administrative standpoint, of the receipts from commercial revenues. These receipts may also be classified with reference to their typical form or character. So classified they are frequently referred to in popular language, in the technical works of accountants, and in legal enactments and municipal accounts as *prices*, *fees*, *charges*, *special assessments*, etc. These receipts all represent compensation for commodities or services sold or special benefits conferred by the municipality.

Price is the general designation which writers on public finance give to compensation for services or commodities sold by the government.

The compensation for a service or commodity sold by a government in the same way that a private individual would sell, is referred to by writers on public finance as a *quasi private price*, while the compensation for a service or a commodity furnished by a government primarily for the special benefit of the individual, but secondarily in the interest of the community, is by them designated as *public price.*

Public prices are of three distinct classes: They may be (1) what is designated in the commercial world as *monopoly* prices, representing more than the cost of the service or commodity furnished; (2) prices established to cover cost of service or commodity; or (3) prices where the commodity or service is provided at less than cost. In the first case the price

includes a *tax*, and in the second and third it approximates a *fee*. In the first the service or commodity furnished assists in collecting a tax as a contribution to general revenue, and in the third it is in part paid for from such revenue. In all cases of public price the free contractual relations of private life are modified by the monopoly exercised by the municipality. The distinction above given between quasi private and public prices, as well as those mentioned in referring to the three classes of public prices, though valuable from the standpoint of the student of public finance, can not at the present time be made of any practical value in the domain of municipal statistics.

Of sources of municipal revenue that involve the element of price, mention is made of *sales*, *interest*, *rents*, *privileges of various kinds*, *sales of such privileges*, *privilege rentals*, *labor*, *manufactures*, *rates*, and *tolls*. Of the foregoing, sales, interest, and rents generally come within the definition of *quasi private* price, the others within that of *public* price. The prices met with in connection with municipal investments are, therefore, *quasi private;* those in connection with municipal industries more largely *public*, and those in connection with municipal service income quite variable, depending much upon the nature of the municipal services rendered by each individual city.

In tabulating the receipts from sources involving the element of price the Bureau has observed the following distinctions:

Under *sales* are included the sales of real estate of the city, the sales of securities belonging to the sinking, investment, and public trust funds, and the minor sales by the municipal departments and industries of their discarded equipment, and of material discarded in connection with the different activities of the city.

Under *interest* and *rents* are included all receipts of cities corresponding to those commonly so designated in private finance. It has already been stated, however, that receipts from so-called interest levied on account of nonpayment of taxes at the time required by law are tabulated not as interest, but as penalties.

Receipts from public service privileges include all periodical receipts, other than general and special property taxes, which are collected from individuals or corporations enjoying the special privilege of using the streets and alleys of cities for providing some public service, such as that furnished by street railroad, subway, electric light, telephone, and water companies.

All receipts from individuals and corporations in payment for public service privileges sold outright are designated receipts from *public service privilege sales*.

The receipts derived from *public service privileges* and *public service privilege sales*, which are commonly spoken of as taxes, differ from taxes in being payments for *services* and also, in the majority of cases, in being voluntary or contractual instead of compulsory. When, however, a payment made by a public service corporation to a city is in lieu of all taxes, or is levied upon franchises classed as property, and at the same rate as other taxes, such payment is included among general or special property taxes; where the amount so included is known, it is given in the text accompanying the tables.

Under *privilege rentals* are included all periodical receipts from licenses, other than those defined above as receipts from *public service privileges*, which grant, in addition to the privileges usually bestowed by such instruments, the use or enjoyment of, or right upon, some property of the municipality, as the streets, parks, or public buildings.

Receipts from minor privileges include all periodical receipts collected without the granting of a license, from those enjoying special privileges in or upon the public highways, other than receipts derived from *public service privileges* and *public service privilege sales*.

All receipts from minor privileges sold outright are designated *receipts from minor privilege sales*.

It is to be noted that practically the only respect in which *minor privileges* and *minor privilege sales* differ from *privilege rentals* is that a privilege rental always involves the issuing of a license, while in the other cases no such papers are issued.

All receipts included under *labor*, *manufactures*, *rates*, and *tolls* are derived from services or commodities furnished by municipal industries. Receipts from *labor* include the receipts from personal service rendered by convicts in penal institutions and by inmates of charitable institutions. Receipts from *manufactures* include the receipts from the sale of articles manufactured in penal and charitable institutions. Receipts from *rates* include all payments for water, gas, electric light, and other utilities furnished by municipal industries. The word *toll* has been used exclusively to designate the specific charges made for toll bridge and ferry passage across streams and harbors.

Fees and *charges*, as distinguished from taxes, are compulsory contributions of wealth which are exacted from persons, natural or corporate, to defray a part or all of the expense involved in some *service* rendered by the government.

The greater portion of the amounts classified by the Bureau of the Census as fees are for services performed only by the government. They are mainly clerical in character, and their cost is so well established that the payments therefor, which are made in advance, and which, like receipts from permits, are often only nominal, are fixed by statute or ordinance establishing a scale of fees.

In contrast with the foregoing, the amounts classified as charges generally represent payments for services which are similar in character to those rendered by one individual to another in private life, and are, as a rule, other than clerical in nature. With few exceptions, the amounts to be charged for such services

are definitely established only upon completion of the work or service. Among services performed by cities and paid for by charges are the making of connections with sewer and water pipes and the removal of snow from sidewalks.

In passing it should be mentioned that a great proportion of the receipts from "fees" and "charges," as tabulated by the Census, approximate, if they are not identical in character with, those to which is given above the designation of "price." However clear in theory may be the distinction between these two classes of revenue, in practice they so merge one into the other that no hard and fast line separating them has been found practicable, any more than it has been possible to distinguish between a public and a quasi private price. Diverse public policies in different cities change the actual character of the payments for any given service, as has been pointed out by Prof. E. R. A. Seligman and other writers. The payment that is a *price* in one city is a *fee* in another, or the reverse.

This fact should be kept in mind in any study of the receipts tabulated in Tables 28 and 29 as from charges.

Temporary payments and receipts.—Temporary payments and receipts of a municipality are those which are not connected in a vital way with the aggregate activities of its various departments and industries. They are of three general classes:

(1) The first general class of temporary payments and receipts are met with in revenue and expense accounts. They are the payments in those accounts that represent no part of the cost of municipal operation or maintenance, and the receipts which constitute no part of the contributions from revenue for meeting such costs. There are three subclasses: (*a*) Payments by and receipts of the city in correction of error, to which the Bureau of the Census applies the specific designation "refunds," and the previous counterbalancing receipts and payments in error; (*b*) receipts from any interest on city bonds sold that has accrued at the time of sale and the counterbalancing payments at the next interest settlement; and (*c*) payments by sinking, investment, and public trust funds of interest on investments purchased that has accrued at the time of purchasing and the counterbalancing receipts at the next interest settlement.

(2) The second general class of temporary payments and receipts are those that are met with in the purchase and sale of investments and fixed assets and in loan transactions. They are payments and receipts which neither add to nor lessen the aggregate assets or liabilities of the municipality, but merely change the form or evidences thereof. There are three subclasses, as follows: (*a*) Receipts from the sale of and payment for securities or other property purchased on investment account by sinking, investment, and public trust funds; (*b*) receipts from the sale of bonds or other evidences of municipal indebtedness and counterbalancing payments of equal amount for refunding or redeeming outstanding obligations; (*c*) receipts from the sale of a fixed property, as real estate, and the counterbalancing payments for the purchase of other properties, or deductions therefore made on the balance sheet from the aggregate value of fixed possessions.

(3) The third general class of temporary payments and receipts are those made or taken by the city acting as agent or trustee for private individuals or for other civil divisions.

They include the collection and payment of taxes for other civil divisions and all payments and receipts in a private fiduciary capacity.

It should be noted that of the moneys received from special assessments or as deposits in payment for any service performed or to be performed by the city, either directly or through a contractor, only such amounts as are later returned to the contributors, and thus belong to class (1) mentioned above, constitute temporary or accounting receipts and payments; the amounts actually expended in payment for such service constitute corporate receipts and payments.

Balances for corporate uses and for temporary accounts.—The amounts in the treasury of a municipality at the end of any given year, thus available for meeting its expenses, outlays, or indebtedness, are designated by the Bureau of the Census as balances for corporate uses, while amounts available only for meeting temporary payments are called balances on temporary accounts.

In this connection attention is called to the fact that no attempt is made by the Bureau of the Census to report separately the balances on temporary accounts, because the entries appertaining to such accounts are frequently associated on city books with those relating to accounts with corporate payments and receipts, only one balance being shown.

Commercial surplus or deficit.—In the great majority of cities only a portion of the municipal investment income and the municipal industrial income is consumed in meeting the corresponding expenses. The surplus, which is available for meeting general expenses and outlays, may properly be referred to as *commercial surplus.* Similarly, the occasional excess of expenses over income may be designated *commercial deficit.*

Accounting debits and credits.—The accounting debits and credits of a municipality are the debit and credit entries on its books which do not represent actual financial transactions between the city and its creditors or debtors, but which arise from accounting requirements. The most common accounting debits and credits are those called *transfers.* Among others are those which record abatements of and discounts on such revenues as taxes and licenses and discounts on city securities sold.

Transfers.—The transfers of a municipality are the

financial transactions between its branches, departments, offices, funds, or accounts. A transfer always involves a credit entry in the accounts of one branch, department, office, or fund identical with a debit entry in those of another. Transfers may be divided into two classes, as follows:

(1) *Service transfers* are transactions between two branches, departments, offices, funds, or accounts of a municipality, in which one performs some service for another and receives pay or credit therefor. They include all labor furnished by one industry or department to another and all articles so furnished that are produced by such department or industry.

(2) *General transfers* are transfers of money, material, or credit between any two branches, departments, offices, funds, or accounts of a municipality not involving the performance of any services such as are associated with service transfers as above defined. Among general transfers are included the sale of city securities to the sinking, investment, or public trust funds; the sale of any securities or other property by one branch, department, office, fund, or account to another; and the payment of interest on, or the cancellation of, city securities held as investments by the sinking fund or by any other independent branch or fund of the municipal government. When special reference is made to the general transfers last mentioned, they may be designated as *interest* and *loan* transfers.

Both service transfers and general transfers may be divided into two subclasses—those between two independent departments or branches of the government, and those between minor offices or accounts of the same department. The first are designated "transfers between independent departments," the second, "transfers between minor offices."

CLASSIFICATION OF FUNDS.

The word *fund* is a common designation for an amount or an appropriation of money or other form of wealth.

As already explained, most of the funds created to assist in the administration of municipal finance and referred to as *administrative funds* are merely accounts with receipts from specified sources of revenue or with payments made in accordance with the terms of appropriations for specified objects. To funds of this description the term *administration* has been applied. There are certain other administrative funds which are received, accumulated, appropriated, or held subject to specified conditions and which possess characteristics so distinctive and important as to call for special definitions. These are designated as investment, sinking, public trust, and private trust funds.

Investment funds.—An investment fund is an administrative fund held for investment purposes only, and subject to no condition or obligation other than those usually met with in investments in private life.

In its tables for these funds the Bureau of the Census has included exhibits of all interest bearing securities and productive investments reported by cities other than those held by sinking and trust funds. In the same tables are included exhibits of all real property held by cities for investment purposes, and not as an asset of sinking or trust funds.

Sinking funds.—Sinking funds of cities are funds provided for meeting their interest payments and for the "sinking" or "amortization" of their public debt.

Public indebtedness for which sinking fund provision is made is known in legal decisions as "funded debt," as distinguished from indebtedness for which no such provision is made, and known as temporary, floating, or unfunded debt.

Governmental sinking funds were first established in England in 1716 by Sir Robert Walpole. As first established, their character is fully described by the definition already given. A few so-called sinking funds are met with in American cities which differ widely from the sinking funds of Walpole, but such departure finds little support in the decisions of American courts or in the definitions of law dictionaries. These conform substantially to the definition given above.

Originally all moneys for sinking funds were derived from specified taxes, imposts, fees, or other revenue pledged for meeting specified loans. The receipts of sinking funds of some of our American cities are not derived from such sources, but from moneys appropriated from the general revenues. Of the earlier type of sinking funds—those with receipts derived from specified taxes or other classes of revenue pledged thereto—the ones most generally met with in the United States are those whose receipts are all derived from the proceeds of special assessments and those which are created by law for meeting loans made in anticipation of taxes.

The sinking funds last mentioned, those created for meeting loans in anticipation of taxes, never have any invested securities, and those for meeting special assessment loans seldom have such investments. The assets of such sinking funds consist of the taxes and special assessments levied or authorized at the time when they are appropriated or pledged for such purposes, together with any cash which has been received for the payment of such taxes and assessments but not utilized for liquidating the loans. Taxes and assessments levied or authorized are in the technical language of accountants said to be "revenues accrued" and are held by the courts to be assets of the city. Loans for whose payment such "accrued revenues" are pledged are in American legal decisions viewed quite differently from unfunded loans or from funded loans for which a portion only of appropriated or pledged revenues are accrued. The making of an ordinary loan, either with or without sinking fund provisions, is held by the courts to add to the amount of outstanding debt within the

statutory and constitutional provisions limiting indebtedness of cities. On the other hand, the making of loans to be paid from the proceeds of special assessments is held not to increase such debt, provided only that the special assessment is ample for meeting the loan and is levied at the same time or prior to the authorization of the loan. In like manner, the issuing of tax certificates for meeting current expenditures, when the payment of such certificates is provided for by the pledge of taxes already levied, is not considered as adding to the city debt within constitutional or statutory limitations. Neither class of loans, in the opinion of the courts, increases the excess of debt obligations and other municipal liabilities over current assets, or decreases the excess of the opposite character, if such exists.

The decisions above referred to should be kept in mind in all investigations relating to the character of outstanding municipal loans and the effect of their issue upon the limitations of the city's right to borrow money. Those decisions do not, however, make it necessary to place a special fund pledged for the liquidation of a loan in any class other than that which for two centuries has been known as sinking funds, and hence, so far as statistics relating thereto were secured, the Bureau of the Census has treated these funds as sinking funds. In this connection, however, mention should be made of the fact that the agents of the Bureau seldom made separate report for sinking funds of either class above mentioned that had no invested funds and never so reported them if they had neither cash balances nor invested funds. Under these circumstances the statistics of but few sinking funds of the second class are included in the tables of this report.

Originally the receipts of all sinking funds were invested in productive assets, and in most American cities this is still true. In a few, as Washington, D. C., the accumulated moneys are employed solely in purchasing debt obligations of the city in the open market and canceling the same. In other cities the sinking fund is such in name only, with small or no invested resources. Among the cities making use of investments the securities most commonly purchased are the debt obligations of the purchasing municipality. The extent of this custom is indicated by the fact that of the $291,262,802 assets reported at the close of the fiscal year 1903 by the sinking funds of the 175 cities containing over 25,000 inhabitants, $251,396,061, or 86.3 per cent, represented obligations of the holders. Such investments really constitute a reduction of municipal debt, even though the sinking fund officials have no authority to cancel or destroy the purchased obligations before maturity. In some states this fact is recognized in the laws relating to the municipal power of incurring debt.

Public trust funds.—Public trust funds of cities are those which have come into their possession or control, the principal or income of which is to be used for what the courts denominate "charitable uses," such as education, religion, charity, objects of public benefit, including the care of public lots in cemeteries, etc.

Two methods of administering public trust funds are followed by American civil governments:

(1) Some cities and other civil divisions, having accepted money in trust, turn it into the general treasury, where it is treated like any other moneys. An account is opened with this money, however, just as in the case of all administration funds. If, under the terms of the trust, the moneys received are to draw interest, the same is paid from the general revenue of the city, the amounts so paid being transferred on the books of the treasurer or comptroller from the account of the general revenue or other appropriate fund to that of the particular trust fund. In like manner, if, under the terms of the trust, any or all of the principal or income is to be paid out, the order therefor is drawn on the treasurer and charged to the proper trust account.

(2) Some cities keep all the assets of trust funds entirely separate from those of the general treasury, no entry concerning such receipts or payments ever being made in the general accounts of the city.

Most American cities neither keep separate and detailed accounts nor make separate reports of public trust funds, the principal of which is to be expended for charitable uses. This is notably true of state contributions to cities for the support of schools, and of many private contributions for charitable uses. The cities merely show in a general way by their accounts that they have expended for the designated object an amount in excess of the trust receipts therefor. In the case of the more permanent public trust funds, however, quite detailed reports are presented, either as a part of the general treasury report, or distinct therefrom, according as the city follows the first or the second of the methods of administration outlined in the definition of trust funds. The reports of the Bureau of the Census only take account of those public trust fund transactions of which the cities themselves keep detailed account.

Private trust funds.—Private trust funds of cities are those which consist of money or other property belonging to private individuals or corporations or to other civil divisions and held temporarily by the city as trustee for the owner and for his benefit, and not for meeting municipal expenses, outlays, or indebtedness.

The most common private trust funds are estates of deceased persons held awaiting the discovery of heirs; moneys erroneously paid the city and awaiting repayment as refunds; moneys paid to the city and held by it as agent; and moneys deposited, subject to specified conditions, as guarantee of the faithful fulfillment of contracts.

Most private trust funds are of a very temporary nature and do not involve any special investments by the city. Whether the money belonging to them is kept separate or as a part of the general cash of the city, they call for a general accounting allied to that bestowed upon the ordinary administration funds or accounts already referred to. The city books merely show the receipts and payments, debits and credits of these funds. There are, however, a few private trust funds the principal of which is invested separately, as are the assets of the more important sinking and public trust funds. While there is no real difference in the character of these two classes of private trust funds, for greater simplicity and ease in handling the data relating thereto the Bureau of the Census prepared a separate schedule for each class, and in referring to them calls those without fixed investments *private trust accounts* and those with investments *private trust funds.* In the tables of this report they are consolidated under the general designation *private trust funds and accounts.*

The Bureau of the Census has included among *public trust funds* all trust funds consisting of money or investments left to a city subject to the payment of stated private annuities for a limited number of years, after which the principal passes to the city; all funds the income of which accrues to the city for public purposes for a specified number of years, at the end of which term the principal reverts to the donor or his heirs or assigns; and all funds, the greater portion but not the whole of whose expenditures are for charitable purposes for which the city itself makes expenditures. All such trust funds may be designated as public trusts burdened with specific obligations of the nature of private trusts.

Trust funds.—Municipal funds, in which the character of administration and the objects for which all payments are made are determined by legal obligations of a trust nature, such as are met with in sinking, public trust, and private trust funds, are frequently referred to by city fiscal officers under the common or generic name of *trust funds.* Whenever a common term is necessary in referring to all these classes of funds, the Bureau of the Census makes use of the same designation.

It should be noted in this connection that the income or assets of sinking and public trust funds are used or held for meeting municipal expenses, outlays, or indebtedness, while those of private trust funds are not. As distinguished from *private trust funds* these two funds might, therefore, be appropriately designated as *corporate trust funds.*

TABULATION OF DATA.

Totals for municipalities.—To provide an exhibit of all "municipal" payments, receipts, and indebtedness, the Bureau of the Census secured for each city reports not only from the "city government," but from all corporations, commissions, boards, and offices acting independently. The data thus secured have been consolidated, and the aggregates are shown in the general tables of the report, thus providing means of comparing the cost of the various activities which are exercised solely through municipal governments. In this manner the payments and receipts of the several cities are shown as if paid out from and coming into a common treasury.

The activities most frequently intrusted to more or less independent branches of municipal governments are those connected with schools, libraries, parks, sinking funds, and public trust funds. In some cities one or more other activities, for which separate statistics are here given, are thus conducted. To show the differences existing in the corporate organizations of the several cities, there are presented in Table 19, for each city, the names of the coordinate branches of the municipal government, their principal financial transactions, and the aggregate of all. With more detailed and complete returns, it is hoped in future years to make this table a more satisfactory exhibit of the method pursued by the Bureau of the Census in consolidating from multiplex local records the totals included in its own reports.

In the great majority of cases in which the Census statistics represent the aggregate fiscal transactions of several coordinate and independent branches of municipal government, the territory under the control of each of these branches is the same. Occasionally, especially in the case of schools, the territory is somewhat larger, but there is usually very little difference between the population of the school district and that of the territory subject to the "city government."

Relation between reports of auditors and treasurers.—The Census tables present from the auditor's or comptroller's report a record of all payments of claims by warrants or cash during the fiscal year investigated. There are included among receipts from debt obligations issued, amounts equal to the face of all warrants issued during the year which are outstanding at its close. They also include among the payments for liquidation of debt all disbursements made by the treasurer during the year for warrants outstanding at the beginning. In this way the settlement of claims is always reported in the year when made, and cash payments and receipts are reported in the year when the money is disbursed or taken in. Thus, the Census report approximates in character the books of a business house which pays for goods and services in part by cash and in part by duebills and other forms of bills payable.

The extent to which the books of the comptroller or auditor of any given city differ from those of the city treasurer approximates the amount of outstanding warrants included in the exhibit of municipal indebtedness provided in Table 36. In the Census report the amount shown by the auditor of a city as the total

payments for the current year is increased by the amount of warrants of preceding years paid during the current year; in like manner, the amount shown by the treasurer as the total receipts of the current year is increased by the amount of warrants of the current year unpaid at its close. In the case of cities transacting business on an essentially cash basis, the only warrants outstanding at the end of the year are those issued in the closing days thereof; in most cities of this class these are very few, but in cities which on the last day of the year issue warrants in settlement of interest claims and in redemption of debt obligations due on the first day of the succeeding fiscal year, they often aggregate considerable amounts.

Classification of cities by population.—In all of the general tables of this report relating to financial transactions, assets, and liabilities, the cities are arranged according to the Census estimates of the population on June 1, 1903, the number assigned each representing its rank according to such estimates. The tables for 1902 give statistics for the 160 cities which had a population on June 1, 1900, of 25,000 or over. Those for 1903 present statistics for the 175 cities which, according to the estimates mentioned, had that population on June 1, 1903. The index numbers are the same for 1902 as for 1903. The omission of a city in 1902, unless otherwise specifically stated, is due to the change in the population basis on which the cities were selected for the investigations of the two years.

In Tables 19 to 44 the cities are separated into groups according to the estimated population on June 1, 1903. Group I includes 14 cities, with an estimated population of at least 300,000; Group II, 25 cities, with a population of 100,000 to 300,000; Group III, 43 cities, with a population of 50,000 to 100,000; and Group IV, the cities with a population of 25,000 to 50,000. In this classification the list of cities is the same in 1902 and 1903 for each group, except Group IV. In that group there is the difference which results from the fact that cities having over 25,000 inhabitants according to the estimated population of 1903, but less than that number in 1900, are, as already explained, included in the 1903 tables, but not in the 1902. Accordingly Group IV, which includes 93 cities in the one set of tables, includes only 78 of these cities in the other. To facilitate comparison the 1903 tables present totals for the cities—78 in Group IV and the 160 cities in all—covered by the 1902 statistics, as well as for the cities covered by the 1903 statistics.

Fiscal years.—According to the Bureau of the Census the fiscal year 1902 is, in general, the one having six or more months in the calendar year 1902, and thus most nearly coincident therewith. The data secured by the Bureau of the Census for each department and branch of municipal government are for a fiscal year shown as such in the local reports and records. Hence, although the data obtained are always for the fiscal year 1902, as defined by the Bureau of the Census, they may be for a period otherwise referred to in local reports. For cities with a fiscal year ending June 30—that is, having six months in each of the two years—the fiscal year taken is that ending June 30, 1903.

For municipalities whose functions are performed by two or more independent branches or departments having different fiscal years, the foregoing rule is observed for the general city government, while for the auxiliary or coordinate branches the fiscal year chosen is that most nearly coincident with the fiscal year of the general city government. To this last rule, however, one exception is noted: Where the close of the fiscal year of the general government falls between January 1 and June 30, 1903, the fiscal years closing next prior to June 30, 1903, are chosen for the subordinate branches. Where the fiscal year of any department of a municipality differs just six months from that of the general city government, the fiscal year chosen for that department is the one closing six months prior to the end of the fiscal year of the general government.

Table 19 gives the date of the close of the fiscal year 1902, as adopted for this report, for all branches or departments of each of the 160 cities in continental United States which on June 1, 1900, contained a population of 25,000 or over.

The general principles above set forth govern the selection of the fiscal transactions included in the tables for the fiscal year 1903.

Arrangement of general tables.—The general tables relating to municipal finance number 26. In arranging these tables two objects were kept constantly in view: To provide the maximum of information to students of municipal finance, and to present the data in a form that would enable local officials to detect all errors of the Census agents and so secure in succeeding years a correction of the imperfections in this compilation. The character and arrangement of these 26 tables may be briefly stated as follows:

Tables 19 and 20 are summaries of transactions and balances; the former presents the total receipts, payments, and balances classified for each city, by independent departments, branches, and funds; and the latter presents the total corporate and temporary payments to and receipts from the public, together with the total service and general transfers between independent departments, branches, and funds.

Tables 21, 22, and 23 present the detailed exhibits of the corporate payments for expenses and outlays, together with the temporary payments and transfers vitally related thereto. Table 21 is an exhibit of the payments for general and municipal service expenses. No attempt was made to separate the payments for these two classes of expenses, since the books of but few cities afford facilities therefor. Table 22 is an exhibit of the payments for municipal investment expenses and municipal industrial expenses. These are given

separately both for 1902 and 1903. Table 23 presents summaries of the payments for outlays classified by the subdivisions of municipal functions, as described on page 5. The Bureau originally planned to present these data in detail by individual offices, as is done for expenses in Tables 21 and 22, but, after consideration, the subject was not deemed of sufficient importance to warrant the additional space required. With the data at command no classification of outlays into general and commercial could be made, but the outlays for municipal industries are distinguished from all other outlays.

The temporary payments included in Tables 21, 22, and 23 are of two distinct kinds. First, the payments made in error in settlement of expenses and outlays, and later refunded. The amount of such refunds are separately shown in Table 30 as "receipts to correct errors." The second class includes accrued interest paid to the public in return for moneys previously received from the sale of city securities. These are shown in Table 21, but are deducted in the total for that table.

The transactions between the city departments and industries included in Tables 21, 22, and 23 are of two kinds, "service transfers" and "general transfers on interest account." The latter are all shown in Table 21, in the payments to the sinking, investment, and public trust funds for interest on city securities held by them. In collecting and tabulating the data on the schedules for 1902, service transfers were not included with the total payments of the individual offices and departments, as they were shown on the city books. The failure to include them was unfortunate, making it impossible to give in the tables a true exhibit of the cost of maintenance of the departments or offices paying for such transfers. To correct this defect the schedules and Tables 21 and 22 for 1903 included these payments in the payments for individual offices, as well as in the total of all payments. The same variation is met with in Table 23, "payments for outlays."

Tables 24, 25, and 26 are arranged primarily to exhibit the receipts of cities from "general revenue" and the temporary receipts that are intimately associated therewith.

Table 24 presents an exhibit of all receipts that are popularly designated as taxes. It includes those designated by the Bureau of the Census as property, business, and poll taxes, and certain others which are popularly known as "franchise" taxes, but which on analysis appear to be payments for privileges, and thus commercial and not general revenues. The table also gives an exhibit of all taxes collected by the fiscal officers of the city, acting as city officers, for other civil divisions; such tax receipts are not corporate, but temporary. These temporary tax receipts, together with commercial revenue receipts from privileges, are given in the same table with corporate receipts from taxes in order to enable local officers to make a more complete and ready check upon this, the most important single part of this report.

Table 25 for 1903 presents an exhibit of receipts by the city for itself and other civil divisions from licenses and all minor compulsory general revenues. Owing to the imperfections of the schedules used in 1902, the receipts from permits were included with those from municipal service income and are tabulated in Table 29. Similarly, the receipts from fees, properly belonging in Table 29, were separated therefrom for mechanical reasons and included in Table 25. To this extent the imperfection of the schedules for 1902 mars the symmetry of Tables 25 and 29 for that year.

Table 26 includes the general revenues which may be designated as "voluntary," in contrast to the "compulsory" revenues included in Tables 24 and 25. They are the receipts from governmental and private contributions and gifts. For a few cities Table 26 includes, under the designation "miscellaneous," certain revenue receipts which can not readily be classed in any other division of the tables.

The only temporary payments included in Tables 24, 25, and 26 are taxes, licenses, etc., collected for other civil divisions, and refunds—amounts received in error and later refunded. No separate statement of refunds of general revenue is shown in the tables, but they constitute practically the aggregate shown in Table 30 as "payments to correct errors."

Tables 27, 28, 29, and 30 present exhibits of the various classes of commercial revenue.

Table 27 is an exhibit of interest receipts or receipts from municipal investment income.

Table 28 is an exhibit of the receipts of municipal industries or municipal industrial income.

Table 29 is an exhibit of those receipts from municipal service income which are available for meeting municipal service expenses, as distinguished from outlays. The imperfections of this table for 1902 have already been pointed out in the comments relating to Table 25.

Table 30 has for its principal receipts the municipal service income derived from special assessments for outlays for special or local improvements. In addition, there are given in this table, for mechanical reasons, a number of temporary payments and receipts for both years, representing refunds and receipts from sales of real estate, and payments of taxes, licenses, etc., to other civil divisions. In addition, in 1902 there were given under miscellaneous temporary payments and receipts a portion of those that should have been included in Table 31, as was done in 1903. Through inexperience the agents in 1902 failed to secure any separate report of the balances held to the credit of such funds at the beginning and close of the year, such balances being included with that of the general city cash.

Table 31 for 1902 and 1903 gives reports of the transactions and balances of private trust funds and accounts. The report for 1902 is more or less imperfect, owing to the facts mentioned above in connection with Table 30. Such imperfections were largely corrected in 1903. The errors, if such there be, of the report for the later year arise from the fact that some cities do not carry any separate accounts of such funds, thus rendering a perfect report impracticable.

Tables 32, 33, and 34 present detailed exhibits of the transactions and balances of sinking, investment, and public trust funds.

Table 35 is an exhibit of the transactions relating to the public debt and the amount of such debt outstanding at the close of the year.

Table 36 presents detailed data relating to the classes of such indebtedness, as arranged by the Bureau of the Census.

Table 37 is an exhibit of the principal realizable possessions of the cities.

Table 38 presents an exhibit of the assessed valuation, basis of assessment, tax levies; per capita assessed valuation, tax levy, and debt.

Tables 39, 40, 41, 42, 43, and 44 present summaries of total payments and receipts, classified by municipal functions and per capita payments and receipts, showing the relative cost of the principal departments and the relative receipts from the principal sources of revenue.

USE OF DATA FOR COMPARISON.

A glance at the tables presented in this report, especially those giving per capita payments and receipts, discloses great variations among the several cities. These variations are of three general classes: (1) Those which represent the varying liberality or parsimony exercised in municipal administration, or, in a general way, the degree of effectiveness of governmental activity; (2) those which represent differences in the distribution of specific governmental functions between the city, county, state, and other civil divisions; (3) those which reflect the degree to which the several municipalities have assumed control of functions originally performed by the citizens for themselves.

Among the variations most generally due to the first cause are those in receipts from taxes and other sources of general revenue and in payments for expenses and outlays connected with streets and sewers, with the management of the police, fire, and health departments, with schools, and with the general city administration.

Of the variations in tables due to the second class of causes, special attention is directed to those in the statistics of courts and of payments for the care of the defective, delinquent, and criminal classes. In some cities all expenses for these purposes are borne by the city government, while in others they are supported or shared by the county or state government. As a result the per capita payments by the two classes of cities for the objects mentioned differ greatly, but the variation marks no difference in the efficiency of administration but merely a difference in the agencies supporting the functions concerned. In the case of a few variations of this class an effort has been made to present data to assist in determining the relative or comparative cost of municipal services or activities. The most important of such variations are those arising from the difference in local laws governing the administration of schools. In most cities the schools are under the control of the city government, or of a school district, practically coterminous with the city.

In a few cities with over 25,000 inhabitants, and in a large number of smaller cities, the schools are under state or county control. All the money expended in erecting schoolhouses and in conducting schools is raised by a uniform state or county tax, or is otherwise provided by the state or county, the city having no direct voice in determining how much money it will contribute for maintaining the local schools. Such payments for schools are not treated by the Bureau of the Census as municipal payments, and no effort is made to include them in the general tables. But to assist the student of municipal finance in making specific comparisons of the payments for school purposes within the limits of different cities, the Census has secured statements of the county and state payments for schools within the limits of cities such as those above described; these statements will be found in the text relating to schools.

Of variations of the third class, attention is called to the following: Some cities show relatively large payments for the removal of garbage, the sprinkling of streets, the construction and maintenance of sidewalks, and kindred services and improvements. Other cities pay but small amounts from their treasuries for these purposes. The difference arises from the fact that the cities first referred to have assumed the entire responsibility of performing these services, while in the others the responsibility rests with the individual citizens independent of the municipal government.

Statistics of payments for police service sometimes reflect the influence of the same factor. A few cities provide a police force so large and efficient that there is but little necessity for individual firms and corporations to maintain private watchmen and guards. In other cities the number of policemen on the pay rolls is comparatively very small, while large numbers of private watchmen are maintained by business men and firms.

In like manner some cities provide their citizens with water, light, markets, and kindred facilities, the receipts therefrom constituting a large proportion of the municipal income, while in others all such utilities are supplied by private agencies.

Again, a relatively small expenditure for libraries does not necessarily represent a lack of service to the

public, for the same may be rendered by private institutions supported by endowment or otherwise.

The tables show all payments determined by the citizens of the municipality acting in a self-governing capacity—that is, they show the amounts paid by the municipality to private institutions and to institutions of other civil divisions, as well as those paid to institutions under the direct control of the citizens, but do not report any amounts independently expended for the benefit of the citizens of the city by other civil divisions or by private agencies.

The same general principle is reflected in the statistics relating to payments for parks and pleasure gardens.

The fact that the activities which give rise to the first and third groups of variations above referred to, so far as they have been taken over from private management, are always more or less fully under the immediate direction of the city government, has led many writers on the subject to speak of their maintenance and control as purely municipal functions. The same writers frequently refer to the control and supervision of those activities which give rise to the second group of variations as state functions, which may or may not be delegated to municipal governments. From the standpoint of these writers the variations of the second class shown in the payments included in the tables of this report represent, principally, the extent to which the state has delegated the exercise of these functions to the several municipalities; and for the other groups they show, primarily, the extent to which the municipality has taken over from the citizens the exercise of the functions involved, and, secondarily, the efficiency of the service rendered or the waste of public money permitted in connection therewith.

With so many factors producing variations in the data presented, great care should be exercised in drawing definite or final conclusions therefrom. When a difference is disclosed by the tables the first thing to be ascertained with reference thereto should be, whether it represents a difference in the distribution of governmental functions and activities or a difference in the cost of local administration, and if the latter, the reason for such difference. It is hoped and believed that the form in which the data are presented will greatly assist the student of public institutions and public finance in arriving at the correct interpretation of all variations and anomalies found in the tables. Only so far as this is the case will a complete comparison of municipal expenses and of methods of administrating public functions and activities, which is the principal object of the Census investigation of municipal finance, be facilitated.

DESCRIPTION OF GENERAL TABLES.

Table 1.

Population and area, with date of latest incorporation.—This table gives for each city the population enumerated at the Federal censuses of 1890 and 1900 and the estimated population for 1901, 1902, and 1903. The estimates are those adopted and used by the Bureau of the Census whenever it is necessary to compare data collected in intercensal years with the contemporary population, as in the computation of death rates or of per capita statistics. For this purpose it is assumed, in the absence of any state census, that the annual increase of population since the last Federal census is equal to one-tenth the decennial increase between the last two Federal censuses.

When there has been a state census the returns of that census are accepted for the year to which it relates, and estimates for other years are made by applying the annual increase as determined by a comparison with the Federal census.

Allowance is made for the changes in population produced by the inclusion of new territory in the corporate limits of the municipality, or by the detachment of territory formerly included.

The area, as given in Table 1, is the number of acres included within the limits of the city on June 1, 1903, subdivided, wherever possible, into land and water area; the "date of latest incorporation" is the date of the charter under which the affairs of the city were administered at the time to which this inquiry relates.

Table 2.

Police and arrests.—This table shows the number of employees in the police department and the number of arrests. The employees are classified according to the character of their work. Patrolmen and officers, as the expression implies, include roundsmen, sergeants, lieutenants, etc. Special policemen, watchmen, etc., include market masters, city employees, guards for chain gangs and cemeteries, custodians, sentinels, court bailiffs, temporary appointees as sanitary inspectors, school janitors, and others with limited police powers. Park policemen and supernumeraries, substitutes, and reserves are defined by their titles. "Other employees" include messengers, janitors, drivers, matrons, clerks, police telegraph operators, surgeons, etc. In Baltimore the clerical and miscellaneous force of the police department is classified under patrolmen and officers, since, in accordance with the law, the members have full police powers and may be called upon to serve as patrolmen, if necessary. In Washington, D. C., desk sergeants are included under "other employees," since they are not subject to patrol duty. In other cities they are included with "patrolmen and officers."

The arrests are classified as to the causes for which persons were arrested, as drunkenness, including all arrests for drunkenness; disturbing the peace, including all cases of disorderly conduct not attributable to drunkenness; assault and battery, including all cases of assault; homicide, including murder, manslaughter, etc., or complicity in the same; vagrancy, including arrests of beggars, tramps, loafers, and all persons without visible means of support; housebreaking, including burglary and all kinds of breaking and entering; larceny, including both grand and petty larceny, pocket picking, robbery, etc.; and "all other offenses," including arrests that can not be classified under one of the preceding heads.

TABLE 3.

Number of retail liquor saloons and amount and apportionment of license fee.—This table gives the number of retail liquor saloons in 1903 and in 1902, with the total amount of the license fee, if any, and the amount or proportion paid to the city, county, or state. The facts in regard to license fees, as given in the third and fourth columns of the table, apply to both years, 1902 and 1903, unless otherwise stated in the footnotes. Since the state laws regulating the liquor traffic usually introduce a certain degree of uniformity as regards the amount and apportionment of licenses in the different cities of the same state, it was thought best for the purposes of this table to arrange the cities by states instead of adopting the order of size followed in other tables.

TABLE 4.

Firemen, fire equipment, and property loss from fires.—The number of employees in the fire department of each city is given in this table. The firemen, including the officers in the different grades, are classified as regulars, callmen, and volunteers. "Other employees" include superintendents (of fire alarm, machinery and shops, construction, apparatus, hose, horses), medical and veterinary officers, secretaries, stenographers, messengers, purchasing officers, storekeepers, clerks, porters, examiners, foremen of shops, engineers, machinists, firemen (boiler), mechanics, blacksmiths, wheelwrights, electricians, linemen, batterymen, carpenters, painters, repairers, hydrantmen, watchmen, draymen, hostlers, grooms, laborers, captains of fire boats, pilots, and fire marshals (nonuniformed men) in Detroit, and firewardens in Duluth. The details relative to the equipment of the fire department, as given in this table, include the number of steam, chemical, and hand engines, fire boats, hand fire extinguishers, and combination chemical engines; the number of hook and ladder trucks, hose reels, and hose wagons, with the length of the ladders and the length of the hose in feet; the number of fire hydrants, cisterns (comprising reservoirs, cisterns, tanks, and wells used for fire purposes only), and water towers; the number of horses; and the number of fire alarm boxes. Finally, the table gives the number of fire alarms and fires, and the property loss. The number of fire alarms includes second, third, general, and special alarms. Each of these alarms calls out a separate or additional portion of the fire department, and in the printed city reports is usually included in the total number of alarms. In ascertaining the number of fires, however, the second, third, general, and special alarms are not counted, nor are any additions made because of the number of buildings burned, each fire, no matter how great its extent, counting as one fire only.

TABLE 5.

Public schools and teachers.—This table shows the number of buildings and rooms used for public school purposes, distinguishing the buildings and rooms owned by the city from those rented. The number of public high schools includes those occupying rooms in the same building with a grammar school as well as those occupying separate buildings. These data are followed by the number of teachers in each class of schools. Care has been taken to eliminate from this report denominational or parochial schools and all other schools that are not strictly public schools. "Other regular day schools" include grammar schools, primary schools, and all other regular divisions of public schools not specifically designated as high schools or kindergartens. "Other public schools" include schools for the deaf and blind, teachers' training schools, and special schools of this character that do not seem to conform in every respect to the ordinary idea of a regular day school. But there are cases, doubtless, in which, owing to the character of the return and the lack of printed reports with which to verify the return, some of these special schools are included with "other regular day schools." No attempt has been made to include summer schools and vacation schools in any class, as the reports for such schools are very incomplete.

TABLE 6.

Pupils in public schools.—This table shows the number of pupils and the average daily attendance in the public schools of each kind. The number of pupils as shown in the table is the total number of different pupils registered during the year. Pupils who have been transferred from one school to another, and whose names consequently appear on the rolls of two or more schools, have been counted but once, so far as it has been possible to eliminate such duplications. The classification of the public schools is the same as that in Table 5.

TABLE 7.

Public libraries.—In this table are presented statistics relating to public libraries—the number of such libraries, the number of volumes in the same, the num-

ber of volumes added during the year, the number of volumes withdrawn for home use, and the number of volumes withdrawn for use in the reading rooms of the library during the period covered by this report. Although municipal public libraries, strictly speaking, should include only those that are owned and controlled by the city, yet many libraries that were created by endowment or gift and are supported either by voluntary subscriptions or by funds provided by the donor subserve the same purpose as public libraries proper, being in all respects free libraries, open to all residents of the city. Therefore such libraries are included in this report, on the assumption that in many cities they take the place of the municipal libraries. School libraries that are open to the general public are considered as municipal libraries. So far as possible the number of volumes added during the year shows the aggregate accessions to the library without reference to the books withdrawn, lost, or destroyed. The returns for the number of volumes withdrawn for use in the reading rooms are unsatisfactory, as many libraries report the open shelf system and others that no records are kept.

TABLE 8.

Almshouses and hospitals.—This table shows the number of municipal almshouses, with the average number of inmates, and the number of municipal hospitals, with the number of patients treated. Although in the past the statistics have not always been confined to strictly municipal institutions, they are limited in this table as far as possible to charitable institutions, strictly municipal in character. It is probable that some institutions are reported that do not exactly conform to the requirements of a strictly municipal institution, and it is equally probable that some strictly municipal institutions are omitted. The hospitals for contagious diseases given in the footnote include smallpox hospitals, pesthouses, isolation hospitals, diphtheria hospitals, leper hospitals, and detention hospitals.

TABLE 9.

Water, gas, and electric light plants.—This table includes only those waterworks, gas works, and electric light plants which are owned or controlled by the city. Municipal gas works were reported by only 7 cities in 1903 and 5 in 1902; municipal electric light plants were reported by 23 cities in 1903 and 19 in 1902. There are comparatively few of the cities covered by this investigation that do not have municipal waterworks. Where these public utilities are owned or operated by the municipality, the table gives the year in which they were built, and also the year in which they were acquired by the city in case they were not built by the city, and the cost of the same. The figures for cost represent the cost up to the end of the fiscal year covered by the reports, and include the amounts expended for extensions, etc., in addition to the original cost of building and equipping the plants. The returns as to cost, however, are not altogether satisfactory, as in some cases no records could be found showing the primary cost of the plant, which was probably built originally by a private corporation, and in other instances no records are kept of the extensions and improvements. Therefore, in some cases the figures represent the present estimated value instead of the cost, the depreciation of the plant having been deducted and interest charges and maintenance having been considered. The number of miles of mains for water, gas, and electric lights is also shown in the table.

TABLE 10.

Street lighting.—Table 10 gives the number of arc and incandescent electric lights, the number of Welsbach and other gas lights, and the number of vapor lamps and oil lamps in use in the streets, alleys, and public parks of each city. Lights inside public buildings are not included.

TABLE 11.

Area and length of paved streets and length of unpaved streets and area of public parks.—This table shows the total area, in square yards, of the paved streets, and the total length, in miles, of the paved and of the unpaved streets. It shows also the area and length of streets paved with each of the specified kinds of paving, including cobblestone, granite and Belgian block, brick, wooden block, asphalt and asphalt block, macadam, gravel, and "all other."

The returns as to the area of paved streets are far from satisfactory. Comparatively few cities keep records giving this information. The Department of Labor, when it began these investigations, attempted to secure the data, but found the results so defective that the inquiry was not continued after the first two years. It has been taken up again in response to the requests of engineers and others who desired to secure this information if possible. The results obtained are better than was anticipated, and it is believed that by continuing the inquiry in future years more complete and satisfactory data can be collected.

TABLE 12.

Disposal of garbage, cleaning of streets, sanitary inspection, and sewers.—This table presents data relative to the cleaning of streets and the disposal of ashes, garbage, and other refuse. It also gives the number of food and sanitary inspectors and the miles of sewers. In some of the cities for which no sanitary inspectors are given in the table, the work of sanitary inspection is performed by regular policemen specially detailed for that service. The total length of municipal sewers as given in this table includes main sewers and cross-street connections, but not house connections. The

different materials of which the sewers are constructed are specified wherever possible.

It is difficult to collect complete and accurate statistics in regard to the quantity of ashes, garbage, etc., collected and disposed of. The attempt was made to ascertain the number of tons. But in many cities the record was kept by loads; in other cities not at all. Estimates as to the average weight of a load of ashes or garbage differed very materially, and in all such cases the figures are only approximations. The returns as to the weight of dead animals removed during the year are also very deficient, many cities keeping no record of the weight.

There are many cases in which, as stated in the footnotes to the table, refuse is "disposed of by householders." The term "householder" not infrequently means property owners, rather than tenants, and when used in a note referring to the disposition of dead animals it generally means the owners of such animals.

The data relating to the care of streets show the number of yards of streets swept per week and the average number of persons employed in the work. In most cities many of the streets are swept more than once during the week, and in all such cases the total number of yards swept per week is not equivalent to the total area of the streets which are swept, but is considerably more than that. In the more northern cities snow or bad weather naturally interrupt the work of street sweeping during a portion of the winter months, thus reducing the averages for the year.

Table 13.

Building permits.—Table 13 shows the number of permits granted for the construction of new buildings and the total amount of the proposed expenditures, also the number granted for repairs or extensions to old buildings with the proposed expenditures. Because of the lax methods of keeping such records in some cities the statistics collected are necessarily incomplete.

Table 14.

Marriages and divorces.—In this table the attempt is made to give for the cities covered by this investigation the number of marriage licenses issued, the number of marriages reported, and the number of divorces granted. There are many cases, however, where no statistics are available for the city as distinguished from the county in which the city is located, all marriage licenses being issued by the county clerk or other county officer and all marriages being recorded at the appropriate county office. In such cases, the choice lay between giving figures for the county and giving none at all. The former alternative was adopted because it was believed that the county figures, although not entirely appropriate, were of interest in relation to the city, which contained a large part—in most cases more than half and in many cases more than three-fifths—of the county population. Moreover, by introducing county figures where city figures are lacking, this table is made to conform to the tables for previous years published in the reports of the Bureau of Labor. Even when the marriages and marriage licenses are those reported for the city only, they are by no means confined to residents of that city, many licenses being issued and marriages performed where neither party is a resident of the locality.

Whenever the figures given are for the county, that fact is indicated by a footnote.

Table 15.

Deaths.—This table gives for each city the total number of deaths and the number from each specified cause.

In collecting the data for this table a departure was made from the method followed by the Department of Labor, since, under the authority of section 8 of the permanent census act (March 6, 1902) providing for an annual collection of mortality statistics, a transcript of the record of each death occurring in registration areas had been secured and was on file in the Bureau of the Census. This made it unnecessary for the special agents to copy or compile returns from city records and permitted the entire preparation of the tables within the Bureau, thereby insuring conformity with the International (formerly Bertillon) Classification, which has been adopted for the Census mortality statistics and is given in full in the "Manual of International Classification of Causes of Death," published by this Bureau.

The tables presented, therefore, correspond, so far as the details given are concerned, with the results compiled for the regular annual Census reports on mortality statistics. They are, however, restricted to cities in which the registration of deaths is sufficiently complete and accurate to afford comparable results, and a few cities in which the records appear inadequate for the purpose have been dropped.

Being practically a repetition of results given in greater detail in the regular mortality reports of the Census Bureau, the data included here for convenience of comparison with the other statistics of cities are limited to the number of deaths and death rates from the most important causes.

Table 16.

Proportion of deaths from each specified cause.—This table, based on Table 14, shows what proportion of the deaths occurring during the year resulted from each specified cause. For example, out of every 1,000 deaths occurring in New York city in 1903, 9.5 were caused by typhoid fever, 1.1 by malarial fever, and 0.1 by smallpox.

Tables 17 and 18.

Death rate per 100,000 population.—These tables of death rates give the ratio of the number of deaths from each specified cause and the total number from all causes to every 100,000 inhabitants.

Tables 19 and 20.

Summary of transactions and balances.—Table 19, as previously stated, presents certain summaries of financial transactions, classified by independent branches or departments. The only data for individual cities that could be carried forward into the grand total are those for the municipality as a whole. The organization of the cities is so different that there is nothing comparable in the statistics of independent branches bearing the same name, with the exception of the permanent funds which are elsewhere summarized. Table 19 divides the transactions into two classes, those between the city and the public, and those between the various departments, designated "transfers." The accountants in the office of the comptroller of the city of New York refer to them as *inter se transactions.* In some respects this designation seems to be more appropriate than the word "transfers," which is adopted by the Census on account of its more general use by city officials throughout the country.

Table I, which follows, presents summaries from Table 19, showing the aggregate transactions and balances included in that table for the fiscal years 1902 and 1903:

Table I.—*Summary of financial transactions during the fiscal year and balances at the beginning and close of the fiscal year for 175 cities in 1903, 160 cities in 1903, and 160 cities in 1902.*

	Payments and payment transfers during year.[1]	Balances at close of year.	Balances at beginning of year.	Receipts and receipt transfers during year.[1]
175 cities, 1903 ..	$910,849,206	$110,457,038	$110,438,287	$910,883,928
160 cities, 1903 ..	900,151,838	109,319,114	109,638,135	899,848,788
160 cities, 1902 ..	822,931,218	109,112,385	113,020,649	819,003,484

[1] Exclusive of general transfers between minor offices and accounts.

An examination of the foregoing table and of Tables 19 and 20 discloses a number of apparent inconsistencies which call for special explanation. The cash balances reported for the 160 cities at the close of the fiscal year 1902 aggregated $109,112,385, and at the beginning of the fiscal year 1903, $109,638,135. This latter amount exceeds the former by $525,750. A detailed comparison of Table 19 for the two years shows that this excess is located in comparatively few cities, $436,049 being found in New York. The excess in some cases represents the cash belonging to funds or departments for which reports were secured in 1903, but for which the agents for one reason or another failed to make report in 1902, and in others, the cash belonging to civil divisions annexed to the city during 1903. The former very largely represents the properties of obscure private trust funds for which the records in the earlier year were in such shape that to compile a report would call for the expenditure of more labor than the agents were authorized to make.

In addition to the excess cash reported in Tables 19 and 20 at the beginning of 1903 over that reported in the corresponding tables for the close of 1902, those tables exhibit for some cities a number of other variations. As a rule, they all arise from consolidation and changes in departments made by the cities. A number, however, merely represent differences in the judgment of the Census agents as to the proper method of making reports. As a rule, the later report is the one to be preferred. A comparison of Table 19 for the two years will disclose all these differences.

In Table 19 investment, sinking, and public trust funds are uniformly treated as independent branches or departments of the city. For the very few cities which include the transactions and balances of their permanent funds with those of the "city government," the figures for that government, as given in Table 19, are less than those shown in the local reports by the amounts of the transactions and balances of these funds. This applies to any independent branch of government which includes reports of sinking, investment, and public trust funds with those of its general treasury. To make as condensed an exhibit as possible in Table 19, investment funds are included with sinking funds, although shown separately in Tables 32 and 33.

In comparing the balances and transactions of the sinking, public trust, and private funds, as given in Table 19, with those shown in Tables 31, 32, 33, and 34, certain variations will be noticed. In most cases these differences represent moneys held in the general city or departmental treasury that belong to these particular funds. Such moneys are given in the tables last mentioned as belonging to these funds, while in Table 19 they are shown as in the general treasury.

Another fact concerning the figures in Table I and those of Tables 19 and 20, for both 1902 and 1903, should be observed. The total of receipt transactions and balances at the beginning of the year does not equal the payment transactions and balances at the close of the year for the city of Pittsburg, Pa., for the group in which it is found nor for the grand total. This discrepancy arises from the fact that in that city the agents of the Bureau were unable to secure reports of the financial transactions during the year of a certain sinking fund. It represents the difference in the cash balances of that fund at the beginning and close of the two fiscal years.

Analysis of aggregate transactions.—Table 20 presents a more detailed analysis of the aggregate transactions of the cities than is contained in Table 19. The payments to the public are subdivided into corporate and

temporary, and the transfers into service and general. The general transfers could readily have been subdivided into (1) those included in the interest and security accounts of the sinking, investment, and public trust funds of the city, and (2) those included in other general transactions. The first represent the aggregate payments by the city to those funds for interest on city securities held by them, or for the redemption or cancellation of such securities, and also receipts by the general treasury from these funds of money in payment for city securities sold or issued to them, as well as payment for accrued interest on such securities, and transfer receipt and payment of securities between public trust and sinking funds. All of these interest and loan transfers are shown in Table 35 as well as in Tables 32, 33, and 34, with the exception of those last mentioned, the transfer of securities between the sinking and public trust funds, which is shown only in Tables 32, 33, and 34. Compiling these interest and loan transfers from Tables 32, 33, and 34, and separating them from the other general transfers of Table 20, the transactions given in Table I are found by analysis to represent the following subdivisions presented in Table II.

TABLE II.—SUMMARY OF FINANCIAL TRANSACTIONS DURING THE FISCAL YEAR, CLASSIFIED AS CORPORATE AND TEMPORARY PAYMENTS AND RECEIPTS, SERVICE TRANSFERS, GENERAL TRANSFERS, AND INTEREST AND LOAN TRANSFERS FOR 175 CITIES IN 1903, 160 CITIES IN 1903, AND 160 CITIES IN 1902.

CHARACTER OF PAYMENTS, RECEIPTS, AND TRANSFERS.	175 CITIES.		160 CITIES.			
	1903		1903		1902	
	Payments and payment transfers.	Receipts and receipt transfers.	Payments and payment transfers.	Receipts and receipt transfers.	Payments and payment transfers.	Receipts and receipt transfers.
Corporate	$535,804,200	$541,624,203	$529,149,487	$534,619,126	$474,527,893	$482,846,899
Temporary	229,464,163	224,735,309	226,502,981	221,771,657	208,824,288	196,645,795
Service transfers	2,198,723	2,166,013	2,159,118	2,126,408	1,211,986	1,211,986
General transfers[1]	57,767,418	56,743,701	57,060,991	56,052,336	80,398,578	80,330,331
Interest and loan transfers	85,614,702	85,614,702	85,279,261	85,279,261	57,968,473	57,968,473
Total	910,849,206	910,883,928	900,151,838	899,848,788	822,931,218	819,003,484

[1] Exclusive of general transfers between subordinate offices and accounts.

In 1902, 16.9 per cent of the total payment transactions were transfers or *inter se* transactions, and the balance, 83.1 per cent, represented transactions with the public. In like manner, of the receipts 17.0 per cent were transfers and 83.0 per cent transactions with the public. The percentage of transfers in 1903 did not greatly differ from that in 1902. It will be noted that the total transfer receipts in neither year exactly coincide with the transfer payments. This variation arises from two factors. Frequently, for two branches of the Government whose fiscal operations are consolidated in the tables of the report, the transfers reported by one branch do not agree with those returned by the other, since they are for different fiscal periods, the two reports overlapping one another. The second cause of variation is that even in cities where all departments have the same fiscal year, warrants or transfers drawn by one branch on the last day of a given fiscal year do not reach the other branch until the first day of the succeeding year. Hence the two reports do not exactly coincide for any given fiscal period. The difference between the total transfer receipts and transfer payments for 160 cities in 1902 may be noted from the fact that the former aggregate $139,510,790, and the latter $139,579,037, an excess of $68,247. The same general facts explain the difference in service transfers to be noted in the tables for 1903.

Corporate payments.—The corporate payments for 160 cities in the fiscal years 1902 and 1903, and for 175 cities in 1903, are summarized in Table III, which follows. In the analysis previously given these payments were classified as those for (1) general, (2) municipal service, (3) municipal investment, and (4) municipal industrial expenses; for (1) general and (2) commercial or special improvement outlays; and for reduction of debt. It was found impossible, without an unjustifiable expenditure of labor, to separate the payments for general expenses from those for municipal service expenses. These payments are, therefore, given together in Table 21, and also include with them interest payment on loans made in securing the fixed assets of municipal industries and investment of investment funds. In 1902 all such payments were consolidated in that table. In 1903 payments by public trust funds for purposes not specifically connected with regular departments and funds were not thus consolidated. They are given in Table 32 in the column for payments "for purposes of trust," "to public." These combined with the payments of Table 21 constitute the total payments for general municipal service expenses for 1903.

The payments for municipal investment expenses and municipal industrial expenses are given separately in Table 22. Table 23 presents the only summary of outlays that could be made from local records. It does not separate those payments into those for general outlays and commercial outlays, or outlays for special or local improvements, as called for by the scheme of classification previously outlined. The payments for commer-

cial outlays for any particular city in any given year may vary greatly from the receipts from special assessments for meeting such outlays, but for any group of cities or for the total included in the tables there is no great variation. For the cities summarized in these reports the payments for outlays may, therefore, be approximately divided into those for general or special outlays by subtracting from the total of Table 23 the receipts from special assessments given in Table 30. The remainder is an exhibit of the approximate payments for general outlays, and the receipts from special assessments represent approximately the payments for special outlays or local improvements.

The corporate payments for debt reduction are obtained from Table 35. They are the amounts in the column headed "from public" in division "excess of receipts over payments, exclusive of changes in sinking fund assets."

TABLE III.—*Classified summary of corporate payments during the fiscal year for 175 cities in 1903, 160 cities in 1903, and 160 cities in 1902.*

OBJECTS OF PAYMENTS.	175 CITIES.	160 CITIES.	
	1903	1903	1902
General and municipal service expenses (21)[1]	$329,742,757	$325,223,679	$318,365,353
General and municipal service expenses (32)	13,728	13,728	.....
General and municipal service expenses, total	329,756,485	325,237,407	318,365,353
Municipal investment expenses (22)[2]	441,386	440,047	143,605
Municipal industrial expenses (22)[2]	24,048,160	23,668,976	20,173,732
All expenses	354,246,031	349,346,430	338,682,690
Outlays (23)	177,221,875	175,587,957	129,955,059
Debt reduction (35)	6,264,191	6,134,415	6,797,552
Total expenses, etc.	537,732,097	531,068,802	475,435,301
Real property sales (30)	1,399,276	1,396,051	476,804
Corporate payments, including refunds (39)	536,332,821	529,672,751	474,958,497
Refunds (30)	528,621	523,264	430,604
Net corporate payments (20)	535,804,200	529,149,487	474,527,893

[1] Including also interest on loans for municipal industries and for municipal investments.
[2] Exclusive of interest on loans (included in Table 21).

The numbers in parentheses after the words in the first column of the above table indicate the general tables from which the data are taken or derived. The numbers taken from Tables 21, 22, and 23 are those from columns giving totals less service transfers. The deductions made of real property sales and of refunds are to eliminate duplications in revenue and capital account.

The municipal service income for meeting commercial outlays as given for 1902 in Table 30 was for 160 cities $26,089,658. For the same cities in 1903 it was $33,541,729, and for 175 cities in 1903, $33,828,816. These amounts, as has been explained above, correspond approximately to the payments for commercial outlays and outlays for local or special improvements. If they differ from such payments they are doubtless somewhat less. Deducting these from the totals for outlays given above, and also deducting the amount received from sales of real property, there is obtained as a statement of the approximate net payments for general outlays in 160 cities in 1902, $103,388,597; for the same cities in 1903, $140,650,177, and for 175 cities in 1903, $141,993,783. The actual net payments for such outlays was in all probability slightly less than the amount above given, since with the continued increase from year to year of payments for all outlays the new assessments ordered each year to pay for commercial outlays made that year are greater than the collections from assessments ordered in preceding years. The payments for debt reduction in Table III are by the cities whose payments for such reduction exceed their receipts from new loans issued. The figures given in Table III are the aggregate of the amounts marked [6] in 1902 and [9] in 1903 in the division of Table 35 with title "excess of receipts over payments, exclusive of changes in sinking fund assets" in column "public."

A comparison of the figures of Table III for the 160 cities for the fiscal years 1902 and 1903 discloses the following facts: The net corporate payments in 1903 exceeded those for 1902 by $54,621,594, or 11.5 per cent, as compared with an increase in estimated population of only 2.4 per cent. The increase in payments for expenses was 3.1 per cent, in payments for outlays 35.1 per cent; while the total net payments for debt reduction decreased from $6,797,552 to $6,134,415, or nearly 9.4 per cent. The great material increase in corporate payments was, therefore, in those for outlays, and, as will be pointed out in connection with the analysis accompanying Table IV, the money to meet such additional outlay expenditures was largely derived from the proceeds of additional debts incurred.

Corporate receipts.—Table IV presents a summary of corporate receipts which corresponds in character to that given for corporate payments in Table III. These receipts are grouped into those from general revenue, municipal investment income, municipal industrial income, municipal service income for expenses, municipal service income for outlays, and net receipts from changes in amount of debt obligations outstanding. The numbers in the first column are those of the tables from which the data are derived or to which the figures correspond.

The figures of Table IV are in all cases the totals of the several general tables referred to by the numbers in parentheses, after deducting the service transfers included therein. The receipts from special assessments in 1903 are by this rule made to appear $17,099 less than the total given in Table 30. This is due to the fact that deduction is here made for a service transfer of that amount included in Table 30 in the city of Chicago, and in that table marked by a footnote.

TABLE IV.—*Classified summary of corporate receipts during the fiscal year for 175 cities in 1903, 160 cities in 1903, and 160 cities in 1902.*

SOURCE OF RECEIPTS.	175 CITIES.	160 CITIES.	
	1903	1903	1902
General revenue:			
(a) Taxes (24)	$287,662,339	$284,083,625	$278,193,532
(b) Licenses, etc. (25)	37,072,646	36,700,751	34,352,715
(c) Permits, etc. (29)	(1)	(1)	812,669
(d) Contributions (26)	19,748,570	19,363,282	18,053,409
(e) Miscellaneous (26)	614,508	613,358	79,323
Total general revenues (40)	345,098,063	340,761,016	331,491,648
Municipal investment income (27)	7,334,182	7,308,040	6,437,804
Municipal industrial income (28)	51,896,533	51,062,959	48,776,057
Municipal service income for expenses:			
(a) Privileges, etc. (24)	3,944,229	3,928,408	3,554,838
(b) Fees (25)	(2)	(2)	1,722,028
(c) Departmental earnings (29)	9,833,556	9,647,435	6,691,439
Total municipal service income for expenses	13,777,785	13,575,843	11,968,305
Municipal service income from special assessments for outlays (30)	33,828,816	33,541,729	26,089,658
Total municipal service income	47,606,601	47,117,572	38,057,963
Total commercial revenue	106,837,316	105,488,571	93,271,824
All revenues	451,935,379	446,249,587	424,763,472
Net additions to outstanding debt (35)	91,738,063	90,408,635	60,085,863
Corporate receipts, including refunds (40)	543,673,442	536,658,222	484,849,335
Refunds	2,049,239	2,039,096	2,002,436
Net corporate receipts (20)	541,624,203	534,619,126	482,846,899

[1] Included in Table 25. [2] Included in Table 29.

The net corporate receipts from 160 cities in 1903 exceeded those in 1902 by $51,772,227. This excess was made up by an increase in general revenue receipts of $9,269,368, of commercial revenue receipts of $12,216,747, and of a net increase in the receipts from additions to outstanding indebtedness of $30,322,772. The difference between the sum of these increases and the increase in net corporate receipts marks the difference in the amount of refunds paid in the two years, $36,660. The net corporate receipts increased 10.7 per cent as compared with an increase in corporate payments of 11.5 per cent. The receipts of general revenue increased 2.7 per cent, or only a trifle more than the estimated increase in population. The receipts from commercial revenue increased 13.3 per cent, and the additions to outstanding debt were greater in 1903 than in 1902 by 50.1 per cent, showing that the greater portion of the increased payments for outlays already pointed out was from increased additions to outstanding debt, and in small part from accrued commercial revenue, notably special assessments.

The data summarized in Tables III and IV permit of a number of most interesting comparisons and deductions. In making these, attention is called to the following facts: The refund payments for correction of errors in receipts are almost wholly from general revenue, and the refund receipts in correction of errors are more largely in connection with expenses than with outlays. These deductions and allowances may, therefore, be made from payments for expenses and receipts from revenue. Making such deductions, the following comparisons can be made with only a small margin for errors in statement.

The total receipts from revenue, less refunds, for 160 cities in 1902 were $422,761,036. The corresponding payments for expenses were $338,252,086. The excess of the former over the latter is $84,508,950. This excess represents the amount of receipts from revenue that was available either for debt reduction or for payment of capital expenditures, or for addition to security fund assets. Of this $84,508,950 excess, $26,089,658 was derived from special assessments, and was specially provided for outlays for local improvement. The balance, $58,419,292, was derived from general revenue and the surplus of commercial revenue, that is, from the surplus of municipal investment income and industrial expense income. The total amount of all revenue receipts available for outlay expenditure or debt reduction, as stated above, constituted 20 per cent of the total receipts from revenue, after deducting refunds.

The corresponding receipts from revenue, less refunds, for 160 cities in 1903, were $444,210,491, and the corresponding payments for expenses were $348,823,166. The excess of the former is $95,387,325. This excess revenue available either for debt reduction or for capital expenditure was somewhat greater in 1903 than in 1902. The increase of such excess is largely an increase in the receipts from special assessments for outlays. The total receipts from such assessments in 1903 aggregated $33,541,729. The excess of other revenue available for outlays or debt reduction was, therefore, $61,845,596, a slight increase over the preceding year. The percentage of all revenue receipts available in 1903 for outlays or debt reduction was 21.3, or slightly more than in 1902.

Temporary payments.—The temporary payments connected with corporate transactions have already been described in detail on page 15. The refunds are summarized in Table 30, and the accrued interest is given in Tables 21, 32, 33, and 34. The totals there given are the same as shown contra in Table 27. The temporary payments on account of investments purchased by sinking, investment, and public trust funds are given in Tables 32, 33, and 34. The temporary payments, as well as receipts, on capital account resulting from sales of real estate are given in Table 30, and the counterbalancing payments in debt transactions given in Table 35. Those in trust or agency accounts are given in Tables 30 and 31. These temporary payments are summarized in Table V for the 175 and 160 cities in the fiscal year 1903 and the 160 cities in the fiscal year 1902.

TABLE V.—*Classified summary of temporary payments during the fiscal year for 175 cities in 1903, 160 cities in 1903, and 160 cities in 1902.*

CHARACTER OF PAYMENTS OR DEDUCTIONS.	175 CITIES.	160 CITIES.	
	1903	1903	1902
Refunds (30)	$2,577,860	$2,562,360	$2,841,869
Accrued interest (27)	179,544	177,038	330,882
Investments (34)	8,555,314	8,543,613	21,341,661
Investments (33)	31,384	31,384	202,500
Investments (32)	1,154,565	1,151,369	2,196,449
Real estate sales (30)	1,399,276	1,396,051	476,804
Debt reduction (35)	187,234,560	184,843,029	158,502,032
Agency, miscellaneous (30)	.....	.....	1,376,649
Agency, taxes, etc. (30)	19,286,636	18,785,413	19,595,995
Agency, private trust (31)	9,045,024	9,012,724	1,959,447
Total temporary payments	229,464,163	226,502,981	208,824,288

The most important class of transactions involving temporary payments and receipts are those connected with the public debt. The cities are constantly making and paying loans, the greater portion of the payments and receipts in connection with which are in one sense or another temporary. They are such that at the close of the fiscal year at least they do not increase or decrease the sum total of municipal liabilities. These temporary loan transactions in 1902 for the 160 cities aggregated $158,502,032. They constituted 75.8 per cent of all the temporary payments of Table v. The relative amounts of the temporary payments on account of investments of the permanent funds are not far from those of the temporary payments by the city in agency and trust transactions. The first for the 160 cities in 1902 aggregated $23,740,610, and the latter, $22,932,091. As compared with these aggregates, those affecting the revenue accounts by refunds and accrued interest are comparatively small. The proportion of these temporary payments for 1903 does not vary sufficiently from those in 1902 to justify extended reference thereto.

Temporary receipts.—For the greater number of objects the temporary receipts are identical with the corresponding temporary payments. The most important variations are those in the investment accounts and occasionally in the matter of taxes and licenses collected for other civil divisions. These temporary receipts are summarized in Table VI.

TABLE VI.—*Classified summary of temporary receipts during the fiscal year for 175 cities in 1903, 160 cities in 1903, and 160 cities in 1902.*

SOURCE OF RECEIPTS.	175 CITIES.	160 CITIES.	
	1903	1903	1902
Refunds (30)	$2,577,860	$2,562,360	$2,841,869
Accrued interest (27)	179,544	177,038	330,882
Investments (34)	3,627,935	3,612,435	2,899,541
Investments (33)	10,400	10,400	8,012,192
Investments (32)	1,132,828	1,131,828	790,394
Real estate sales (30)	1,399,276	1,396,051	476,804
Additional debt incurred (35)	187,234,560	184,843,029	158,502,032
Agency, taxes (24)	17,859,798	17,368,570	18,374,883
Agency, licenses (25)	1,156,315	1,144,812	1,165,834
Agency, miscellaneous (30)	.....	.....	832,728
Agency, private trust (31)	9,556,793	9,525,134	2,418,636
Total temporary receipts	224,735,309	221,771,657	196,645,795

The variation above noted with reference to the temporary receipts and payments on investment account of the sinking, investment, and public trust funds, is the principal factor causing the temporary receipts to be less than the temporary payments. This factor is a more or less permanent one, and is present for both years in a great number of groups and totals given in the tables. The difference, however, is one that largely grows out of the nature of the sinking funds, which are accumulating assets and thus purchasing more securities than are disposed of by redemption, cancellation, or sale.

TABLE 21.

General and municipal service expenses.—In Table 21 is presented an exhibit of the combined payments of cities on account of the two classes of expenses which have already been designated as "general" and "municipal service" expenses. The first represents the costs of conducting the municipal government in the general interest; the second, the costs of special services for which payments are made by the individuals specially benefited thereby. Reports of receipts in return for special services rendered are easily secured; it has been found impracticable, however, to secure any exact statement of the corresponding payments, because, in the accounts of cities, they are not separated from payments for general expenses.

In many cities the agents of the Bureau of the Census experienced great difficulty, in both 1902 and 1903, in separating salaries and wages from other expenses; in many cases this separation involved the expenditure of much labor, and in some no accurate separation was possible without more labor than was at the disposal of the Census agents. This condition of affairs was particularly marked in 1902; it is believed, however, that the error is not very appreciable in the returns for 1903, except for a few branches of the statistics of a few cities, and hence there is a closer approximation to accuracy in 1903 than in 1902. In both reports, but especially in that for 1902, the imperfections consist of an understatement of the payments for salaries and wages and a corresponding exaggeration of payments for miscellaneous expenses. These imperfections should gradually disappear in future reports. Undoubtedly, the principal factors that will contribute to this end are improvement in the official records of the great majority of cities, the awakening of interest in the subject on the part of municipal fiscal officers, and the better mastery, by Census employees, of all requirements connected with the collection of the data.

The payments of cities for general and municipal service expenses are distributed in Table 21, in accordance with the scheme of the National Municipal League, among the following main divisions: I. General administration; II. Public safety (protection of life, health,

and property); III, Public charities and corrections; IV, Public highways and sanitation; V, Public education, libraries, etc.; VI, Public recreation; VII, Miscellaneous general expenses; and VIII, Interest on municipal obligations.

The table further classifies the payments of each general group under a number of different heads. But, as certain of the divisions attempted in 1902 involved a classification of certain items of expense quite different from that employed by the majority of cities, thus necessitating the expenditure of much labor on the part of the Census employees without adequate return in the shape of satisfying statistics, a somewhat different treatment was adopted in 1903. For example, expenses for "public printing," "light, other than for streets," and "water for general purposes," which in 1902 were tabulated separately and included under "general administration," in 1903 were tabulated just as reported by the several cities, the great majority of which include these payments with those of the respective departments or offices. For the few cities which segregate these items of expense the payments made in 1903 are included in the column "miscellaneous general accounts," under "general administration."

A study of Table 21 suggests that many exceptional payments may be included in the first six divisions that should be brought into Division VII. Future Census reports will doubtless show an increase in amounts tabulated as "miscellaneous general expenses," not because of any increase in such payments, but by reason of the demand for more accurate classification. An increase of this kind will make the statistics for the other groups more comparable, and will bring out the real significance of the table in all respects.

General administration.—In 1902 the payments, exclusive of service transfers, reported under "general administration" for the 160 cities aggregated $26,407,607. The corresponding figures for 1903 are: Total, including service transfers, $25,503,434; total, exclusive of service transfers, $25,370,968, showing a decrease of $1,036,639, or 3.9 per cent.

The payments for the "mayor's office" and "executive boards," which are shown separately for 1903, are combined under the head "mayor and executive offices" for 1902. Among payments for "executive offices" are included those for executive boards or offices exercising general supervision or direction over two or more divisions of the offices differently classified according to the scheme of the National Municipal League.

The payments for legal services are given in greater detail in 1903 than in 1902. In both tables, payments for "damage settlements and claims" include all payments made in settlement of demands against the city and of suits for damages settled outside of court; payments for damages awarded in condemnation proceedings, however, are not tabulated in Table 21, but are included as outlays in connection with the branch of service for the benefit of which the property was condemned.

Among payments for "statistical offices" are included all payments for the collection and registration of vital statistics and all other general municipal statistics.

Among "miscellaneous general offices" are included all general offices that can not be identified with any one of those specifically mentioned in the table. The payments reported under this head include those for examining and licensing individuals engaged in specified occupations, and for the expenses of municipal civil service commissions, telephone exchanges, bureaus of public property, commissions, or departments of supplies and materials, etc.

Public safety (protection of life, health, and property).—Taken as a whole, the statistics for this division are fairly comparable for the two years. In 1902 the payments, exclusive of service transfers, aggregated for the 160 cities $81,946,461. The total for 1903, including service transfers, is $86,447,799; exclusive of such transfers, it is $85,995,009, showing an increase of $4,048,548, or 4.9 per cent.

Under the head "miscellaneous courts" are tabulated the payments for expenses of probate courts, justices' courts, coroners' inquests, proceedings in lunacy, court buildings, and courts other than those already mentioned.

Public charities and corrections.—In 1902 the 160 cities reported a total payment for charities and corrections, exclusive of service transfers, of $17,652,442. In 1903 the reported payments for these cities, including such transfers, were $18,422,144, or exclusive of them, $18,277,895. This is an increase during the year of $625,453, or 3.5 per cent.

Public highways and sanitation.—To the fourth division of departmental functions is given the designation "public highways and sanitation." Neither the name nor the classification is wholly free from objection. The statistics for sewers are included with those for highways because in the smaller cities they are under the same supervision and have the same engineering officer, whose expenditures can not be assigned to either branch of the service. Only in a few of the larger cities do we find a scientific arrangement by which health departments, street cleaning, sewers and sewage disposal, refuse disposal, and other lines of sanitary work are brought into one group of offices and accounts. Until such arrangement becomes more common the illogical classification employed in the Census tables must be followed, notwithstanding the objections that may be legitimately urged against the same.

In 1902, as a result of causes similar to those which rendered it difficult to separate salaries and wages from miscellaneous expenses, great difficulty was experienced

in separating expenses from outlays; it is possible, therefore, that the amounts reported by some cities as the payments for miscellaneous expenses in that year include amounts that should have been reported as outlays.

In 1902 the aggregate payments for expenses of public highways and sanitation, exclusive of service transfers, were $54,251,996. In 1903, for the same cities, the aggregate was $55,780,268 including service transfers, and $55,126,802 exclusive of such transfers. This is an increase of $874,806, or 1.6 per cent.

The organization of municipal government with reference to the supervision and character of departments and offices varies more widely in the case of Group IV than with reference to any other class of municipal functions. For this reason strictly comparable statistics for departments and offices are more difficult to secure in the case of public highways and sanitation than for any other main division. For many cities the only comparisons which can be made are those between groups of offices and accounts; and sometimes the same is true of comparisons between the 1902 and 1903 reports for the same city. Attention is called to the desirability of consolidating for comparative purposes all such payments as are included under the heads "general management" and "general street expenses," and likewise all those under the heads "street cleaning" and "refuse disposal."

Certain payments made by the Massachusetts cities grouped around Boston to the Metropolitan sewer fund are tabulated not in Division IV but in Division VII.

Public education, libraries, etc.—In 1902 the payments, exclusive of service transfers, reported by the 160 cities for educational expenses, including those for schools, libraries, museums, etc., aggregated $79,655,721. In 1903 for the same cities, the aggregate was $86,252,919 including service transfers, and $86,050,276 exclusive of such transfers. This was an increase of $6,394,555, or 8.0 per cent.

The statistics for public schools are given in much greater detail for 1903 than for 1902. The headings for both years fully set forth the classes of payments included in each column.

Of the 160 cities whose statistics are presented in 1902 and 1903, there are four—Mobile, Ala., Savannah and Augusta, Ga., and Jacksonville, Fla.—for which no reports of receipts or payments on account of schools are included in the table, because their schools are under the authority of the county, and not of the city. The reported county expenditures for schools in these cities for the years 1902 and 1903, respectively, were as follows: Mobile, $57,992 and $58,617; Savannah, $143,767 and $144,626 ($20,500 and $26,300, respectively, in payment of loans); Augusta, $98,670 ($3,885 for outlays) and $98,446; Jacksonville, $92,602 ($13,321 in liquidation of warrants of preceding years), and $129,538 ($34,197 for buildings).

Public recreation.—In 1902 the grand total of payments for expenses of parks, bathing beaches, celebrations and entertainments, and miscellaneous recreation for the 160 cities was $12,280,198, exclusive of service transfers. The corresponding total for the same cities in 1903 was $7,369,463 including such transfers, and $7,312,481 exclusive of such transfers. The difference here shown is due to the exceptional payment made by St. Louis in 1902 of $5,000,000 in aid of the Louisiana Purchase Exposition. Excluding that amount in 1902, the payments other than for service transfers increased from $7,280,198 to $7,312,481, a gain of $32,283, or 0.4 per cent.

Attention is called to the relatively large payments for parks by Washington, D. C. The title to the parks of this city is vested in the United States Government, and the payments for new grounds, buildings, and improvements do not add to the possessions of the city, but to those of the United States. For this reason, all payments for such lands and improvements are included in Table 21, as for expenses, and not, as for other cities, in Table 23, under outlays.

As to payments made by the Massachusetts cities grouped around Boston to the Metropolitan Park Commission, see the next paragraph.

Miscellaneous general expenses.—The payments for miscellaneous general expenses include losses by defalcation and by fire, and other expenses of an exceptional nature. The group is small, and includes but few payments which have general significance so great as to call for specific description.

Conspicuous among such payments are those made by Massachusetts cities to the metropolitan park, water, and sewer commissions; all such payments are included in the column of "sundries." These commissions, acting in the joint interest of the cities grouped around Boston, have secured lands for parks and improved and maintained the same for park purposes, and have constructed sewers and water systems. Each of the cities benefited by these systems contributes to the liquidation of the debt incurred in their construction or purchase, to the payments of interest on such debt, and to the cost of maintenance. The payments made in 1902 and 1903 for these three objects of expense as reported by the state auditor were as follows:

Payments to Metropolitan Park Commission: 1902.

CITY.	Total.	Sinking fund.	Interest.	Maintenance.
All cities	$439,114.07	$97,755.85	$208,444.38	$132,913.84
Boston	309,709.50	68,947.25	147,012.50	93,749.75

Somerville	46,588.33	6,766.95	21,671.10	18,150.28

Interest on municipal obligations.—Under this head Table 21 shows the payments of cities for interest on their debt obligations. As transactions between the general treasury of a city and one of its permanent funds do not represent any money derived from revenue to meet expenses, and therefore are in the nature of transfers, the gross amount paid by each city to its sinking, investment, and public trust funds as interest on city securities held by them, and the amount paid on other outstanding city securities, are shown separately. Receipts and payments of accrued interest—that is, interest received by the city when bonds were sold, and returned by the city as payments at the first payment of interest thereafter—are also subdivided according as they involve transactions with the permanent funds or with the general public. The net amount taken from revenue to meet interest payments is obtained by subtracting from the gross amount of interest paid to the public the accrued interest received from and paid to the public. In Table 21 this is headed "net corporate payments" for interest.

Table 22.

Municipal investment expenses.—In most American cities the administration of sinking and investment funds is under the immediate direction of the city treasurer or comptroller, and in such cases few, if any, expenses are incurred in their management. The same is true to a certain extent of public trust funds. These facts explain the absence of municipal investment expenses from the reports of many cities, and the small amounts reported for others.

Municipal industrial expenses.—Among the institutional industries for which expenses are reported in Table 22, outlays in Table 23, and receipts in Table 28, mention may be made of those connected with penal institutions in New York, Chicago, Philadelphia, St. Louis, Boston, Cleveland, Detroit, and Peoria, Ill., and with the house of refuge in St. Louis. Both the house of correction and the house of refuge of St. Louis operate bakeries with the aid of the labor of inmates. The house of correction in Cleveland operates a brush factory. The exact character of other institutional industries was not reported.

Among the industries included in the column "all other municipal industries" are the following: Toll bridges were reported by New York, N. Y., Covington and Newport, Ky., and La Crosse, Wis. Real estate was reported by Chicago, Ill., Pittsburg, Pa., Des Moines, Iowa, Manchester, N. H., Brockton, Mass., and Augusta, Ga.; in most of these cities the real property involved was secured incidentally in the collection of taxes. Ferries and rapid transit were reported by Boston, Mass.; New York reported outlays (but no expenses or receipts) for rapid-transit subways. Subways for pipes and wires were reported by Baltimore, Md., Springfield, Mass., Erie, Pa., and New Britain, Conn.; convention hall by Buffalo, N. Y., Huntington hall by Lowell, Mass., coliseum by Peoria, Ill., and auditorium by Chattanooga, Tenn.; leasehold rents by Cincinnati, Ohio; asphalt plant and brick plant by Detroit, Mich.;

sugar sheds by New Orleans, La.; lunch room in high school by Rochester, N. Y.; irrigation ditches and works of various kinds by Denver, Colo., Los Angeles, Cal., San Antonio, Tex., Salt Lake City, Utah, and Colorado Springs, Colo.; stone quarries by San Antonio, Tex., and Auburn, N. Y.; liquor agency by Portland, Me.; coal yard by North Adams, Massachusetts.

Of municipal industries the exact character of which was not reported, mention may be made of the so-called Martin Act property of Jersey City, N. J.; the Bureau of Compensation in New Haven, Conn.; the Port of Portland office, in Portland, Oreg.; and the magazine keeper in Mobile, Alabama.

Chicago reported a department of electricity, which is included in the column "electric light works," although it is something more than an ordinary electric light plant.

The special Census report on electric light works shows that the number of plants operated by municipalities in 1902 was 23. Four of these were in the city of Chicago, and the expenses reported in the column "electric light works" include those for the department of electricity proper and the three independent municipal plants of the three park boards. The other electric light works for which no payments for expenses are included in Table 22 are plants operated exclusively for municipal purposes. The payments for expenses of these plants are reported under "municipal lighting" in Table 21. Of the cities having electric light plants that are not here reported as municipal industries, mention may be made of New York and Buffalo, N. Y., Cincinnati, Ohio, Fort Worth, Tex., Nashville, Tenn., Allegheny, Pa., Kalamazoo, Mich., Topeka, Kans., Aurora, Ill., St. Joseph, Mo., and Little Rock, Arkansas.

Payments made by Massachusetts cities around Boston to the Metropolitan water fund are not shown in the column of "waterworks," in Table 22, but are included in Table 21, in the column of "sundries" under "miscellaneous general expenses."

Table 23.

Outlays.—The payments made for outlays in 1902 are classified as for municipal industries and for the groups of departments or offices indicated in the scheme adopted by the National Municipal League. The inquiries made in 1903 include, in addition to those made in 1902, inquiries with reference to service transfers which should properly be included with outlays, and also as to those payments for salaries and wages of municipal employees which should be charged up to the same account.

As but few cities show an adequate separation of payments for outlays from those for expenses, the best agents are liable to make mistakes in dividing payments into these two important classes. It is believed, however, that the classification made in 1903 is more nearly perfect than that made in 1902. Progress along this line may be measured by the extent to which cities are led to adopt uniform methods of keeping accounts and to make an accurate separation of payments for outlays from those for expenses.

The amount reported in 1903 as salaries and wages charged to outlays is only about 4 per cent of all outlays. If this is a fairly complete exhibit, it would indicate that most constructive work is done by cities through contract and not by day labor; but the public records of many cities are so defective as to justify the belief that the statistics presented are only a very imperfect approximation to a complete exhibit of the amount of outlay payments made for salaries and wages of municipal employees.

Table 24.

Receipts from specified taxes.—In Table 24 are presented exhibits of the receipts of cities from property, poll, and special business taxes. The presentation of these receipts and those from licenses and permits, fines and forfeits given in Table 25, together with the receipts from privileges given in Table 24, is arranged to facilitate the study of public taxation and the most important general revenue receipts by all interested in the subject. The problems involved in the proper tabulation of the data here referred to are more perplexing than those presented by any other class of financial statistics. The laws under which the public revenues are collected are so diverse and framed from so many different points of view that it is impossible to draw any absolutely hard and fast lines separating one class of taxes and privileges from another, since each class shades off by degrees into other classes. Under these circumstances, the attempt has been made in these tables to group the taxes and other general receipts under a number of main heads in such a way as to attract the attention of students of public taxation and furnish the basis for a thorough study of the statistics thereof.

General property taxes.—The receipts from general property taxes are at the present time the most important single source of municipal revenue. These receipts are presented in Table 24 in two columns, marked "general levies" and "specific levies." The general significance of these terms is shown by the following definitions or statements:

General levies of the general property tax are those general property taxes levied by a government in all parts of the territory within its jurisdiction and upon all classes of property not specifically exempt.

Specific levies of the general property tax are those general property taxes levied by a government either upon certain classes of property or upon all property, not specifically exempt from all taxes, in a portion only of the territory within its jurisdiction.

The object of this separation is to bring together in the column B, "specific levies," all receipts from general property taxes that are levied under conditions meriting the special consideration of students of public finance. They comprise receipts from (1) levies of general property taxes made under circumstances that cause them to approximate in character special property taxes, special assessments, privilege taxes, licenses, etc.; (2) levies of these taxes which arise from the overlapping of governmental areas which still retain a certain amount of autonomy; (3) levies growing out of the absorption, partial extinction, or combination of previously independent governmental units, and the continuing under the new order of old obligations; and (4) levies arising from the embryonic development of new governmental units which may become, or are, partially independent for certain governmental functions.

General levies of the general property tax.—Under this head are included all receipts from taxes levied upon property on the basis of the ordinary general property tax paid by private individuals. Taxes on franchises assessed as real or personal property are here included. Among tax receipts of this character are receipts from so-called "special franchises" of public service corporations in New York state. These franchises are assessed in that state as real property and they contribute taxes to the city for local purposes, but not for state purposes. The tax is levied at the same rate ad valorem as upon all other real and personal property of the city. Similar contributions from taxes on the franchises of public service corporations are included with general levies of the general property tax in the cities of Kentucky.

A complete report on this branch of the subject calls for exact returns with reference thereto for all the cities of this state and of New York, but the agents of the Census were unable to secure the same for either 1902 or 1903. Taxes upon franchises as real and personal property are also included in the table under the general property tax for a number of other states.

Specific levies of the general property tax.—As above defined these may be arranged in two general groups: The first are those levied upon specific classes of property and are found in but few American cities; the second are taxes levied upon property of certain districts. They are found in a large number of cities. They are of two subtypes, growing out of distinct conditions. Those of the first type comprise additional taxes upon certain districts for *general* purposes, and those of the second, additional levies upon certain districts for *local* purposes.

Specific levies of the type first mentioned, as a rule, grow out of the recognition by the municipality of the special advantages accruing to property by reason of its location in a densely populated or highly improved section of the city. Capital invested in such sections is assumed to yield a higher average rate of income than property elsewhere, and hence, it is argued, should bear a relatively greater portion of the burden of public taxation. Consequently, after a tax has been levied upon all property in the city at a common rate, an additional levy is laid against property in the more densely populated or more highly improved sections. The proceeds of these additional levies are reported as "specific levies of general property tax."

Specific levies of the second type, i. e., additional levies upon certain districts for *local* purposes, ordinarily represent an attempt to localize the cost of local improvements without resorting to the now more common expedient of special assessments. In short, special taxes levied upon property in certain wards for local purposes constitute, in theory, a mean between the extremes of general taxes and special assessments. Such taxes are, as a rule, levied by wards or groups of wards to cover the cost of making local improvements in streets or parks or maintaining local systems of street lighting, sprinkling, etc. These, also, are reported as "specific levies of general property tax."

Specific levies of still another kind are reported for a number of cities, which, for one reason or another, impose a lower rate of taxation for general purposes upon certain outlying wards or districts. This represents the converse of the conditions involved in the taxes first described. In one case a heavier burden is imposed upon the more highly improved sections; in the other, the burden of the less improved sections is reduced by taxing them at a special lower rate. In such cities the Bureau of the Census reports as "specific levies of general property tax" the entire proceeds of the lower rate.

Conditions peculiar to Pennsylvania.—In Pennsylvania certain conditions attending the assessment and collection of taxes in cities of the second and third classes require special mention. Taxable property is divided into three classes and each class is taxed at a different rate. No distinction or separation is made in the collection of these taxes, the aggregate proceeds therefrom being designated "receipts from taxes." The Bureau of the Census, therefore, reports these taxes under "general levies of the general property tax," even though they are levied upon different classes of property at different rates, and under the foregoing definitions might properly be classed as "specific levies of the general property tax."

An analysis of the receipts from "specific levies of the general property tax," by cities, is presented in the appendix, page 55. The cities are there discussed in the order of their rank in population.

Special property and business taxes.—Under the head "special property and business taxes" the Bureau of the Census includes all revenue receipts of municipalities from taxes other than general property, poll, and privilege taxes. The taxes so included are of several types, each possessing certain characteristics of some

one of the three classes of taxes above mentioned, but differing therefrom in some essential feature.

Over 90 per cent of the aggregate receipts from this source represents contributions made to municipal revenue by commercial corporations, or by individuals by reason of their ownership of corporation securities. In the final analysis all such taxes, whatever the method of collection, are seen to rest upon the personal property of individuals, and hence may properly be designated *special property taxes.* Experience quickly demonstrated the impossibility of a just assessment of such taxes to the individual owner direct, and the corporation was made the agent of government for their collection. Different methods of levying and collecting this tax are followed by different cities, and by the same city in dealing with the various classes of corporations. No less than thirteen distinct methods are recognized and described by writers on public finance.

The taxes upon corporate property included by the Bureau of the Census with "special property and business taxes" may be divided with respect to the method of assessment into two general classes:

(*a*) Taxes levied upon the assessed valuation of the *securities* of corporations.

(*b*) Taxes levied upon the *gross earnings* of corporations.

From a theoretical point of view taxes of the first class might be included with general property taxes, since the basis of the levy is assessed valuation. They differ from general property taxes, however, in being levied against an evidence of property instead of against the property direct, and in the further fact that the burden imposed upon the individual property owner is in the form of decreased dividends instead of taxes.

The valuation of corporation securities for assessment purposes may be their par value, market value, or a valuation arbitrarily determined. "Special property and business taxes" include taxes upon the assessed valuation of the securities of street railways, national banks, and other corporations in Massachusetts; banks and general corporations in Connecticut; banks in New York; and miscellaneous corporations in Maine, New Hampshire, Maryland, and the District of Columbia.

Taxes levied upon the gross earnings of public service corporations are, in a general way, analogous to payments for public service privileges; applied to other corporations, they resemble *business taxes* or *business licenses.* The taxes upon the gross earnings of public service corporations tabulated under this head represent the proceeds of levies fixed and imposed by general statute. Similar payments made in accordance with the terms of the franchise of the corporation (thus representing a contractual relation between the parties to the franchise) are tabulated as receipts from public service privileges.

Taxes on public service corporations included with "special property and business taxes" include taxes upon the gross earnings of street railways, gas companies, electric light and power companies in Wisconsin and the District of Columbia, and upon street railways in Maine and New Hampshire.

Gross earnings taxes upon other than public service corporations are represented under this head by a per centum tax upon the gross premium receipts of foreign fire insurance companies in New Hampshire, New York, Pennsylvania, New Jersey, Illinois, Wisconsin, Kansas, and Missouri. The statutes establishing this tax are very similar for all of these states and are all evidently patterned upon the first enactment. The rate is usually 2 per centum upon the gross premium receipts of the companies subject to the tax, and is looked upon by the law as a payment for the privilege of doing business in the state. It is not accompanied with the issue of a license, and hence differs from a business license, as previously defined.

In some states the tax on insurance premium receipts is collected by city officials, and in others by state officials. In commonwealths where state officials make the collection the receipts are apportioned between state and local treasuries in accordance with statutory provision. In most states the city's portion of the tax is appropriated by general law for the benefit of the fire department or the firemen's relief association. In Missouri all insurance taxes are collected by the state, which converts one-half the receipts to state purposes. The other half is paid to a state fund known as the "county insurance fund," and is apportioned among the counties and cities on the basis of the number of children of school age, and may be used by them for any purpose which they may elect. The money is apportioned every year, but is paid to the counties and cities only once in two years. The amount paid to St. Louis in 1903 was $51,087.

In addition to the taxes upon corporate property as described above, there are included with "special property and business taxes," certain taxes levied upon private property on some basis other than assessed valuation. Of these the so-called frontage taxes, reported in certain New York and Pennsylvania cities, closely approximate special assessments, but differ in the essential feature of not being levied in proportion to an assumed benefit in the ordinary sense and in being devoted to maintenance instead of outlay. The tax on ships in foreign trade reported in Massachusetts; the per capita tax on horses and mules in Wilmington, Del.; and the merchants and manufacturers' tax in St. Louis, Mo., are all special property taxes, which are described in detail in the appendix, page 56.

California cities report the collection of inheritance taxes for the state. These are special property taxes, but are not included in the column "special property and business taxes" since they are state and not municipal revenue. The receipts from these taxes are included in the column "temporary receipts from taxes."

Poll taxes for local purposes.—Under this head the Bureau of the Census has sought to secure as complete an exhibit as possible of the receipts by cities from all forms of per capita taxes, whether uniform upon all males or graded according to occupation or otherwise, or whether levied as a specific amount against all persons subject thereto or as an ad valorem tax based upon an arbitrary valuation of polls.

Although one of the oldest forms of taxation in existence, the poll tax is not an important source of revenue for American cities. Of the $278,193,532 of total revenue receipts from taxes in 1902, only $966,388, or 0.3 per cent, was derived from poll taxes. Of this amount, $556,228, or 57.6 per cent, was reported by the state of Massachusetts, and $803,702, or 83.2 per cent, by the three states of Massachusetts, Pennsylvania, and New Jersey. The cities of eighteen states reported poll taxes, while those of twenty states reported none. The same states reported substantially the same proportion of poll taxes in 1903.

From the reports of agents it can be said that for nearly every state there is a greater margin of possible inaccuracy in the Census figures for poll taxes than for any other class of municipal receipts. This inaccuracy arises from the defective local records with reference to the subject. The records of assessment in practically all cities give a complete exhibit of the amount of poll taxes levied. In contrast, but few cities have any account of the amounts received from such taxes, the receipts commonly being included with general property taxes and other taxes under the general head "receipts from taxes." As a result the agents of the Census in the great majority of cases were able to obtain only approximately correct returns of poll taxes, and the amounts shown in Table 24 as receipts from that source are in many cases only estimates by local officers, based on percentages of the amounts levied which were thought to have been collected.

For a detailed description of poll taxes, by states, see appendix, page 59.

Penalties and collectors' fees.—Included among the receipts from taxes in 1902 is $2,911,321, under the head "penalties, collectors' fees, etc." The corresponding amount for 160 cities in 1903 is $3,151,949. Under this head the Bureau of the Census has striven to arrange all additions to original tax levies on property which have been collected on delinquent taxes. In some states these payments are called penalties, in some fees, and in others interest. In some the amount added is merely a small per centum collected as ordinary interest charges. In others there is a much greater per centum and the name applied is that of "penalties" or "fees." Much can be said in favor of including these receipts as interest, but they are here reported in Table 24 in the class with taxes and other penalties as from "general" and not "commercial" revenues. It is possible that a small portion of these receipts was on deferred payments and not on delinquent taxes, and should be classed as interest.

Receipts from public service corporations.—Public service corporations make payments to cities for quite a number of different purposes. In the great majority of cities they pay general ad valorem taxes the same as do other corporations. Such taxes are here included with general property taxes, and no separate statement of the receipts thereof can be secured. In addition, these corporations in many cities pay other taxes, here classified as "special property and business taxes." They also pay in some cities for license privileges, tabulated in Table 25 as "other business licenses." In the accompanying text attention has been called to municipal receipts from these sources. In addition to these contributions to the municipal general revenues, these corporations make other payments which are here tabulated as receipts from commercial revenue under the specific designation of "receipts from public service privileges."

Receipts from public service privileges.—In the column of Table 24 with this designation are included receipts for two quite distinct purposes. The first are payments to the city for specific services for these corporations, such as repairing streets, compensation of policemen at street crossings, etc. These could, with equal propriety, have been tabulated in Table 28 as "municipal service income" of the department performing the service. Under the second class of receipts the Bureau of the Census has sought to include all payments by these corporations for the use of or privileges in the streets and alleys. In some cases it has been impossible, with the information procurable, to state definitely how some receipts from public service corporations should be tabulated. More complete information relating to the laws under which they are made might in some cases lead to a different classification than the one here presented. A detailed analysis, by states, of the receipts from public service privileges is given in the appendix, page 60. Attention is specifically called to all receipts of the second class tabulated in the column here referred to. All receipts not thus specifically mentioned are to be understood as belonging to the first class, those for special services performed.

Receipts from minor privileges.—Under this general head the Bureau of the Census has sought to secure reports of the receipts of cities collected without the granting of a license for the privilege of maintaining private sewers, drains, or vaults under the streets or walks; lunch stands or other property on the sidewalk itself; extending awnings, bay and show windows, and other structures and conveniences, including signs, etc., beyond the building line. A few cities receive considerable income either of this kind or from privilege rentals, tabulated in Table 27. Other cities receive but very little income of either class. From all the information obtained the deduction is made that cities in

which the street title of the municipality extends past the curbing and over the sidewalk and parking to the building line collect considerable revenue from minor privileges and privilege rentals. In contrast, cities in which the title of the property owner extends past the building to the street curb receive but little income of the character mentioned. The reason for the difference is obvious. The right to use property or collect income accompanies the ownership thereof. The city exacts revenue from minor privileges and privilege rentals for the use of its property under and upon the sidewalks. Cities without such ownership exact no such recompense.

Temporary receipts from taxes for other civil divisions.—Under the head "temporary receipts from taxes for other civil divisions" the Bureau of the Census has tabulated all taxes reported by municipalities as having been collected for other civil divisions. In general, it may be stated that only receipts of this kind which actually pass through the city treasury and appear in the cities' cash accounts are reported to the Census. In some cities the taxes collected by the city tax collector for other civil divisions are by him paid over directly to the government for which collected, and no account either of their receipt or payment appears in the city books. In such cities the tax collector is usually bonded to the state or county as well as to the city, and in the collection of taxes for the state or county acts as the responsible agent of that division of government and independent of his position as a city official. Under such conditions the municipality is in no way concerned with the collection of taxes for other civil divisions, and ordinarily keeps no record of the amounts so collected. Wherever possible the Census aimed to follow the practice of the several cities, reporting taxes collected for other civil divisions when records of such collections appeared in the city books, and omitting them when omitted by the city from its accounts.

TABLE 25.

Receipts from liquor licenses and taxes.—The highest per capita receipts from liquor licenses are reported by the cities of Utah, Colorado, Minnesota, Illinois, Washington, and Nebraska. By state law Minnesota cities containing over 10,000 inhabitants can not license a saloon for less than $1,000 per annum, but may increase this amount at their discretion. In Illinois the general dram shop license for cities is $500 or more per annum, at the discretion of the local authorities. Licenses in Washington must be between $300 and $1,000 per annum. In Nebraska cities a license can not be granted for less than $1,000. The laws for the other states mentioned either require or permit the collection of large amounts by cities for liquor licenses.

Relatively small receipts from liquor licenses are reported by the cities of a number of states, among which may be mentioned Alabama, Indiana, Ohio, Rhode Island, Tennessee, Texas, and Virginia. In Alabama, Tennessee, Texas, and Virginia the state collects through state agency considerable amounts from the liquor traffic, and the cities are permitted or directed to impose additional fees for local purposes. In Indiana the county collects a license, and the city may add thereto not more than $250. Ohio has a uniform rate of $350 for each saloon, of which amount three-tenths goes to the state, five-tenths to the city, and two-tenths to the poor fund of the county. In Rhode Island half goes to the town or city and the other half to the state.

In Massachusetts one-fourth of the collection goes to the state and the remaining three-fourths to the city. In Connecticut the amounts collected are divided equally between city and county.

There are some cities which do not report any receipts from liquor licenses. In Wilmington, Del., all liquor and business licenses are collected by state officers for state purposes, the city deriving no benefit therefrom, either directly or indirectly. In Charleston, S. C., the liquor traffic is managed by the state under the dispensary system, and all direct revenue accrues to the state; the city benefits indirectly from the state receipts, however, the proceeds being appropriated for school purposes. Of the other cities reporting no receipts from liquor licenses, those in Kansas and Maine are under state prohibition laws, and the rest are under local prohibition through the operation of local option laws. A number of cities reporting nominal receipts from liquor licenses are also under local prohibition, the receipts being for druggists' licenses to sell liquor for medicinal purposes.

In a few cities the per capita receipts from liquor licenses for both 1902 and 1903 show some variation from the rule which seems to prevail in the state. This is true of Lawrence, Mass., St. Louis, Mo., Superior, Wis., and Sacramento, Cal., in each of which the per capita receipts are considerably larger than for the other cities in the same state. In the small cities of New Jersey, also, the per capita receipts from this source are large, as may be seen by comparing Atlantic City and Passaic with Newark and Jersey City; in this state the large cities can not collect over $75 as a license fee for dram shops, while the smaller ones can exceed this amount, and can even establish local prohibition.

Other business licenses.—Both total and per capita receipts from this source were greatest in the states along the South Atlantic coast from Virginia to Alabama, although there were a few cities with relatively large receipts in other parts of the country.

Included with business licenses other than for the liquor traffic are the following from public-service corporations:

In Alabama, in 1903, the receipts from street railway, waterworks, and lighting corporations aggregated $8,800 in Birmingham, $1,750 in Mobile, and $4,333 in

Montgomery. In 1902 the amounts were not reported separately, but were included in the totals for these cities.

San Francisco, Cal., reported in 1903 receipts from street-car licenses amounting to $10,290. No separate report of such licenses was obtained in 1902.

Savannah, Ga., reported in 1902 the receipt of $750 from tag license on street cars. The corresponding amount was not separately reported in 1903.

In Illinois, Chicago reported receipts from street car licenses amounting to $112,114 in 1902 and $126,008 in 1903. Quincy reported similar license receipts of $300 for each year.

Sioux City, Iowa, reported license receipts amounting to $363 in 1902 and $750 in 1903.

In Minnesota, Minneapolis reported $4,525 in 1902 and $4,100 in 1903 as receipts from street-car licenses. St. Paul reported for the two years similar receipts of $1,810 and $1,620, respectively.

In Pennsylvania every city except Reading reported license taxes on public-service corporations. Most of these are levied as "pole licenses" on telegraph and telephone companies, but some are levied as car licenses on street railways. The receipts from such licenses are shown in the following table:

CITY.	1903	1902
Total	$166,809	$166,603
Philadelphia	106,731	99,089
Pittsburg	20,100	24,369
Allegheny	88	.....
Scranton	3,396	3,189
Erie	5,609	.....
Wilkesbarre	5,335	4,666
Harrisburg	1,844	5,785
Lancaster	3,658	7,770
Altoona	538	968
Johnstown	1,511	2,549
Allentown	1,022	1,559
McKeesport	4,507	2,829
York	2,483	1,942
Chester	2,182	2,927
Newcastle	4,071	4,028
Williamsport	1,306	1,818
Easton	2,428	3,115

Dog licenses.—The receipts from this source average not quite 2 cents per capita. The per capita receipts for 1902 are generally higher than this average west of the one-hundredth meridian, and lower east of the Mississippi, except in the cities of Connecticut, Delaware, District of Columbia, Georgia, Illinois, Indiana, Maryland, Rhode Island, Virginia, and Wisconsin. The strikingly low figures for the cities of Ohio are explained by the fact that Ohio cities are subject to a general tax on dogs payable to the counties, any amounts that may be included in this column being in addition to such charges. In Massachusetts the dog taxes are collected by city clerks for the county. As Boston though not coextensive with Suffolk county, pays the county expenses and enjoys the county revenue, Table 25 gives for that city the total collections within its territory for dog taxes. Of the other Massachusetts cities, very few report any municipal revenue from dog taxes, and in those few cases the receipts reported are doubtless the percentages retained by the cities for the collection of the tax; such receipts might with propriety be included with fees, as they probably are by most other cities of the state.

General licenses.—The large per capita receipts shown under this head for Louisville, Ky., were derived mainly from buggies, carriages, and automobiles, and those shown for Galveston, Tex., were for vehicles not used in business; those shown for Minneapolis, Minn., for Seattle, Tacoma, and Spokane, Wash., and for Elmira, N. Y., were reported as from bicycle licenses or permits; those from Dubuque, Iowa, were said to be from cigarette licenses.

Fines and forfeits.—An examination of the tables shows wide variation in the per capita receipts of the several cities from fines and forfeits. In general, it may be said that they are largest in the cotton states and the Rocky Mountain and Pacific coast divisions; to this general rule, however, the largest cities in these sections—San Francisco, New Orleans, and Denver—form exceptions.

In some cities the relatively large amounts reported under this head are doubtless to be explained by the fact that in practice fines are treated by these cities as equivalent to licenses for gambling and disorderly houses, just as in some prohibition cities they are equivalent to liquor licenses.

In the South the prevailing and obviously economical practice is to punish the misdemeanors of the negro population by fines which are paid by the offender in the form of labor. This practice is more apparent in the tables for the inland southern cities than for the coast cities.

In the northeastern region, bounded by the Mississippi river on the west and by the Ohio and Potomac rivers on the south, the receipts are as a rule relatively small. One reason for this is the small amount of business done by the municipal courts; in this region these courts have jurisdiction over only a small proportion of the criminal cases of the community, such cases being generally brought before justices' courts and county courts, from which no reports of fines were received.

Fees.—Only a small proportion of the amounts actually paid to municipal officers as fees are included in the tables of the Census. In many cases these fees constitute the compensation of officers, and no public record is kept of such receipts. So long as any municipal office is a "fee" office these tables will be incomplete as exhibits of payments made by the public for municipal services.

The receipts from fees are given in Table 25 for 1902, and in Table 29 for 1903. Of the cities reporting the largest per capita receipts from this source, New York, Philadelphia, St. Louis, Boston, San Francisco, and New Orleans include county receipts with those of the city, while Providence and Pawtucket, R. I., include the

receipts of court offices and of the offices of the recorder of deeds and the register of wills, all of which are assigned to the city instead of to the county. In Baltimore, Richmond, and Norfolk, which are also county cities, the receipts reported as from fees are small, because all amounts not retained by the collecting officer are paid directly to the state. Washington, D. C., while not organized as a county, exercises all county functions, and the receipts from fees are correspondingly large. In Newark and Passaic, N. J., the amount of business done by municipal courts in 1902 was greater than the average, and their fees thus form a considerable total. The same may perhaps be true for Savannah, Ga., Portland, Me., Birmingham, Ala., and East St. Louis, Illinois.

Temporary receipts from licenses.—Most temporary receipts of this class are for liquor licenses. The cities collecting receipts from licenses for other civil divisions are few. On the other hand, a large number of cities receive revenue from liquor licenses from the state or from some other civil division; in such cases, the collections are usually made by the other civil division concerned, and a certain percentage of the amount received is apportioned back to the city within whose territory the collections are made.

Table 26.

Governmental contributions and grants.—In municipal finance the terms "governmental contributions" and "grants" are applied by the Bureau of the Census to moneys furnished municipalities from the revenues of other civil divisions. Contributions are those moneys of this class which are furnished by the state or some subdivision thereof under the provision of general statute, while grants are those furnished by acts or ordinances for a single specific occasion or purpose not repeated without additional legislation. The most common governmental contributions met with in American municipal finance are those received by cities from the state or county for the support of schools and libraries. The money furnished is generally derived from: (1) The incomes of invested moneys belonging to and held in trust by the contributing division for its citizens, and (2) taxes, licenses, fees, fines, etc., levied, collected, or received by the government of that division and distributed or apportioned according to specified rules to the subordinate civil division contained within the contributing division.

Governmental contributions are to be distinguished from those taxes, fees, fines, etc., which are levied or collected under the provision of general laws, and after certain fixed charges have been met are either applied wholly to the benefit of the civil division within whose territory or from whose citizens they are collected, or divided in some fixed proportion between that division and the one under whose general authority and through whose agency the levy is made, the license granted, or the fees, fines, etc., are collected. All receipts of this description are reported under the appropriate designation of taxes, licenses, fees, fines, etc., and not as governmental contributions or grants of the state, county, or other civil division through which collected or received.

It should be further noted that receipts by cities from other civil divisions to reimburse them for expenses incurred in behalf of those divisions or their citizens are classed as receipts from charges and are included in Table 29 and not in Table 26 for either year.

In the column of Table 26 giving receipts from other civil divisions for schools are included the contributions and grants for this purpose from the state, county, or other civil division. In this column are also included in a few cases, notably in New York cities, small contributions by the state for the support of school libraries. In the column giving receipts from other civil divisions for purposes other than schools are included all unclassified contributions. Over one-half the total amount so included outside the city of Washington is for libraries. These contributions are, however, relatively few and small.

Gifts and contributions from individuals.—The greater portion of the contributions from private individuals are tabulated in Table 26 in the column "for expenses." Of those so reported the larger amount are minor receipts of the various firemen and police relief associations, with small amounts in a few cities for various charitable purposes.

Of the $408,270 of gifts and contributions from individuals received in 1902 for outlays, the greater portion was for libraries. In fact, all amounts reported in that column were for libraries, with the following exceptions:

Boston, Mass., reported $26,000 for drinking fountain and $2,500 outlay on county building; Portland, Oreg., $325 for street improvement; Somerville, Mass., $2,375 for erection of fountain; Portland, Me., $8,000 for chapel in cemetery; Quincy, Ill., $4,040 for boulevards and parks; Knoxville, Tenn., $1,100 for hospitals; and Williamsport, Pa., $5,700 for paving. The receipts from private gifts and contributions were greater in 1903 than in 1902, but were of the same essential character.

Receipts from miscellaneous sources.—The receipts shown under this head in Table 26 are those concerning which no exact information was obtained. More detailed information would undoubtedly have led to their classification under different heads in the other tables of this bulletin.

Table 27.

Receipts from interest.—Cities in the United States report interest receipts from their sinking, public trust, and investment funds, from accrued interest on city securities sold, on current cash balance carried in bank,

and on taxes and special assessments. When the amounts so reported as interest on taxes and special assessments appeared to be in the nature of penalties and fees for nonpayment of the tax or special assessment at the time prescribed by law, they were tabulated in Tables 24 and 30 as penalties, etc. Only thus could such receipts be made comparable with those of other cities where such income was in law and in published reports classed as "penalties, fees, etc." Amounts received by cities, as from interest on taxes and special assessments which appeared from all available information to be interest on deferred but not delinquent payments of taxes and special assessments, have been tabulated as interest receipts and included in Table 27.

Of the $15,108,662 of gross interest receipts of 1902, $12,731,185 was reported by sinking, public trust, and investment funds. This amount constituted 84.3 per cent of the total. Of the total gross interest receipts of the funds mentioned, $8,339,976, or 65.5 per cent, was received from the city as interest on city securities held by them as investments. Such interest receipts appear as payments by the city and are thus balanced in the grand total of city receipts and payments. They are in the nature of transfers, or accounting debits and credits, and are so tabulated in Tables 19 and 20. Deducting these, and also the accrued interest on city securities received on the bond sales to the public and paid back to the contributors at the first interest payment thereafter, there is left, as the so-called net corporate interest receipts of the 160 cities for the fiscal year 1902, an aggregate of $6,437,804. This is the amount of interest received from the public to assist in meeting the operating expenses of municipal government.

In 1903 the gross interest receipts from the 160 cities tabulated in 1902 were $15,939,987. The interest receipts of the permanent funds were $13,288,864, or 83.4 per cent of the total. The receipts of these funds as interest on city securities aggregated $8,454,909, or 63.6 per cent of their total interest receipts. The net corporate interest receipts of the cities were $7,308,040, an increase of $870,236, or 13.5 per cent over the corresponding receipts of 1902. The net corporate receipts of the 175 cities tabulated in 1903 were $7,334,182.

TABLE 28.

Receipts from municipal industries.—The grand total receipts from municipal industries of the 160 cities tabulated in Table 28 for 1902 was $49,808,572, and in 1903, $52,363,211, an increase of $2,554,639, or 5.1 per cent. In the foregoing amounts were included service transfer receipts from other industries or from other departments of $1,032,515 in 1902 and $1,300,252 in 1903. The receipts from the public, exclusive of these service transfers, were, in 1902, $48,776,057, and in 1903, $51,062,959. The latter amount shows an increase in the receipts from the public in the year of $2,286,902, or 4.7 per cent. In both years the greater portion of receipts through service transfers were for water furnished by the waterworks. The receipts reported in 1903 for 175 cities were: Total, $53,220,127; exclusive of service transfers, $51,896,533; service transfers, $1,323,594. The classification of receipts in Table 28 is identical with that of payments in Table 22. For the particular industries included in column "all other municipal industries," see description of Table 22 (page 33).

TABLE 29.

Departmental receipts from municipal service income.—The schedule for 1903 differed to a slight extent from that for 1902 with respect to the manner in which certain receipts from municipal service income were reported. In 1902 receipts from permits were reported and tabulated among the miscellaneous receipts of departments, while in 1903 they were reported in connection with licenses. Accordingly, for 1902 such receipts are given in Table 29, while for 1903 they are given in Table 25, but in the general summaries by character of revenue presented in Tables 40 and 41 they are classified in the same way for both years.

The receipts in 1902 for 160 cities from departmental charges were $3,942,261; in 1903 for the same cities they were $5,254,381, an increase of $1,312,120, or 33.3 per cent. This great increase, it is believed, reflects the greater diligence of the clerks of the Bureau of the Census in securing reports of this branch of municipal income. A certain portion of these receipts is by many cities not carried on the city books but in separate and isolated accounts. To secure reports thereof has required much labor, and it is not believed that even the report for 1903 includes all of the receipts of this class by very many cities.

The departmental fees reported on Table 25 for 1902 aggregated $1,722,028. For the same cities as given on Table 29 for 1903 they aggregated $2,080,053, an increase of $358,025, or 20.8 per cent.

The departmental receipts from rents reported in 1902 for the 160 cities were $510,345, and in 1903 for the same cities, $601,229, an increase of $90,884, or 17.8 per cent. Those from privilege rentals decreased from $321,192 to $214,636, or 33.2 per cent. The considerable increase of rents and the decrease in privilege rentals unquestionably reflect the different methods of reporting certain receipts for the two years. Many receipts reported by the agents as privilege rentals in 1902 were reported in 1903 as rents. The reverse method of reporting doubtless occurred in a few cities. It may be noted that the total of these two classes of receipts shows little change. This total in 1902 was $831,537, and for the same cities in 1903 was $815,865, a decrease of only 1.9 per cent.

The receipts from sales for the 160 cities increased from $826,872 in 1902 to $942,234 in 1903. This is an

increase of $115,362, or 13.9 per cent. The receipts from these sales have been tabulated as "revenue." Undoubtedly some portion of these sales represents receipts from the disposal of worn-out equipment or property, the acquisition of which had previously been included among outlays, and under a correct system of accounting should be included with sales from real estate as temporary receipts. But these sales constitute only a small portion of the minor sales of cities, and as it has been found in practice impossible to separate the two classes of such minor sales, all the proceeds have been included in Table 29 as revenue or corporate receipts, and not in Table 30 in the same class with those from the sale of real property.

There was no appreciable change in the amounts reported as from miscellaneous sources in the two years. Theoretically, there should have been no such receipts. Their existence marks some failure of the clerks to secure data for the proper segregation of this minor city income. A part should undoubtedly have been returned as "miscellaneous" and tabulated in Table 26 as general revenue. The greater portion should have been tabulated under the various heads of Table 29. The amounts not thus segregated, but tabulated as miscellaneous in Table 29, in 1902 aggregate $240,024; in 1903 for the same cities the aggregate was $209,737. The decrease marks a slight improvement in the method of reporting.

The special assessment receipts for sprinkling streets, cleaning streets, and for other services not involving construction or outlay, aggregated $850,745 in 1902 and $1,127,489 in 1903. A small part of the increase, like that of charges, marks greater diligence on the part of Census agents in securing reports of accounts kept more or less separate from the principal books of the city.

The increase shown in service transfers, from $179,471 in 1902 to $782,324 in 1903, marks a change in the methods pursued in the two years. In 1902 the agents as a rule reported only service transfers to municipal industries. All other service transfers were eliminated, the same as minor general transfers. In 1903 the effort was made to secure reports of all such transfers for actual service performed.

TABLE 30.

Receipts from special assessments for outlay.—These receipts, referred to in definition as receipts from special improvement outlays, are given for the year 1902 under twelve general heads, exclusive of the column for penalties and fees. In 1903 these are condensed to five, the receipts of the last eight groups of 1902 being included in the single column "miscellaneous." The main reason for this condensation arises from the great amount of labor required to collect the data and fully separate the receipts according to the purposes for which they were levied. But few cities keep books in which these receipts *are classified*, and it should be noted that the *classification, where made*, is very imperfect. The totals, however, for most cities are fairly complete. The exceptions are met with in the case of a few cities from which only incomplete returns were secured in one or both years. A complete return for all cities for each year would have shown receipts at least 10 per cent greater than indicated in the tables.

The total receipts from special assessments for outlays reported in 1902 for 160 cities were $26,089,658. The corresponding total for 1903 was $33,558,828. A part of this difference, $7,469,170, represents an actual increase of municipal revenue from this source. Another part represents the results of the persistent labor of the agents of the Census in securing reports of such receipts for cities which do not carry them in the accounts of the ordinary treasury balances and transactions.

Temporary receipts and payments.—In 1902 very imperfect reports were secured of private trust funds and accounts. The receipts, payments, and balances were not sufficiently shown on city books, or the data relating thereto not sufficient to make a perfect report of the same in Table 31. The receipts and payments, for which no statement of balance in treasury was secured, are given under the appropriate heads in Table 30. For 1903 all such receipts, together with the corresponding balances, are included in Table 31 with private trust funds and accounts.

The temporary payments and receipts shown in Table 30 for both 1902 and 1903 are receipts from sales of real property, payments of taxes, licenses, etc., to other civil divisions, refunds of receipts to correct errors, and payments to correct errors. The payments to other civil divisions correspond to the receipts shown in Tables 24 and 25. Payments to other civil divisions for services rendered by them to the city, or for indebtedness of city to the divisions, are not included with temporary payments on the table, but elsewhere among corporate payments.

TABLE 31.

Private trust funds and accounts.—Under this general designation the Bureau of the Census has gathered for 1902 and 1903 all available information relating to the balances and transactions of cities connected with the property of private individuals and corporations received or held by the city or its officers in trust for any purpose, when the balances of such funds were given separately. The records of a very large proportion of cities are more or less imperfect with reference to these funds. Some carry an account of all transactions of the character here included with those for all city treasury transactions. Others never include them in any statement of treasury transactions or of cash balances on hand. Information relating to the subject was obtained and tabulated only when it was procura-

ble without too much labor. The movement for better systems of municipal accounts, which within the last two years has led to a reform of the system in many cities has called attention to these funds and to the importance of taking steps to secure (1) their complete separation from the ordinary fiscal transactions of cities, and (2) a complete accounting of these moneys as well as of those the city receives and expends in its own behalf. As a result of this movement the agents of the Census were able in 1903 to secure a much more complete exhibit of these funds and the municipal transactions with reference thereto than in the preceding year. The exhibit for 1903 is, however, a very imperfect one, although more complete than in 1902. In 1903 there were secured separate reports of these funds and accounts for only 71 of the 175 cities. In 1902 such accounts were obtained from only 56. Many of the reports for that year were only partial, and when the balances in the 1902 report differ from those of 1903 the latter is more nearly correct. The difference marks the imperfections in the 1902 report. For 1902 many receipts and payments on account of these private trust accounts were tabulated under appropriate heads in Table 30. The payments and receipts were shown on the city books, but no separate statement of balances was procurable, hence the disposition of the same in the tables.

The general importance of these funds from the side of the accountant can be seen from the fact that the aggregate payments and cash balances reported for 1903 were $13,030,360. In addition, these funds reported invested securities of $405,885. It is estimated from the best available information that this aggregate represented but little more than one-half the total that would be shown for the 175 cities were the exhibit a complete one. The importance of having accurate accounts with these funds on the part of cities is evidenced by the fact that in connection with them and with the trust funds of special assessments have occurred nearly all the defalcations in American cities within the past few years. The absence of complete accounts permits fraud and defalcation to go undetected for a long period of time.

TABLE 32.

Public trust funds.—In 1902 schedules were returned for what the Census denominated "public trust funds" by 91 of the 160 cities from which the Bureau of the Census secured reports, while of the 175 cities reported in 1903, 101 returned such schedules. In some cities there was only 1 such fund, while in one or two cities there were as many as 50. In some cities all cash balances and transactions are carried on the city treasury books, while in others they are kept completely separate. The Bureau of the Census in Table 32 presents them as if kept entirely separate from the city treasury accounts. In most cases the funds here tabulated are under the direction of the ordinary fiscal officers of the city. In some, however, they are not directly subject to such direction. They are controlled by independent boards of directors or trustees. The rules adopted for determining what public trust funds should be included in the census report are as follows: (1) Public trust funds, the majority of whose directors were appointed or elected by the city, were considered as municipal public trust funds whose transactions should be tabulated. (2) Similar funds, the majority of whose trustees was otherwise elected or appointed, were rejected from the tabulation, except in the case of public trust funds whose officials exercised some governmental function of the municipality, such as the collection of taxes, granting of licenses, etc. Thus the funds of firemen's and policemen's relief associations collecting fire insurance taxes are included with other public trust funds, even though all officers are elected by the members of the association, subject to the general laws of the state regulating their action. They are here included, not so much as public trust funds, as independent parts of the municipal government engaged under the general laws of their several states in collecting and disbursing taxes.

The cities reporting public trust funds in 1902 had assets at the close of that fiscal year aggregating $45,513,192. Of this amount $2,569,074 was in the form of cash, $10,923,050 in securities of the city from which they are reported, and $32,021,068 of other investments. The values of investments are given as "par." The actual or market value of these securities is somewhat greater. The corresponding figures for 1903 were: Aggregate, $48,317,279; cash, $3,319,029; city securities, $11,713,368; other investments, $33,284,882. The increase in total assets within the year was $2,804,087, or 6.15 per cent.

In both 1902 and 1903 some of the cash included in Table 32 as belonging to these funds was included in the cash balance of the general city treasury. Proper deductions are made therefor in Tables 19 and 20 or mention is made of the fact in a footnote to Table 32, one or both.

TABLE 33.

Investment funds.—In Table 33 are presented summary exhibits of the transactions and balances of all interest bearing securities and other productive investments, including real property, reported by cities, other than such securities, investments, and property held by the sinking and trust funds and municipal industries. In but few cities are the assets and transactions here tabulated given the name under which they are here presented. The Bureau of the Census uses this name as the most convenient one under which to make a common statistical presentation of all the exceptional productive investments of cities, especially those involving the investment of money in securities. Some of the

more important funds, as those shown in 1902 for Baltimore and Cincinnati, represent the assets acquired by cities in connection with appropriations and subventions for the construction of railroads. The smaller investments have arisen in a variety of ways, none of which seems to call for any special explanation in this connection. Of the 160 cities tabulated in 1902 there were 25 with these investments, and of the 175 tabulated in 1903, 26. Of the investments reported in 1902, 3 had been closed out before the end of the year, and to the remainder 2 were added in 1903. The aggregate value of the investment balances at the close of 1902 was $34,146,518. This consisted of $83,741 of cash, $126,856 of city securities, and $33,935,921 of other investments. The values of the investments given are those usually referred to as "par." The corresponding totals for 1903 were: Cash, $84,319; city securities, $191,301; other investments, $34,012,304; grand total, $34,287,924.

TABLE 34.

Sinking funds.—Under this head the Bureau of the Census has sought to include reports of all cash, securities, and other assets held by cities for the ultimate liquidation of their outstanding debt obligations, whether such assets are in the control of independent sinking fund commissioners or of such fiscal officers as the treasurer or comptroller. As an exhibit of the transactions and assets usually included by the cities themselves for these funds it is believed that the same is fairly complete. Attention has already been called to the fact that it does not seek to give an exhibit of the assets of cities in the form of tax levies and special assessments which are pledged for meeting specific loans. To that extent the Census exhibit is imperfect. The imperfections arise wholly from the fact that practically none of the cities includes these levies among their sinking fund assets, and many of them have no adequate record thereof to include in their municipal balance sheet. A proper exhibit of such assets pledged for the liquidation of municipal loans would present the financial condition of many cities in a more favorable light than is done by their present balance sheets or by the Census exhibits. The aggregate of taxes and assessments actually levied and pledged for meeting municipal loans, and thus properly included as sinking fund assets, probably equals all sinking assets tabulated by the Bureau of the Census.

For the 160 cities included in the Census statistics for the fiscal year 1902 the sinking fund assets reported at the close of the year aggregated $271,917,596. Of this amount, $16,110,507 consisted of cash; $232,974,246, securities of the cities to which the particular funds belong; and $22,832,843, of other securities and investments. The corresponding figures for 1903 for the same cities are: Aggregate assets, $290,590,299; cash, $16,768,778; city securities, $250,848,226; and other investments, $22,973,295. The figures for the 175 cities tabulated in 1903 are: Aggregate, $291,262,802; cash, $16,849,740; city securities, $251,396,061; other investments, $23,017,001.

The increase in sinking fund assets for the 160 cities was $18,672,703, or 6.9 per cent. This increase should be considered in connection with the increase of public debt given in Tables 35 and 36.

Of the invested assets of sinking funds the figures given above show that at the close of 1902, 91.1 per cent consisted of the securities of the cities holding them. The corresponding percentage at the close of 1903 was 91.6. The significance of the large amount of these city securities held by these funds lies in the fact that practically when a city purchases its own securities it actually reduces its debt. This fact is recognized by some states in their laws for determining the borrowing power of municipalities.

Only one line is given in Table 34 for the sinking funds of any particular city, although many cities have a large number of separate sinking funds. The Census report is a consolidation for all these independent sinking funds. In one respect the exhibit may be said to be fairly subject to criticism, since it does not distinguish between the sinking funds of the city government proper and of such independent branches as those connected with schools, parks, etc. The limitations of space must be pleaded as an excuse for the consolidation given.

In each year about one-half of the receipts of these funds consisted of general transfers from the city government and other independent branches. In contrast, the greater portion of payments, other than those on account of investments purchased, are made direct from the funds—in other words, sinking funds charged with the duty of paying either interest or the principal of debts more commonly make payments directly for that purpose rather than transfer money to the general treasury therefor.

TABLE 35.

Debt obligations.—The Bureau of the Census, in collecting data and compiling its statistics of debt obligations of cities, has sought to include in such compilation an exhibit of all obligations issued in the name of the city where the city promises to pay the same from its general revenues or from the proceeds of any special fund in the care, custody, or control of its fiscal officers. The exhibit should, if complete, give the total of merchantable or transferable securities or obligations of municipalities issued by their fiscal officers in the name of the cities or of the independent branches of their government. The list includes all such securities as those known as "corporation stock," "bonds," "revenue loans," "tax certificates," "special assessment loans," and also all warrants or orders on the treasury in settlement of audited claims where such warrants or

orders are unpaid at the close of the fiscal year of their issue.

Amount of debt obligations outstanding.—The total debt outstanding, exclusive of judgments, at the close of the fiscal year 1903 for 175 cities containing over 25,000 inhabitants, aggregated $1,425,841,585. This was an average or per capita debt of $65.91. The corresponding total in 1903 for the 160 cities tabulated in 1902 was $1,409,585,642. The per capita debt for these cities was $66.38. For the same cities in 1902 the total debt was $1,309,801,358 and the per capita debt $62.04. The total debt of the 160 cities increased $99,784,284, or 7.6 per cent. The debt increased faster than the population, producing an increase of 7.0 per cent in the per capita debt.

Of the debt of the 175 cities at the close of the fiscal year 1903, $263,300,730, or 18.5 per cent, was held by the municipal sinking, investment, and public trust funds of the city issuing the same. This amount of the debt was practically extinguished and should not in equity be considered in calculations affecting the city's power to incur indebtedness. The purchase of a city's obligations by a city sinking, investment, or public trust fund acts as a practical reduction of the city debt. It is not, however, so considered in law save in a limited number of states. Of the city debt obligations held by the public the average or per capita for the 160 cities in 1902 was $50.49, and for the same cities in 1903, $54.01, an increase of 7.0 per cent. For the 175 cities the per capita debt due the public in 1903 was $53.74.

Judgments outstanding may properly be included with municipal indebtedness. The amount of such judgments outstanding at the close of 1902 was as follows: Chicago, Ill., $4,213,197; New Orleans, La., $21,447; Denver, Colo., $17,735; Spokane, Wash., total judgments, $214,126, of which $50,500 was included as warrants outstanding; Altoona, Pa., $18,513; Chester, Pa., $2,122; Galveston, Tex., $8,027; Joplin, Mo., $11,009; Williamsport, Pa., $1,777; Cedar Rapids, Iowa, $1,250. The totals for the foregoing which are not included in Tables 35 and 36 aggregate $4,458,703.

The corresponding amounts in 1903 were: Chicago, Ill., $5,083,735; New Orleans, La., $29,715; Des Moines, Iowa, $17,416; Little Rock, Ark., $23,469; Spokane, Wash., $152,074; East St. Louis, Ill., $76,500; Springfield, Ill., $4,159; Chester, Pa., $7,809; Joplin, Mo., $11,009; total, $5,405,886. Of the judgments given above for Spokane in 1903, an unstated amount is in the nature of claims that may properly be classed as local improvement loans.

The changes in the par value of debt obligations outstanding, exclusive of judgments, during the fiscal years 1902 and 1903 are shown in Table 35 for all the cities and groups for which they present statistics. As disclosing the difference in the debt movement in American cities in the two years, attention is called to the figures for the 160 cities tabulated in both years. These cities in 1902 increased their total indebtedness by $61,933,925, and in 1903 by $99,589,791. The increase in the portion of the debt held by the public in 1902 was $40,493,090, and in 1903, $80,797,960. The increase in city securities held by city funds was $21,440,835 in 1902, and in 1903, $18,791,831. In 1903 the sinking, investment, and public trust funds added to their possession fewer city securities than they did in 1902, while the increase of municipal obligations in the hands of private individuals was practically twice as great in 1903 as in 1902.

For a portion only of the cities do the figures of Table 35 showing increase or decrease of debt obligations outstanding correspond exactly with the difference between the amount of obligations "issued" and the amount "paid or canceled." A number of factors, all arising from local methods of bookkeeping or imperfections in this report, contribute to this result. Attention is called to some of these factors.

The greatest discrepancy for any one city, $1,043,602, is found for New York in 1903. It largely represents the issue of warrants for payment of debt during the year when the debt was written off, while the warrants were paid in the following year. A large portion of these warrants were for liquidation of bonds held by the sinking fund. In Denver, Colo., the variation results from the debt obligations of territory annexed during the year. In a number of cities the discrepancy arises from the difference in the fiscal years of the various branches. The general city government in such cities issues all bonds, but the receipts from the sale of the same appear in the reports of the schools or other independent departments in whose behalf they are issued. The bonds listed as outstanding at the close of the year of the general government may not all have been sold at the close of the year of the department for which issued. Hence, the discrepancy noted.

Furthermore, many city reports omit from their exhibits of bonds outstanding all those which are due and unpaid, and the following year report the payment of such bonds. In some, unpaid claims of one year are liquidated in the next under the head of warrants of preceding year. Overdrafts of the treasurer may be shown in one year and not in the next. To the extent of the presence of any of these factors, the reported increase or decrease of the debt outstanding will not agree with the aggregates of bonds issued and liquidated. With the exception of New York and Denver, the variations due to these factors are, however, relatively small.

The payments for the cancellation or redemption of debt obligations in 160 cities were $184,079,312 in 1902 and $222,131,228 in 1903, an increase of $38,051,916, or 20.7 per cent. The corresponding increase in receipts from new obligations issued was from $245,905,737 to $319,761,462. This was an increase of $73,855,725, or 30 per cent. The table shows the amounts credited by

the city in both years for obligations belonging to the permanent funds that were redeemed or canceled by the city (tabulated as payments to city) and the amount paid by these funds for new obligations that were taken by them for investment (tabulated as receipts from city). These transactions with reference to debt obligations between the various branches of the city government and the permanent funds are in reality transfers, and are so shown in Tables 19 and 20. Of the receipts from new obligations issued, a portion in nearly all cities was utilized for reducing old debt obligations. The net receipts which the cities realized from debt obligations for meeting other municipal expenditures are the excess of receipts from the public over payments to the public on account of such transactions. In like manner, where cities reduce rather than increase their indebtedness the net payments for debt reduction are the excess of payments for such reduction over the corresponding receipts from new securities issued. Of the 160 cities tabulated in 1902, 64, or 40 per cent, made greater payments to the public for the cancellation or redemption of their debt than they received from the public for new debt obligations issued. The cities which increased their obligations to the public during the year number 96, or 60 per cent of the total. In 1903 the cities whose payments for debt reduction exceeded their receipts from new obligations issued numbered only 51 in a total of 175. They were, therefore, only 29.1 per cent of the total number, while those receiving more for new debts incurred than paying for old ones redeemed made up 70.9 per cent of the aggregate.

In 1902 the 160 cities tabulated received from new debt obligations sold to the public $53,288,311 more than they paid for the reduction of old obligations held by the public. The same cities in that year expended for outlays in adding to the value of their fixed properties $129,955,059, or $76,666,748 more than they added to the amount of outstanding indebtedness.

The net receipts from debt obligations issued aggregated, therefore, only 41 per cent of the addition to the fixed properties of the municipalities. In other words, of this addition to fixed properties there was paid from current revenue $3 for every $2 from new debt obligations issued.

In 1903 the amounts expended for outlays by 175 cities, exclusive of payments for service transfers, aggregated $177,536,592. The excess of receipts from the public for new debt obligations issued over the payments to the public on account of old obligations canceled was for these cities $85,473,872. The latter sum is 48.1 per cent of the former. This is larger than the corresponding percentage in 1902, and yet these cities paid for additional possessions out of current revenues the amount of $92,062,720, as compared with similar additions of only $76,666,748 in 1902. The cities thus materially increased their payments for outlays from revenue as well as those from loans. The marked increase in debt was accompanied by a still greater increase in the acquisition of fixed property.

The foregoing comparison does not fully set forth the facts to the credit of the cities, since the sinking funds and other permanent funds each year purchase some city securities from the public, in addition to those purchased, as above stated, from the city. As a result, the debt obligations held by the public increased in 1902 by only $40,493,090, while the excess of the receipts from the public over payments to the public were $53,288,311; and in 1903 the debt obligations held by the public increased only $82,034,139, as compared with an increase in net receipts from the public of $85,473,872. Taking these facts into consideration, it is found that the outlays met directly or indirectly from the proceeds of revenue were, in 1902, $89,461,969, and in 1903, $95,502,453. Some of the difference shown by the comparison first made vanishes when consideration is taken of the purchases of city securities by the permanent funds.

TABLE 36.

Classification of public debt by character of loans.—The character of public municipal loans and other written instruments evidencing public indebtedness, and the circumstances under which they are made, differ so widely that any exhibit of the total without classification must be subject to many just criticisms and objections. Such an exhibit would not in all respects be comparable as between the several cities. To obviate this and to make the statistics of debt for the different cities as comparable as possible, the Bureau of the Census has sought to secure the separation of outstanding obligations into six classes designated as follows: "General bonds," "temporary loans," "revenue loans," "local improvement loans," "public service loans," and "outstanding warrants."

General bonds.—Under "general bonds" the Bureau of the Census instructed its agents to report all long term loans, however designated in law, not specifically assigned by the instructions to the other classes of public debt obligations. Many difficulties were met with in carrying out this instruction, and the separation intended has not in all cases been fully made. The proportion of public debt included under this designation is greater than it should have been, and the other classes of debt securities, as shown, are correspondingly smaller. One reason for this is the fact that many cities group all long term debt obligations under the designation "bonds," whether their amortization is to be made from the proceeds of general taxation or from those of special assessments. For such cities the Census agents undoubtedly did not always go back of the designation of the local officials and separate the "bonds" of the city into the two radically different classes as

was intended by the Census instructions. In like manner, some cities designate as "bonds" loans to be met from the proceeds of the current tax levy already made. In such cities the Census group of "general bonds" has been improperly increased at the expense of the two classes of tax loans designated as "temporary loans" and "revenue loans." It is hoped that with an appreciation on the part of local officials, as well as Census agents, of the importance of the classification, future reports of the statistics of cities containing 25,000 inhabitants may give a classification of municipal indebtedness that will be more nearly correct.

Temporary loans and revenue loans.—Under "temporary loans" and "revenue loans" the Bureau of the Census sought to tabulate exhibits of all short term loans for meeting current municipal expenditures and in anticipation of revenue already provided for but not yet collected. Such loans are made with the expectation, and in most cases with the distinct legal pledge, that their amortization will be met from the current tax levy. The character of these loans is such that on a complete balance sheet at the close of the year outstanding loans of the two classes here mentioned would always be balanced by credits in the form of "collectible taxes" levied but not paid.

The distinction between the "temporary loans" and "revenue loans" under the instructions to the Census agents is as follows: Under "temporary loans" were to be reported all "notes," so called "tax certificates," "tax warrants," and other "short term loans" whose amortization is provided for from the proceeds of a tax levy made and also collectible within the fiscal year of the issue of such loans. The designation "revenue loans" is to include all corresponding municipal obligations whose liquidation is to be met from a tax levy made in the fiscal year of the issue of such loans but not due or collectible until the year next succeeding.

Local improvement loans and public service loans.—Under these two heads the agents of the Census were instructed to report all loans, however designated in law, whose ultimate payment was to be met from the proceeds of special assessments levied upon property specially benefited by the expenditures for meeting which these loans were issued. Such loans were to be classified under the first of these two heads if the expenditures referred to were in the nature of outlays for special improvements, and under the second if the expenditures were incurred in the performance of some municipal service benefiting the property assessed, such as that of sprinkling or cleaning streets, making sewer connection, or some other special service. Both of these classes of special assessments loans should be shown on the balance sheet at the close of the year balanced by the special assessment authorized for their amortization. Such assessments bear the same relation to these loans that tax levies bear to the loans referred to in the section preceding, and in both cases the special assets of tax levies and special assessments correspond to sinking fund assets for other loans of the municipality. Few cities, however, show this fact on the balance sheets or have any trustworthy data relating to the collectible special assessments that should be included among their assets. For cities that properly classify their debt exhibit and fully separate the tax loans and special assessment loans from all other loans the assets above referred to should approximate the amount of such loans. The net debt is the total less sinking fund assets and these special tax and special assessment assets.

It is at this point that the Census exhibit of debts outstanding is undoubtedly open to criticism. Cities for which the Census agents failed to secure the proper separation of tax and special assessment loans from bonds are given an appearance of having fewer tax and special assessment assets than they are entitled to. In like manner the net debt, i. e., the total or gross debt less ordinary sinking fund assets and the special sinking fund assets in the form of uncollected tax levies and special assessments, is made to appear too large. In general it may be said that the foregoing remarks apply to the great majority of cities for which Table 36 shows but relatively small amounts of special assessment loans outstanding. It also applies to such cities as levy taxes in one year and collect them in the next, and in this table are given but relatively few temporary or revenue loans.

In this connection mention should be made of the fact that in most states tax loans and special assessment loans are not considered as belonging to that part of the public debt that is taken into consideration when determining whether the city has reached its borrowing capacity, as defined by charter provisions limiting its debt to a certain percentage of its assessed valuation. The courts have quite generally decided that such loans are outside the charter limitations.

For reasons easily deducible from the facts above stated but little value can be placed upon any conclusions drawn from the table relating to the relative increase in the several classes of loans from 1902 to 1903. It is hoped, however, that the table may call attention to the importance of separating the tax and special assessment loans from other loans, and thus open the way for future improvement in the census and other classifications of debt obligations.

Outstanding warrants.—Special mention is made of the character of one portion of outstanding warrants shown for some cities. New York and some other cities issue on the last business day of the fiscal year warrants for interest payments and debt obligations due the first day of the following year. Such warrants are not, as a rule, paid until the first day of the succeeding year. The exhibit is substantially correct, but none the less wrongfully gives the impression that such cities do not liquidate their expense warrants or vouchers as soon as

presented. There was found no means in the time at the disposal of the Census officials of ascertaining exactly whether the outstanding warrants represented the issuing of warrants the last day of the year to be liquidated the first day of the following year, or indicated the failure to pay all warrants promptly on presentation.

Debt obligations, classified by branch of government issuing.—A glance at Table 36 in connection with Table 19 shows that many cities have independent park, school, and other boards, so far as relates to the custody or management of current funds, that do not give such boards the power to borrow money on long-term loans. Of the total debt outstanding at the close of 1902, and also of 1903, only 4.5 per cent was reported as issued by independent branches, which, under the Census definition, are treated as parts of the municipality.

TABLE 37.

Classes of municipal possessions.—The possessions of cities are of two radically different types, known as *fixed* and *current*. The fixed or capital possessions include all properties obtained through payments for outlays and all securities on other properties held for investment purposes. The current possessions include cash on hand and all other properties provided or held for meeting current expenses.

Fixed possessions are of three distinct types or classes: (1) The first class includes those salable properties which are likewise productive or remunerative, such as the plant and equipment of municipal industries, or the investments of sinking, public trust, and investment funds. Such properties yield a revenue while in possession of the city, and money can be realized from their sale. Hence they are designated in the table as salable and productive possessions. (2) The second class includes public buildings and grounds, public parks, and similar properties which are not obtained or held like the properties last referred to, for securing a revenue, but which like them may be sold. They are here designated as salable but unproductive possessions. (3) The third class includes sewers, streets, pavements, curbing, sidewalks, and similar improvements, which are not productive in the sense of yielding a revenue, and are not salable under ordinary conditions, but which should nevertheless be included in the fixed possessions of the city, since they are permanent improvements representing outlays of money and possessing public utility. These properties may be designated as unsalable and unproductive public works.

The current possessions are of two distinct types: (1) The first includes cash and other properties available for meeting any expense or outlay of the city. (2) The second includes cash and other available possessions ordinarily composed of certain designated revenues that are pledged for meeting specified loans.

The principal current possessions besides cash are taxes and special assessments and other sources of revenue levied or otherwise charged upon the books of the city. The second class of current possessions defined above includes such portion of these revenue possessions as have been pledged or otherwise used as the basis for securing loans.

Very few American cities give in their financial reports fairly correct exhibits of all these five classes of possessions. The majority give no account of their unsalable and unproductive public works, and present statements of current possessions other than cash on such widely differing bases that they can not be used with any profit for comparative statistical purposes. No attempt has, therefore, been made to secure statistics of these classes of possessions, and thus none are presented in this report. For like reason no statistics are presented of liabilities other than those included as debt obligations in Tables 35 and 36, and those involving trust obligations shown in Tables 31, 32, 33, and 34. In Table 37 are presented the data secured with reference to the principal salable possessions of the cities as reported to the Census agents in 1902 and 1903. Those in charge of the work wish to emphasize the fact that these figures for individual cities must, in the great majority of cases, be taken with a liberal allowance for possible and probable error. In comparing these possessions with the debts outstanding as given in Tables 35 and 36, consideration should be given to the fact that none of the tables segregates the indebtedness that has been incurred for unsalable and unproductive public works, and that none of them shows how much has in the past been expended for such possessions. It is hoped that the cities throughout the country may see the importance and value of carefully prepared statements of the original cost of their salable and unsalable possessions or estimates of the cost of reproducing the same.

TABLE 38.

Assessed valuation of property.—The valuation given in Table 38 is the reported valuation of property which is subject to taxation for city purposes. In some states, notably in Pennsylvania, this varies somewhat from the valuation on which taxes for state purposes are levied. The reported basis of assessment in practice is the per cent of estimated true value of property which the city officials state that the assessed valuation constitutes. A slight study of the figures and a comparison of those for the two years 1902 and 1903 will demonstrate how untrustworthy the percentages for the great majority of cities are as in dices of the true value of property. The figures of the table should not be used as a basis of estimates or statements concerning the true value of property. They are valuable only as exhibits relating to municipal taxation.

TABLES 39 TO 44, INCLUSIVE.

Per capita payments and receipts.—Tables 39 to 44, inclusive, summarize certain of the data given in Tables 21 to 35, inclusive, and present per capita averages based

upon the population on June 1, 1902 and 1903, respectively, as estimated by the Bureau of the Census. The payments and receipts given in these tables include the payments and receipts in correction of error. The aggregates of erroneous payments and receipts for which refunds were received and paid are given, as already pointed out in Table 30. These refunds can not be separated from corporate payments and receipts, except in the case of the aggregates shown in Tables 39 and 40. The aggregate corporate payments and receipts, less these refunds, are given in Table 20.

The most important feature of these per capita tables for both 1902 and 1903 consists in the great differences in the amounts of the aggregate payments and receipts, and of the several classes thereof, shown by different cities; many cases are found in which, of two cities, with approximately the same population, one expends two or three times as much as the other for a given class of payments or for the aggregate of all payments. Equally as great variations are found in the per capita payments for the several objects and for all objects, and in the per capita receipts from the several sources of revenue and from all sources.

In a general way the causes of these great variations have been pointed out on page 21 of this bulletin. No special investigation has been made for any particular city, but the data presented in the tables have been arranged with a view to exhibiting fully all these differences, and thus bringing them to the attention of all students of American municipal finance. The subject will be found well worthy of their careful consideration.

In a few cases a small part of the variation disclosed by the tables will no doubt be found to have arisen from imperfections in the estimates of population upon which the per capita calculations were based. In others they may be due to actual errors in the Census reports of payments and receipts. The arrangement of the various tables is designed to bring all such possible errors to the front, with the object of securing data for their elimination from future reports.

Another fact disclosed by these per capita tables is that in all municipalities expenditures and the burden of taxation increase faster than population, the per capita figures being, in almost all cases, greater in the large cities than in those of smaller size. For most of the objects of payments and sources of receipts given in Tables 39 to 44 the per capita figures for the several groups of cities form a more or less regular series from the cities containing less than 50,000 inhabitants up to the five largest cities mentioned. The exceptions to this rule will be specially considered in the brief comments on the several tables.

The relatively large payments and receipts in the cities of highest rank in population are even more strikingly revealed if the data for the cities of Group I are subdivided into two groups, the first including New York, Chicago, Philadelphia, St. Louis, and Boston, and the second the other nine cities of the group mentioned. For the five cities named the aggregate corporate payments and receipts, as well as those for nearly all the principal objects of payments and sources of receipts, are more than twice as great as those for all of the cities containing between 25,000 and 50,000 inhabitants each. This subdivision of Group I is employed in the analysis of per capita corporate payments and receipts given below.

Analysis of per capita corporate payments.—Corporate payments are classified in Table 39 according to the principal objects for which made. The per capita corporate payments for the several groups of cities are as follows:

	1903					1902				
	Total.	For general and municipal service expenses.	For municipal investment and industrial expenses.	For outlays.	For decrease of indebtedness.	Total.	For general and municipal service expenses.	For municipal investment and industrial expenses.	For outlays.	For decrease of indebtedness.
Total (160 cities)	$24.79	$15.24	$1.13	$8.13	$0.29	$22.50	$15.08	$0.96	$6.13	$0.33
Group I:										
First five cities	33.44	19.23	1.49	12.51	0.21	29.95	19.83	1.28	8.84	.....
Other nine cities	20.69	13.83	0.92	5.70	0.24	19.57	13.49	0.82	5.12	0.14
Group II	21.32	13.96	0.92	6.03	0.41	20.04	13.48	0.75	4.89	0.92
Group III	18.54	12.29	0.88	5.04	0.38	17.92	12.20	0.83	4.40	0.49
Group IV (78 cities)	17.26	10.96	0.91	5.08	0.31	13.91	9.32	0.69	3.46	0.44

A comparison of the per capita payments in 1902 and 1903, for general and municipal service expenses in the 160 cities considered as a whole, reveals but little difference between the two years. There was a slight increase for each of the groups except the first one, in which New York alone showed an increase. Of the decreases in the other four cities of this group, that in St. Louis is the most marked; it is explained by the large expenditure in 1902 for the Louisiana Purchase Exposition.

The per capita payments for municipal investment and industrial expenses show an increase for the 160 cities and for each of the five groups; this increase was smallest in the group of cities containing from 50,000 to 100,000 inhabitants, and greatest in that with cities containing from 100,000 to 300,000 inhabitants.

The tables for 1902 and 1903 show marked variations in the payments for all expenses for the cities of Denver, Colo., Dallas, Tex., and Dayton, Akron, and Springfield, Ohio. The first two mentioned show an increase, due mainly to an extension of the city's territory, and also, in the case of Denver, to a combination of the city and county governments; in the case of the three Ohio cities there is a marked decrease, the payments for 1903 being for a period less than twelve months, owing to changes in the fiscal years of the cities.

The greatest differences in the corporate payments for the two years are those shown for outlays. For the 160 cities the per capita payments for outlays increased from $6.13 to $8.13, or 32.5 per cent. An increase is shown for each of the groups, the largest actual increase being for that comprising the 5 largest cities.

The net per capita payments for reducing indebtedness showed little change for the 160 cities as a whole. An increase is shown for each of the subdivisions of the first group of cities, and decreases for each of the other groups.

Analysis of per capita corporate receipts.—Tables 40 and 41 present for each city a classified summary of corporate receipts, agreeing in its essential features with the summary presented in Table IV, on page 29 of the introductory text. The per capita corporate receipts for the several groups of cities are as follows:

	1903				1902			
	Total.	From general revenues.	From commercial revenues.	From loans increasing indebtedness.	Total.	From general revenues.	From commercial revenues.	From loans increasing indebtedness.
Total (160 cities)	$25.13	$15.95	$4.94	$4.24	$22.97	$15.70	$4.42	$2.85
Group I:								
First five cities	33.66	19.70	6.03	7.95	30.52	20.01	5.34	5.16
Other nine cities	20.84	14.63	4.69	1.52	19.96	14.53	4.10	1.33
Group II	21.91	15.38	4.62	1.91	20.12	14.64	4.35	1.13
Group III	19.04	12.82	4.27	1.95	18.38	12.70	3.94	1.74
Group IV (78 cities)	17.58	11.60	3.47	2.51	14.68	10.12	2.89	1.67

The aggregate corporate receipts for the 160 cities show variations which correspond quite closely with those for corporate payments. Marked changes in the relative receipts from the several sources are confined to a limited number of cities.

The per capita receipts from general revenues decreased in the group composed of the 5 largest cities and in the group of cities containing less than 50,000 inhabitants, but increased in the other groups, although no marked change is recorded in any instance. The per capita receipts from this source increased in a more or less regular manner, except for the group of 9 smaller cities containing over 300,000 inhabitants. The special factors operative in these cities to produce this one exception are not apparent on the surface.

In the receipts from specified general revenues given in Table 41 there are but few noteworthy changes in the two years, and in none is the cause apparent.

The per capita receipts from commercial revenues increased in each group of cities, but the increase was greater, both actually and relatively, for the larger cities than for the smaller. In the case of receipts from commercial revenues, as with receipts from general revenues, there seem to be special factors which modify the increase for the 9 smaller cities of Group I. With this exception, the per capitas form a series from the group of smallest cities to that of cities with the largest population.

The per capita receipts from loans increasing indebtedness, like the per capita payments for outlays, show material increases. This indicates that for the average city the increase in the payments for outlays was accompanied by an increase in outstanding indebtedness. For the 160 cities the per capita receipts from such loans increased from $2.85 in 1902 to $4.24 in 1903. The increases in the several groups correspond in general to those in the per capita payments for outlays, to which attention has already been specifically directed.

Payments for schools.—The total and per capita payments for the salaries of school teachers, given in Table 44, show a marked agreement for the two years. The per capitas for the 160 cities are practically identical, varying by only 1 cent; and almost equally small variations are shown for the several groups of cities.

Per capita payments for miscellaneous expenses and for outlays were greater in 1903 than in 1902. For the 160 cities the increase for miscellaneous expenses was from $0.94 to $1.11, and for outlays from $0.77 to $0.97.

Payments for specified expenses and outlays.—Table 44 shows the payments for expenses of libraries, art galleries, museums, etc., and Table 43 shows those for certain other purposes. For most of these payments the per capita figures for 1903 are practically the same as those for 1902. The general tendency toward an increase in per capita payments along with the increase in the size of cities is least marked in the case of payments for fire departments, schools, and public highways, and most marked in the case of payments for police departments, public sanitation, public recreation, interest, and expenses of municipal industries; all of these are given in Tables 42, 43, and 44, with the exception of payments for expenses of municipal industries, which are shown in Table 39.

YEARS COVERED BY THE INVESTIGATION.

The general principles followed in determining the fiscal year covered by this investigation have already been explained (see page 19). The same principles were followed in selecting the administrative years for which statistics are given in Tables 1 to 18.

The date of the close of the fiscal years covered by the financial statistics presented in Tables 19 to 44 is given for each of the branches or departments of the several cities in Table 19. The date of the close of the administrative years covered by Tables 1 to 18 is given in the following statement:[1]

[1] The close of years for liquor licenses was not reported, hence they are not included in this statement.

City number.	CITY OR MUNICIPALITY.	Dates of ending of years covered by investigation.
1	New York, N. Y	Schools, July 31, 1902 and 1903; libraries and street railways, June 30, 1903 and 1904; all other departments, December 31, 1902 and 1903.
2	Chicago, Ill	Schools, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
3	Philadelphia, Pa	December 31, 1902 and 1903.
4	St. Louis, Mo	Schools, June 30, 1903 and 1904; libraries, April 30, 1903 and 1904; divorces, December 31, 1902 and 1903; streets and parks, April 13, 1903, and April 11, 1904; all other departments, March 31, 1903 and 1904.
5	Boston, Mass	Police department, November 30, 1902 and 1903; schools, June 30, 1902 and 1903; marriages and divorces, December 31, 1902 and 1903; street railways, September 30, 1902 and 1903; all other departments, January 31, 1903 and 1904.
6	Baltimore, Md	December 31, 1902 and 1903.
7	Cleveland, Ohio	Schools, August 31, 1902 and 1903; all other departments, December 31, 1902 and 1903.
8	Buffalo, N. Y	Police department, libraries, marriages, and divorces, December 31, 1902 and 1903; all other departments, June 30, 1903 and 1904.
9	San Francisco, Cal	Marriages and divorces, December 31, 1902 and 1903; all other departments, June 30, 1903 and 1904.
10	Pittsburg, Pa	Fire department, marriages and divorces, December 31, 1902 and 1903; schools, June 1, 1903, and June 6, 1904; all other departments, January 31, 1903 and 1904.
11	Cincinnati, Ohio	Schools, August 31, 1902 and 1903; libraries and divorces, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
12	Milwaukee, Wis	Police department, March 31, 1903 and 1904; schools, June 30, 1903 and 1904; libraries, August 31, 1902 and 1903; all other departments, December 31, 1902 and 1903.
13	Detroit, Mich	Libraries, marriages, divorces, and street railways, December 31, 1902 and 1903; all other departments, June 30, 1903 and 1904.
14	New Orleans, La	Schools, June 30, 1902 and 1903; building permits, August 31, 1902 and 1903; all other departments, December 31, 1902 and 1903.
15	Washington, D. C	Marriages and divorces, December 31, 1902 and 1903; all other departments, June 30, 1903 and 1904.
16	Newark, N. J	Schools, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
17	Jersey City, N. J	Police and fire departments, marriages, and divorces, December 31, 1902 and 1903; all other departments, November 30, 1902 and 1903.
18	Louisville, Ky	Schools, June 30, 1903 and 1904; public works, marriages, and divorces, December 31, 1902 and 1903; parks, November 30, 1902 and 1903; all other departments, August 31, 1902 and 1903.
19	Minneapolis, Minn	Schools, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
20	Indianapolis, Ind	Schools and libraries, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
21	Providence, R. I	Schools, June 27, 1902, and June 26, 1903; streets and parks, September 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
22	Kansas City, Mo	Schools and libraries, June 30, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; all other departments, April 20, 1903, and April 18, 1904.
23	St. Paul, Minn	Schools, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
24	Rochester, N. Y	Schools, June 30, 1902 and 1903; libraries, May 31, 1903 and 1904; all other departments, December 31, 1902 and 1903.
25	Denver, Colo	Schools, June 30, 1903; all other departments, December 31, 1902 and 1903.
26	Toledo, Ohio	Schools, August 31, 1902 and 1903; all other departments, December 31, 1902 and 1903.
27	Allegheny, Pa	Schools and school library, June 1, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; all other departments, February 28, 1903, and February 29, 1904.
28	Columbus, Ohio	Schools, August 31, 1902 and 1903; divorces, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
29	Worcester, Mass	Marriages and divorces, December 31, 1902 and 1903; all other departments, November 30, 1902 and 1903.
30	Los Angeles, Cal	Schools, June 30, 1902 and 1903; marriages and divorces, December 31, 1902 and 1903; all other departments, November 30, 1902 and 1903.
31	New Haven, Conn	Schools, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
32	Syracuse, N. Y	Schools, July 31, 1902 and 1903; libraries, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
33	Fall River, Mass	Schools, June 27, 1902 and 1903; all other departments, December 31, 1902 and 1903.
34	Memphis, Tenn	Schools, June 30, 1902 and 1903; public works, June 30, 1903; all other departments, December 31, 1902 and 1903.
35	Omaha, Nebr	Schools, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
36	Paterson, N. J	Schools and charities, February 28, 1903, and February 29, 1904; libraries, February 1, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; all other departments, March 20, 1903 and 1904.
37	St. Joseph, Mo	Police department and charities, April 15, 1903 and 1904; schools, June 30, 1903 and 1904; libraries, April 30, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; all other departments, April 20, 1903, and April 18, 1904.
38	Scranton, Pa	Police department, February 1, 1903 and 1904; schools, June 30, 1903 and 1904; charities, April 6, 1903, and April 4, 1904; all other departments, December 31, 1902 and 1903.
39	Lowell, Mass	Police department, May 31, 1903 and 1904; schools, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
40	Portland, Oreg	Schools, June 24, 1903 and 1904; all other departments, December 31, 1902 and 1903.
41	Cambridge, Mass	Schools, June 30, 1902 and 1903; marriages and divorces, December 31, 1902 and 1903; all other departments, November 30, 1902 and 1903.
42	Atlanta, Ga	Schools, June 10, 1902 and 1903; all other departments, December 31, 1902 and 1903.
43	Albany, N. Y	Schools, August 31, 1902 and 1903; public works, September 30, 1902 and 1903; marriages and divorces, December 31, 1902 and 1903; all other departments, October 31, 1902 and 1903.

147	Sacramento, Cal	Fire department and libraries, July 31, 1902 and 1903; schools, June 30, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; all other departments, January 3, 1903, and January 2, 1904.
148	La Crosse, Wis	Schools, June 30, 1902 and 1903; libraries, April 15, 1903, and April 13, 1904; all other departments, December 31, 1902 and 1903.
149	Oshkosh, Wis	Schools and libraries, June 30, 1902 and 1903; marriages and divorces, December 31, 1902 and 1903; all other departments, October 1, 1902 and 1903.
150	Newport, Ky	Schools, June 30, 1902 and 1903; all other departments, December 31, 1902 and 1903.
151	Williamsport, Pa	Schools, June 1, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; charities, October 1, 1902 and 1903; all other departments, March 31, 1903 and 1904.
152	Pueblo, Colo	Schools, June 30, 1902 and 1903; libraries, April 30, 1903, and December 31, 1903; public works, April 30, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; all other departments, March 31, 1903, and December 31, 1903.
153	Council Bluffs, Iowa	Schools, June 5, 1902 and 1903; libraries, marriages, and divorces, December 31, 1902 and 1903; all other departments, March 31, 1903 and 1904.
154	New Britain, Conn	Schools, June 23, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; all other departments, March 31, 1903 and 1904.
155	Kalamazoo, Mich.[1]	Schools, June 17, 1904; libraries, June 30, 1904; marriages and divorces, December 31, 1903; streets and parks and charities, April 30, 1904; all other departments, March 31, 1904.
156	Everett, Mass.[1]	Schools, June 30, 1903; all other departments, December 31, 1903.
157	Cedar Rapids, Iowa	Schools, June 13, 1902, and June 5, 1903; all other departments, December 31, 1902 and 1903.
158	Lexington, Ky	Schools, June 30, 1902 and 1903; libraries, April 10, 1903 and 1904; all other departments, December 31, 1902 and 1903.
159	Bay City, Mich	Schools, June 30, 1903 and 1904; libraries, April 15, 1903 and 1904; public works, marriages, and divorces, December 31, 1902 and 1903; all other departments, March 22, 1903 and 1904.
160	Fort Worth, Tex	Schools, June 30, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; all other departments, March 21, 1903 and 1904.
161	Easton, Pa	Schools and libraries, June 30, 1903 and 1904; marriages and divorces, December 31, 1902 and 1903; all other departments, March 31, 1903 and 1904.
162	Gloucester, Mass	Schools, June 30, 1902 and 1903; marriages and divorces, December 31, 1902 and 1903; all other departments, November 30, 1902 and 1903.
163	West Hoboken, N. J.[1]	Schools, June 30, 1904; marriages and divorces, December 31, 1903; all other departments, April 30, 1904.
164	North Adams, Mass.[1]	Schools, June 30, 1903; marriages and divorces, December 31, 1903; all other departments, November 30, 1903.
165	Quincy, Mass.[1]	Schools, June 30, 1903; all other departments, December 31, 1903.
166	Colorado Springs, Colo.[1]	Schools, June 30, 1904; marriages and divorces, December 31, 1903; all other departments, February 29, 1904.
167	Hamilton, Ohio[1]	Schools, August 31, 1903; libraries, March 31, 1904; divorces, June 30, 1903; all other departments, December 31, 1903.
168	Orange, N. J.[1]	Schools, June 30, 1904; libraries, January 1, 1904; marriages and divorces, December 31, 1903; all other departments, March 31, 1904.
169	Lima, Ohio[1]	Divorces, December 31, 1903; all other departments, March 31, 1904.
170	Kingston, N. Y.[1]	Schools, July 31, 1904; libraries, June 30, 1904; public works, February 29, 1904; all other departments, December 31, 1903.
171	Newburg, N. Y.[1]	Fire department, May 31, 1904; schools and libraries, June 30, 1903; marriages and divorces, December 31, 1903; all other departments, March 1, 1904.
172	Aurora, Ill.[1]	Schools, June 30, 1903; libraries, May 31, 1904; all other departments, December 31 1903.
173	Nashua, N. H.[1]	Schools, June 30, 1903; all other departments, December 31, 1903.
174	Jackson, Mich	Police department and libraries, April 30, 1903 and 1904; schools, September 5, 1902 and 1903; marriages and divorces, December 31, 1902 and 1903; all other departments, February 28, 1903, and February 29, 1904.
175	Meriden, Conn.[1]	Schools, September 1, 1903; libraries, June 30, 1903; marriages and divorces, December 31, 1903; all other departments, November 30, 1903.

[1] Not included in the report for 1902.

FINDING LIST OF CITY NUMBERS.

It has already been explained that throughout the general tables the cities have been arranged and numbered according to their estimated population June 1, 1903. For convenience in finding any particular city, the following list has been prepared, the cities being arranged alphabetically by states and territories, and the city number assigned to each indicated:

CITY AND STATE.	City number.
Alabama:	
Birmingham	96
Mobile	102
Montgomery	131
Arkansas:	
Little Rock	97
California:	
Los Angeles	30
Oakland	57
Sacramento	147
San Francisco	9
Colorado:	
Colorado Springs[1]	166
Denver	25
Pueblo	152
Connecticut:	
Bridgeport	53
Hartford	47
Meriden[1]	175
New Britain	154
New Haven	31
Waterbury	73
Delaware:	
Wilmington	51
District of Columbia:	
Washington	15
Florida:	
Jacksonville	137
Georgia:	
Atlanta	42
Augusta	100
Savannah	63
Illinois:	
Aurora[1]	172
Chicago	2
East St. Louis	123
Joliet	144
Peoria	65
Quincy	115
Rockford	129
Springfield	124
Indiana:	
Evansville	66
Fort Wayne	86
Indianapolis	20
South Bend	103
Terre Haute	109
Iowa:	
Cedar Rapids	157
Council Bluffs	153
Davenport	114
Des Moines	62
Dubuque	112
Sioux City	130
Kansas:	
Kansas City	69
Topeka	108
Wichita[1]	140
Kentucky:	
Covington	90

Wheeling	104
Wisconsin;	
La Crosse	148
Milwaukee	12
Oshkosh	149
Racine	141
Superior	120

[1] Not included in the report for 1902.

APPENDIX.

SPECIAL FEATURES OF THE TAX SYSTEM IN CERTAIN SPECIFIED CITIES.

SPECIFIC LEVIES OF THE GENERAL PROPERTY TAX.[1]

Practically all specific levies of the general property tax are levied under municipal enactment rather than under state law. Their object is usually to meet local needs of a temporary nature, hence the wide variety of such taxes reported even by cities of the same state.

Baltimore, Md.—Baltimore reported a collection of specific levies in 1902 and 1903. The amounts reported represent the specific levies of the third class described on page 35, viz, a special lower rate levied upon property in an annexed or suburban district.

Cleveland, Ohio.—The specific levy reported by this city for 1903 was for sewer district taxes.

Buffalo, N. Y.—In Buffalo specific levies amounting to $131,611 were collected in 1902. These taxes were called "lamp taxes" and were levied upon all property in proportion to the assessed valuation, except property in certain districts where the streets are not lighted. The proceeds of the taxes were used to meet the expense of street lighting.

Pittsburg, Pa.—Specific levies were collected in Pittsburg in 1902 and 1903. Of the amounts reported the greater portion represents the proceeds of the taxes levied by the various school subdistricts, which are independent of the city. The city makes an appropriation for "Central board school expenses," but levies no general school tax separate and distinct from city taxes. In addition, a small amount of specific levies was reported, the character of which was not definitely ascertained.

Milwaukee, Wis.—Milwaukee realized $622,027 from specific levies in 1902, divided as follows: For ward purposes, $531,000; for interest fund, sewerage bonds, $19,031; for sinking fund, sewerage bonds, $28,500; joint district school taxes (sixth, eighth, and sixteenth districts), $3,496; for sewerage purposes, $40,000. The city is divided into three sewer districts, the rate of taxation varying in each. Further, each ward raises a tax for the use of that ward only, the rates varying according to the requirements of each ward.

The purposes for which the $625,016 reported in 1903 was raised were substantially the same as in 1902.

Minneapolis, Minn.—The specific levies collected in Minneapolis in 1902 and 1903 are made up of special ward taxes for street maintenance, the rates in the several wards varying according to their respective requirements.

Kansas City, Mo.—In Kansas City the amounts reported were collected from a specific levy of 3 mills on certain districts of the city for park purposes.

St. Paul, Minn.—No specific levies were reported for St. Paul, but attention is called to the following fact: The city is divided into ten assessment districts, of which the territory in districts 7, 9, and 11 having been recently acquired does not bear any part of the taxes for interest on bonds, benefits from which were not participated in by these districts.

Denver, Colo.—The specific levy reported in Denver in 1903 was applicable to certain outlying school districts that had recently been consolidated with the city. The proceeds were used for meeting the old indebtedness of these districts.

[1] See page 35, and Table 24.

Los Angeles, Cal.—Los Angeles reported small amounts in 1902 and 1903, the proceeds of a specific levy applied only to property within the limits of former Rosedale school district.

New Haven, Conn.—In New Haven certain outlying districts were taxed at a special lower rate in 1902 and 1903. The table gives the proceeds of the lower rate.

Memphis, Tenn.—Specific levies were collected in Memphis in 1902 and 1903. The amounts reported represent the proceeds of a levy at an additional rate upon property in 11 wards of the city. These 11 wards comprise the more densely populated portion of the city.

Albany, N. Y.—In Albany portions of the eighteenth and nineteenth wards do not have fire and police protection and are subject to a lower rate of taxation than is required from the rest of the city. The specific levies reported in 1902 and 1903 represent the approximate amounts realized from the taxes at a lower rate.

Bridgeport, Conn.—Bridgeport has two taxation districts. The first, comprising the entire area, was taxed at one rate; and the second, made up of the more densely populated portion of the city, bore an additional tax. The amounts reported as special property taxes represent the proceeds of the additional levy upon the assessed valuation of the second district.

Des Moines, Iowa.—In Des Moines specific levies were collected for the following purposes: (1) A special rate levied upon property lying within the "light and water district." This tax is commonly termed the "light and water tax." (2) A special "road tax" upon farm or agricultural lands in excess of 10 acres (not platted) levied in lieu of other city taxes. (3) A special "bond and bond interest tax" levied only upon property within the "old" city limits on account of the debt contracted in which the annexed portions of the city did not participate.

San Antonio, Tex.—Specific levies of taxes are collected for local improvements for particular districts. Reports of the proceeds of such levies were secured for 1903, but not for 1902.

Waterbury, Conn.—Waterbury is divided into three taxation districts. The first district comprises the entire area, and the rate of taxation in 1902 was 3.7 mills. In the second district, known locally as the "second inside" district, the rate was 9.5 mills. In the third district, known locally as the "second outside" district, the rate was 7.5 mills. The amounts reported as collected from specific levies represent the proceeds of the additional rate levied upon the "second inside" and "second outside" districts. The character of the tax in 1903 was the same.

Kansas City, Kans.—Special taxes for payment to sinking fund for liquidation of debt of village of Wyandotte annexed to city.

Akron, Ohio.—The specific levies of Akron were in connection with the sewer districts. Three sewer districts were laid out within the city limits, each being made subject to special property taxes at differing rates.

Dallas, Tex.—The specific levies reported by Dallas represent the proceeds of an additional levy of 5 mills on all property in what is known as the "old corporation." It is imposed for the purpose of paying the interest and principal of railroad subsidy bonds issued by the "old corporation."

Schenectady, N. Y.—Schenectady reported $33,103 as receipts from specific levies in 1902. This amount represents the proceeds of an additional rate of 25 cents on each $100 of property located within the so-called "lamp district." It is levied for street lighting purposes.

Little Rock, Ark.—In Arkansas the laws permit the city to be subdivided into taxation districts for any purposes of local improvement. The $13,649 reported in 1902 as specific levies represents the aggregate amount collected in the several taxation districts under the above-mentioned law. The territory included within these taxation districts rates the taxes and the city collects and expends them.

Johnstown, Pa.—The city of Johnstown has from time to time annexed outlying boroughs. Upon annexation the city has assumed the debts of these boroughs, with the exception of that of Woodvale. The school district of Johnstown, however, refused to assume any of the obligations of any of these annexed boroughs, and the boroughs in turn refused to pay anything on the debts contracted before they were annexed; consequently specific levies are imposed upon certain wards of the city for payment of bonds and interest.

McKeesport, Pa.—The specific levies reported for this city were for payment of principal and interest on certain "road aid bonds" issued in 1876. The tax is levied only upon that portion of the city incorporated in 1876. The territory acquired since then and incorporated within the city limits pays nothing on this debt.

Dubuque, Iowa.—The specific levies reported for Dubuque comprise the proceeds of a special water tax at the rate of 1 mill, and a special sprinkling tax levied at the rate of three-fifths of a mill. The special water tax was originally imposed for fire protection purposes before the city purchased waterworks, and was a tax upon realty within certain limits. Subsequently the limits were extended to include the entire area of the city, but the tax is still imposed upon realty, and in order to keep it alive it has been applied to the waterworks bond account. The sprinkling tax, also, is levied upon real property values only and is limited to five districts comprising about one-fourth of the area of the city. It was found impossible to ascertain what portion of the total amount was realized from the water tax and what portion from the sprinkling tax.

Davenport, Iowa.—The specific levy reported for this city represents a tax of 5 mills on the dollar, levied upon all land within the city limits used for agricultural purposes. The amounts realized from this tax were distributed to the first, third, and fourth district road funds.

Superior, Wis.—The specific levies reported by this city in 1903 were those collected for certain sewer districts.

Jacksonville, Fla.—The portion of the city situated outside of the fire and water limits is subject to a lower rate of tax levy than the remainder of the city. The special rates collected in the outlying districts are given as specific levies.

Sioux City, Iowa.—The specific levies collected in Sioux City comprise a "light district tax," and a "road tax" levied upon lands within the city limits used for agricultural purposes. The agricultural land tax is levied in lieu of all other corporation taxes.

Auburn, N. Y.—The specific levies collected in Auburn are for the purpose of sewer construction and maintenance, the city being divided into "sewer districts." A specific levy is collected from the real and personal property of each district to meet the expenses of constructing sewers and to pay the principal and interest on bonds issued by the city on account of sewer construction in that district.

Newport, Ky.—Specific levies were collected in this city upon all property in certain districts to pay for bond indebtedness incurred for building sewers. This tax differs from a special assessment in that it is levied upon all property within a given district at a common rate.

Pueblo, Colo.—Specific levies were collected in Pueblo in 1902 and 1903. The collections represent the proceeds of specific levies upon certain divisions of the city for interest on bonds, board of public works, sinking fund, school districts 1 and 20, and school district sinking fund.

Council Bluffs, Iowa.—The specific levies reported by this city in 1903 were for special road taxes collected on farm lands within city limits.

SPECIAL PROPERTY AND BUSINESS TAXES.[1]

In the analysis which follows the cities are grouped by states. The order of discussion is determined by the rank of the states in amount of total receipts from special property and business taxes.

Massachusetts.—The following tables show for the several cities of Massachusetts the total amount of special property and business taxes collected in 1902 and 1903, consisting of the amounts realized from the tax on the securities of street railways, national banks, and other corporations, and on ships in foreign trade:

TABLE A.—*Specified classes of special property and business taxes in Massachusetts, by cities.*

1902.

	Total.	Street railways.	National banks.	Other corporations.	Tax on ships in foreign trade.

[1] See page 35, and Table 24.

[2] Will appear in 1904 report.

The total receipts shown in the above table for 1902, $2,685,864, constitute about 1.0 per cent of the aggregate of all tax receipts for the United States. The corresponding amount for 1903 was $2,994,412. All but $64,045 reported in 1902 and $63,776 in 1903 was derived from the taxation of corporation securities under the general corporation tax law, also known as the general franchise tax or tax on corporate excess. In 1902, $57,831 was realized by the city of Boston from a special excise tax on street railways, while $6,214 represents the proceeds of the tax on ships in foreign trade. The corresponding amounts in 1903 were $63,522 and $254, respectively. It should be stated that the tax on national bank stock is levied under the provisions of a special statute which contains certain minor modifications of the general corporation tax law. All of these taxes are paid directly to the state by the corporations, the receipts therefrom being distributed to the several cities and towns in proportion to the number of shares owned or miles of street railway track located in each. Shares are assessed at their market value, certain deductions being made for real estate and other items locally taxed.

Ships and vessels engaged in the foreign carrying trade are taxable to the owners thereof in their places of residence in proportion to their several interests therein. The basis of the tax is net income as determined by dividends paid.

New York.—The following tables show for the cities of New York the revenue derived in 1902 and 1903 from the several special property and business taxes:

TABLE B.—*Specified classes of special property and business taxes in New York, by cities.*

1902.

	Total.	Tax on bank shares.	Tax on fire insurance companies.	Frontage tax.
All cities	$2,390,866	$2,191,727	$174,177	$24,962
New York	2,180,092	2,019,650	160,442	.....
Rochester	27,782	27,782	.....	.....
Syracuse	43,004	22,837	5,320	14,847
Albany	38,505	34,765	3,740	.....
Troy	20,998	20,998	.....	.....
Utica	32,180	30,114	2,066	.....
Yonkers	4,578	4,578	.....	.....
Schenectady	5,740	5,740	.....	.....
Binghamton	17,518	7,403	.....	10,115
Elmira	15,972	14,231	1,741	.....
Auburn	4,497	3,629	868	.....

1903.

	Total.	Tax on bank shares.	Tax on fire insurance companies.	Frontage tax.
All cities	$3,043,333	$2,898,132	$118,327	$26,874
New York	2,667,661	2,566,059	101,602	.....
Buffalo	108,318	108,318	.....	.....
Rochester	38,630	38,630	.....	.....
Syracuse	44,939	22,157	6,352	16,430

Binghamton	18,190	7,746	.....	10,444
Elmira	7,786	6,581	1,205	.....
Auburn	6,911	5,777	1,134	.....
Kingston	13,469	13,469	.....	.....
Newburg	14,201	14,201	.....	.....

The total amount of special property and business taxes collected by New York cities in 1902 was $2,390,866, or 32.95 per cent of the aggregate of similar taxes for the United States. The corresponding total in 1903 was $3,043,333, or 34.33 per cent. Of this amount the greater part represents the proceeds of the tax on bank shares. This is a tax of 1 per cent upon the value of the shares, such value being determined by adding together the amount of the capital stock, surplus, and undivided profits, and by dividing the result by the number of outstanding shares. The tax is assessed against the owners of the shares, not in the district of their residence, but in the district where the bank is located. The bank advances the tax, deducting the same from its dividends. No receipts from this source were reported by Buffalo in the fiscal year 1902, as the tax was not turned into the treasury until 1903, and hence appears among the receipts for that year.

A tax of 2 per cent upon the gross premium receipts of foreign fire insurance companies is required by law to be paid by the agents of such companies to the treasurer of the firemen's relief association in each city having a paid fire department. In certain municipalities the city treasurer acts as treasurer of the relief association for the purpose of receiving this tax. In such cases the tax is commonly included among other revenue receipts on the city books and expended to the fire department for pensions. It is probable that each city, except Buffalo, which is specifically exempt, received this tax, but in a number of instances no separate account was kept therewith and it was found impossible to separate the same from the general tax receipts.

The frontage tax reported in Syracuse and Binghamton is a tax at a fixed rate per front foot upon all property on streets having water mains. It is raised for the general benefit of the water department. In Syracuse the law provides that in case city water is used in buildings occupying any lands so taxed, the amount of the tax is deducted from the water rate. In practice, however, the tax is not collected where the water rate equals or exceeds the tax. The rate is 5 cents per linear foot frontage.

In Binghamton the water commissioners are authorized to levy and collect a frontage tax in each and every year on all real estate lying along or facing on either side of any street or alley in which a water main is now laid, or may hereafter be laid, said frontage tax not to exceed in any one year 50 cents for each 25 feet frontage or fraction thereof of any and all tracts or parcels of land lying along * * * any such street or alley; and the money collected on such tax shall be applied to the maintenance of the water supply of said city or the payment of interest on outstanding water bonds.

It will be noted that these taxes bear a certain resemblance to ordinary special assessments. The proceeds of the tax, however, are not devoted to any specific improvement nor to a specific service which conveys a measurable benefit upon the property taxed. It may be viewed as a tax to supplement the water rate, or more specifically to place a share of the burden of maintaining a water system upon unimproved property which would escape such burden providing the system were supported exclusively by rates.

Missouri.—The city of St. Louis in 1902 realized $705,280, and in 1903, $816,999, from the so-called merchants' and manufacturers' tax. This is a tax collected from merchants and manufacturers on stock, raw product, and total amount of business transacted during the year. In addition, the tax includes certain fixed charges in the nature of licenses for the privilege of doing business. It is seen, therefore, that this tax is at once a combination of a license, a property tax, and a gross earnings or income tax. It was found impossible to separate the receipts derived therefrom into the three classes of revenue just mentioned or to determine which element yielded the largest amount. The tax appears to be merely an additional contribution to the general municipal fund, and general fund of the school district. The amount contributed to the latter in 1902 was $203,295. For the levying of this tax the city is divided into two districts, one comprising "that portion of the city east of the boundary line as established by an act of the general assembly * * * approved March 4, 1870," in which district the rate is one-fifth of 1 per cent; and the other, "that portion of the city denominated in the present charter as 'extended limits,'"

in which the rate is one-tenth of 1 per cent. These rates apply to value of stock and raw material only, the rate for sales being $1 on each $1,000 or fractional part thereof.

District of Columbia.—An aggregate of $353,915 was collected by the city of Washington in 1902 from special property and business taxes, and in 1903, $327,053. A tax of 6 per cent on the gross earnings of banks and trust companies yielded $96,153 in 1902 and $99,560 in 1903; a 4 per cent rate on the gross earnings of building and loan associations, $37,581 in 1902 and $23,863 in 1903; 1½ per cent of the gross premium receipts of insurance companies, $52,813 in 1902 and $55,438 in 1903. Street railway companies, gas companies, and electric light companies pay gross earnings taxes of 4, 5, and 6 per cent, respectively. The aggregate amount received from these three classes of public-service corporations was $167,368 in 1902 and $148,192 in 1903.

Maryland.—In the fiscal year 1902 Baltimore received a revenue of $286,617 from taxes on mortgages and securities. The corresponding receipts in 1903 were $282,230. All mortgagees or assignees holding mortgages of record in the state of Maryland are required by law (Laws of 1903, art. 81, sec. 186; 1896, ch. 120) to pay an annual tax of 8 per cent upon the gross amount of interest covenanted to be paid each year to the said mortgagee or his assigns by the mortgagor. One-fourth of the amount collected is paid to the state; the balance in Baltimore accrues to the general fund. The tax on securities is best described by the following citation:

> All bonds, certificates of indebtedness, or evidence of debt, in whatsoever form made or issued by any public or private corporation of this state or any other state, territory, district, or foreign country, or issued by any state (except the state of Maryland), territory, district, or foreign country not exempt from taxation by the laws of this state, and owned by residents of Maryland, shall be subject to valuation and assessment to the owners thereof in the county or city in which such owners may respectively reside, and they shall be assessed at their actual value in the market, and such upon which no interest shall be actually paid shall not be valued at all, and upon such valuation the regular rate of taxation for state purposes shall be paid, and there shall also be paid on such valuation thirty cents (and no more) on each one hundred dollars for county, city, and municipal taxation in such county or city of this state in which the owner may reside.
>
> All shares of stock or shares in any bank other than a national bank, or in any company or corporation incorporated by or located in and doing business in any other state, or District of Columbia, or in any territory or foreign country, owned by residents of this state, shall be valued and assessed for the purposes of state, county, and municipal taxation to the owners thereof in the county or city in which such owners may reside, and said shares shall be assessed and valued at their actual value in the market, and those upon which no dividend shall be actually paid shall not be valued at all; and upon the valuation so made the regular rate of taxation for state purposes shall be paid, and there shall also be paid on such valuation thirty cents (and no more) on each one hundred dollars for county, city, and municipal taxation in such county or city of this state in which the owners may reside. (Laws 1903, art. 81, sec. 214; 1896, ch. 143.)

In 1902 the tax on mortgages yielded $22,301, and that on the market value of corporation securities, $264,316, and in 1903 a total tax of $282,230 was realized from these sources.

Connecticut.—With "special property and business taxes" are included, in Connecticut, the receipts from a tax known as "the corporation and bank stock tax." Every bank, national banking association, trust, insurance, investment, and bridge company whose stock is not exempt is required by law (Public Acts, 1901) to file annually with the state tax commissioner a statement of its shares, market value thereof, name and residence of each stockholder, and the number of shares owned by each; and to pay to the state treasurer a tax of 1 per cent on the market value of its stock. The state treasurer remits to the treasurer of each town or city the amount of such tax received upon such shares as were owned by persons who resided in such town or city. This tax is seen to be the same in all essential features as the general corporation tax of Massachusetts, already described. The amounts realized by the several cities in 1902 and 1903 are given in the table. The amount accruing under the above act to the city of New Britain appears to have been paid to the town of New Britain instead of to the city.

Illinois.—The agents of all foreign fire insurance companies are required by the statutes of Illinois to pay not to exceed 2 per cent of their gross premium receipts to the city or village in which their agency is located for the benefit of the local fire department. Twenty-five per cent of the amount so collected must be set apart for the firemen's pension fund in all cities whose population exceeds 50,000 and which have a paid fire department. Cities have the power to fix the rate of tax, not exceeding 2 per cent in any case. The amounts received from this source in 1902 and 1903 are given in the table. No such receipts, however, were reported for Quincy, Rockford, or Joliet. If any were collected they are doubtless included with other tax receipts.

Wisconsin.—A tax on foreign insurance companies, similar to that just described for Illinois, was the source of a revenue to the cities of Wisconsin of $43,356 in 1902 and $45,918 in 1903. Of these amounts Milwaukee received $27,947 in 1902 and $30,892 in 1903; Superior, $6,832 and $5,623; Oshkosh, $3,193 and $3,599; Racine, $2,945 and $3,219; and La Crosse, $2,439 and $2,585. In this state street railway, gas, electric light, power, and kindred public-service corporations are required by general statute to pay a local tax of 2 per cent on their gross earnings. This tax in 1902 yielded for the cities reported a total of $98,925, and in 1903, $102,976, distributed as follows for the two years: Milwaukee, $89,490 and $93,395; Superior, $3,326 and $2,544; La Crosse, $2,548 and $3,240; Racine, $2,456 and $2,591; and Oshkosh, $1,105 and $1,206. The aggregate receipts from both classes of special property and business taxes in 1902 were $142,281, and in 1903, $148,894.

New Hampshire.—The city of Manchester received from the state in 1902 as its share of the railroad, savings bank, and insurance taxes an aggregate of $101,877, and in 1903, $106,834. Railroads are taxed upon their capital stock, savings banks upon their deposits, and insurance companies upon their capital stock. The amounts received by Manchester in 1902 from these three classes of corporations were, respectively, $41,207, $57,513, and $3,157, and in 1903, $43,601, $60,232, and $3,001; and Nashua in 1903 received $12,450, $7,353, and $1,239 from the same sources.

Pennsylvania.—The state insurance commissioner is required by statute to collect from each agent of a foreign fire insurance company doing business in the state a tax of 2 per cent upon the gross premium receipts of the preceding year. One-half of the amount collected is paid to the treasurers of the several cities and boroughs to be used by them as a fund for disabled firemen. The amounts received by the several cities in 1902 and 1903 from this source are given in the table. The city of Reading was entitled to $1,267 in 1902, but this amount was not paid over by the state until 1903. In addition to the taxes mentioned, Reading received $8,358 in 1902, and $6,190 in 1903, and Allentown $4,407 in 1902, from frontage taxes for maintenance of waterworks. The aggregate amount of special property and business taxes received by all cities in the state in 1902 was $71,562, and in 1903, $73,394.

Maine.—The city of Portland received from the state in 1902 the sum of $38,291, and in 1903, $41,464, as its proportionate share of the state tax on the corporate stock of railroad and telegraph companies. Railroads are taxed under a law similar to that described for New Hampshire. Telegraph companies pay to the state treasurer a tax of 2½ per cent on the value of their lines within the state, including all poles, wires, buildings, etc. The treasurer credits each city with its proportion of the tax determined by the number of shares of stock owned by residents thereof.

Georgia.—In 1902 Atlanta received a revenue of $15,375 from a gross earnings tax on insurance companies, commission merchants, hotels, etc. In 1903 the receipts from these sources were $16,134.

The exact nature of this item of receipts is in doubt, and it may be that it includes a certain amount of business licenses. Augusta reported similar tax receipts in 1903 of $6,885.

Kansas.—Foreign fire insurance companies doing business in this state are required to pay a tax of 2 per cent on their gross premium receipts to the state superintendent of insurance, who distributes the entire amount so received to the treasurers of the firemen's relief associations in the several cities, in proportion to the amount received from the agencies in each city. In the case of cities having a fully paid and permanently employed fire department, the superintendent of insurance is instructed to pay the amount collected to the treasurer of such city. The law contains all the essential features of the Pennsylvania statute, with certain minor modifications.

Michigan.—The exact nature of the $4,000 received by the city of Grand Rapids in 1902 is in doubt. It was reported as an insurance tax.

New Jersey.—The only instance of special property and business taxes reported by New Jersey cities in 1902 was a tax of $3,353 collected in Jersey City. This was a 1 per cent tax upon the gross premium receipts of foreign fire insurance companies. In 1903, $6,676 was collected in Jersey City from foreign insurance companies, and $11,489 in Newark. In addition certain amounts were realized from the railroad and canal tax. This is a tax levied upon railroad and canal property by the state board of assessors. It is collected by the state and distributed to the several taxing districts in proportion to the mileage within their limits. In 1903 the cities of New Jersey received from this tax the following amounts: Jersey City, $337,989; Newark, $14,209; Paterson, $3,661; Camden, $17,976; Trenton, $6,661; Hoboken, $25,084; Elizabeth, $12,489; Bayonne, $7,535; Atlantic City, $2,119; Passaic, $1,090; Orange, $5,002; West Hoboken, $8. In 1902 the receipts from this tax were not reported separately, but were included with those from the general property tax. The aggregate receipts of all New Jersey cities in 1903 from special property and business taxes were $451,988. Of this amount $433,823 was from the railroad and canal tax, and $18,165 from the tax on foreign insurance companies.

Delaware.—Wilmington received $762 in 1902, and $1,150 in 1903, from a per capita tax upon horses and mules of specified classes.

West Virginia.—Wheeling received $2,412 from a 2 per cent tax upon the gross premium receipts of foreign insurance companies.

POLL TAXES.[1]

Inasmuch as poll taxes, wherever they exist, are always based upon general state laws and are uniform in all municipalities of a given commonwealth, the discussion which follows is arranged by states instead of by individual cities.

Massachusetts.—In Massachusetts the laws relating to poll taxes are more or less involved and are variously interpreted by the local officials. In practice the tax is a source of revenue for the local municipalities exclusively and not for the county or state. All cities levy and collect it. In Boston there is an exact record of the amounts levied and collected, the collection in 1902 being 57.5 per cent of the amount levied. The corresponding percentages reported by other cities where exact records were kept varied from 60 to 90. The poll tax in all these cities is a uniform one of $2 for each male inhabitant over 21 years of age.

Pennsylvania.—Next to Massachusetts the cities of Pennsylvania secured the largest revenue from poll taxes. The entire amount collected accrues to the benefit of the local governments, municipal and county. The taxes are of two kinds, uniform per capita and graded per capita. The latter are graded according to the occupation of the taxpayer, the assumed income of the occupation being included with property assessed ad valorem. Under the law every male resident of full age is subject to this tax on occupations. The assessable value of the occupation is fixed by each county for itself, but the most usual range is from about $30 for a common laborer up to $200 or $300 for a merchant or lawyer. On this assessed valuation the regular property tax is levied for each civil division having taxing power—county, city, borough, township, and school district. The payment of a state or county tax is necessary to qualify a voter, and hence the county occupation taxes are quite generally collected; but minor civil divisions are less successful, such collection in the case of nonproperty owners being quite difficult. As a result, in some municipalities no attempt whatever is made to collect these taxes except from persons assessed both for property and for occupation.

The school laws of the state provide that every male of full age shall be taxed at least $1 per annum for schools, and this provision largely increases the proportion of poll taxes in the school district over that of the county or borough. There are at least three methods of levying this tax: (1) In some school districts a tax of $1 is levied instead of an occupation tax, and the regular occupation tax, so called, is not collected for the benefit of the schools. (2) In most school districts the occupation tax, if less than $1 for any person, is increased to that sum, but if it be $1 or more it is collected as levied. (3) In certain other districts the dollar per head is added to the regular occupation tax, treating the law as authorizing an additional tax for schools of $1 for each male inhabitant. No separate record is anywhere kept of the amount of poll or occupation taxes collected. The figures given in Table 24 are in a few cases the result of careful compilation from the tax warrant register, and in others represent estimates of local officials. In seven cities no poll taxes for municipal purposes were reported by the agents for 1902. It is very probable that such taxes were collected, to a limited extent at least, in all of these cities and included with general property taxes.

New Jersey.—Of the ten cities in New Jersey containing over 25,000 inhabitants, the agents of the Census secured reports of poll taxes in 1902 and 1903 from seven. The state law permits a poll tax not to exceed $1 per adult male to be levied each year for local purposes. The figures of Table 24 show that only two of the ten cities, Newark and Elizabeth, secured from this tax all the income that might reasonably be expected therefrom, and that in the other cities either little use was made of this source of revenue, or else the returns were deficient. If larger amounts than those shown in the table were secured by any of these cities the excess is undoubtedly included with the general property taxes.

Alabama.—In Alabama the only compulsory poll tax is that of $1.50 for state purposes. Municipalities may levy an additional poll tax of not to exceed $2. Of the three Alabama cities containing over 25,000 inhabitants, only Birmingham reported the receipt of poll taxes for municipal purposes in 1902 and 1903.

Connecticut.—Five cities of Connecticut report poll taxes. The insignificant amounts shown in Table 24 indicate either that but few taxpayers pay these taxes or that the collections are to a large extent included in local reports among general property taxes.

Georgia.—Georgia requires the collection of a poll tax of $1 for state purposes, and permits municipalities to collect a similar tax for street purposes only. Of the Georgia cities with population over 25,000 inhabitants only Atlanta reported local poll taxes in 1902 and 1903.

Indiana.—In Indiana any city may collect poll taxes from male residents, not paupers, between 21 and 50 years of age. Of the five cities in the state, only Fort Wayne reports the receipt of revenue from such taxes in 1902. In 1903 both Fort Wayne and South Bend report these taxes, and it is very probable that a small amount thereof was collected in South Bend in 1902 and included with general property taxes for that year.

Iowa.—Cities in Iowa are empowered to call for two days of work on the highways from all males between 21 and 50 years of age, or to permit the commutation of this tax at the rate of $2 per day. Of the six Iowa cities only one, Council Bluffs, reported such tax levies paid in 1902. In this city the work done was val-

[1] See page 37, Table 24.

ued at $1,816, the cash collections amounted to $1,027, and collectors' commissions to $477, leaving net receipts of $2,366.

Louisiana.—The amount of poll taxes reported for New Orleans, La., is that collected. No statement is returned of tax levied and uncollected.

Maine.—The local poll taxes levied in Portland, Me., for 1902 aggregated $29,366, of which 50.1 per cent, or $14,716, was collected. A larger proportion was collected in 1903.

Montana.—The state of Montana annually levies a poll tax of $2 for state purposes. Municipalities may levy an additional tax of $3, subject to certain exceptions, for work on streets.

Nebraska.—No poll taxes were reported in 1902 in any of the large Nebraska cities except Lincoln, where such a tax is authorized by a provision of the city charter. No similar provision is found in the charter of Omaha or South Omaha. Only 48 per cent of the poll taxes levied in Lincoln in 1902 was collected.

Rhode Island.—All three cities in Rhode Island reported the receipt of poll taxes. The amount levied per capita varies, as does the percentage collected.

Tennessee.—The state of Tennessee levies a poll tax for state purposes, and permits cities to levy an additional tax for local purposes. Of the four cities in the state only Knoxville reported municipal receipts from this tax.

Texas.—The power to levy and collect a local poll tax is possessed by all Texas cities, and all except Dallas reported moderate poll tax receipts for 1902. The collections were relatively large, due to the enforcement of a provision of law making the payment of the poll tax a prerequisite to voting. In many cases the amount collected exceeded the amount levied, the excess representing the poll taxes of previous years collected in the current year.

Utah.—The city ordinances of Salt Lake City, Utah, demand two days' work on streets, or $3 commutation, for every male between 21 and 50 years of age, not otherwise exempt. In 1902, $783 was contributed in money and $11,058 in work, and in 1903 the total under these heads was $11,196.

Virginia.—In Virginia, cities may levy a local poll tax of $1, and both cities containing over 25,000 inhabitants reported the receipt of poll tax revenue.

West Virginia.—West Virginia authorizes its municipalities to demand two days of work on streets and roads, or the commutation of such work if the local council so orders. In Wheeling the poll tax collected was about 35.6 per cent of the amount that might have been assessed under the law.

Other states.—Of the other states with cities containing over 25,000 inhabitants, 20 reported no poll taxes in 1902. These states are Arkansas, California, Colorado, Delaware, the District of Columbia, Florida, Illinois, Kansas, Kentucky, Maryland, Michigan, Minnesota, Missouri, New Hampshire, New York, Oregon, Ohio, South Carolina, Washington, and Wisconsin.

PUBLIC-SERVICE PRIVILEGES.[1]

In the analysis which follows the cities are grouped by states arranged alphabetically:

Alabama.—Birmingham reported $10,800 in 1902 and $8,200 in 1903 from street railways for the privilege of laying new tracks. Mobile received $753 in 1902 and $2,433 in 1903 as a per centum tax of one-fourth of 1 per cent of the gross earnings of street railway, light, and gas companies. These receipts are collected under authority of local ordinances.

Arkansas.—The steam railway companies in 1903 paid Little Rock $265 for switching privileges in the streets, and street railway companies paid $1,000 for privilege of erecting a bridge.

California.—By the provisions of a state law, enacted in 1901, all public-service franchises must be offered at public sale to the highest bidder and, in addition, the charter of the operating company must contain a stipulation for the payment of at least 2 per cent of its gross earnings. Under the provisions of this law the city of Los Angeles received $153,600 for the sale of a franchise to a street railway company in 1903; Oakland $7,675 in 1902 for the sale of a franchise to a telegraph and telephone company, and $9,000 in 1903 from the sale of a franchise to a street railway company; while San Francisco received $1,070 in 1903 from the sale of a franchise to a sanitary reduction company. The proceeds from the 2 per cent gross earnings tax on street railway companies were as follows: Los Angeles, $5,471 in 1902; Oakland, $1,130 in 1902 and $1,255 in 1903; Sacramento, $10 in 1902 and the same amount in 1903, representing 1 per cent of the gross earnings of a portion of the road; while San Francisco received $21,428 in 1902 and $27,624 in 1903.

Colorado.—The payments for use of streets in Denver by public-service corporations in 1902 were $675, and in 1903, $1,325. The city also received 3 per cent of the gross earnings of an electric light and motor supply company. These payments aggregated $1,163 in 1902 and $1,168 in 1903.

Connecticut.—Hartford reported receipts of $10,682 in 1902 and $11,378 in 1903, the same being 2 per cent of the gross receipts of the street railway companies within the city limits.

Florida.—Jacksonville received in 1902, $2,535 from the railway and telephone companies as a percentage of their gross receipts, and in 1903, $3,214, while the street railway companies paid in 1903, $40,000 for the privilege of using the viaduct and changing several crossings.

Georgia.—Atlanta received in 1902, $5,807 from a street railway company for use of streets and $50,000 for privilege of consolidating its various lines. The receipts from the first source in 1903 were $11,922. There was received by the city of Augusta in 1902 the amount of $11,666 from the railway companies, and in 1903, $11,667. In 1903 from telephone companies the sum of $400 was received.

Illinois.—Chicago received $1,464 in 1902 from electric light companies for extension of their lines, $81,849 from telephone companies, and $21,228 from an elevated railroad. The last two receipts represent percentages of the gross receipts of the companies contributing. In addition to the foregoing, the city received $10,191 from street railway companies in the form of percentages based upon their track mileage within the city. In the same year $12,000 was received for the right of constructing a pipe and conduit line. The percentages of gross receipts of all these companies in 1903 aggregated $125,419, and the receipts on account of track mileage were $7,931. The city of Aurora received in 1903, $1,064 from telephone companies. East St. Louis in the same year received $200 from an electric light company. Joliet received $1,054 from telephone companies in 1902 and $1,211 in 1903. This represented a receipt in each year of $1 per pole. The same city received $1,000 for the sale of a franchise in 1902 and a like amount in 1903. Peoria reported privilege receipts of $1,000 from street railways in 1902.

Indiana.—Evansville received $8,319 in 1902 and $3,485 in 1903 from street railway companies. These payments represent 2 per cent of the gross receipts of the companies contributing. The same city received $200 in 1902 and $400 in 1903 from telegraph companies. Fort Wayne received $5,350 in 1902 and $5,340 in 1903 from telegraph, telephone, and electric light companies as payment of $1 per pole. The same city received $1,133 in 1902, and also in 1903, from its gas company, the receipts representing one-fourth cent per foot of pipe in streets. Indianapolis received $12,000 in 1902, and also in 1903, as a fixed annual payment from telegraph companies. Certain street railways pay, collectively, $30,000 annually, and others pay 5 cents for each round trip made by the cars. The total receipts from these two sources were $30,620 in 1902 and $31,057 in 1903. Light, power, and heating companies paid the city percentages on their gross earnings which aggregated in 1902, $18,599 and in 1903, $23,323. South Bend received $200

[1] See page 37, Table 24.

from a street railway company in 1903. This was at the rate of $5 per car. The amount represents payments for two years. Terre Haute received $16,000 in 1903 from an electric light company.

Iowa.—Cedar Rapids received $659 from street railway companies in 1903; Des Moines, $6,664 in 1902 from street railway, electric light, and gas companies. In 1903 the corresponding receipts were $2,000 from telephone companies, $5,542 from gas companies, $1,808 from electric light companies, $291 from street railway companies, and $64 from a street cleaning company. Sioux City in 1902 received $4,065, and in 1903, $4,435, as 2 per cent of the gross earnings of gas companies; from heating companies, $126 in 1902 and $128 in 1903. This also represented a per centum of gross receipts.

Kansas.—In 1903 Kansas City received from street railway companies $4,410; from gas companies, $734. The former payments represent 8 per cent of gross earnings and the latter 2 per cent. The same city received in 1903, $10,000 from sale of franchise to a street railway company. No separate report was received of similar receipts in 1902.

Kentucky.—Lexington reported the receipt of $2,400 in 1903 from a telephone company on account of the years 1902 and 1903. It was probably a payment for privileges, but may have been for services. Louisville received $100 in 1902 from street railways for sale of right of way, and $4,000 in 1903 for sale of franchise to street railway company. Newport received $800 in 1903 from street railway company. It may have been for services, receipts from licenses, or for privileges.

Louisiana.—New Orleans reported in 1902 receipts from payments in the nature of compensation for the use of streets amounting to $2,241, of which $751 is an annual payment by a ferry company and $1,490 a payment for the privilege of piping oil through the streets. The receipts from this source in 1903 were $1,020, while the ferry company paid $751 and $100 was received from the sale of a franchise.

Maine.—Portland received in 1902 and in 1903, $4,000 from street railway for privilege of crossing bridge, these being two of five annual installments of total revenue from that source.

Maryland.—Baltimore received $327,270 in 1902 and $347,626 in 1903 from street railway companies, being 9 per cent of their gross earnings.

Massachusetts.—Under the state law the cities of Massachusetts collect from street railway companies a so-called excise tax, which consists of a certain percentage of their gross earnings, and when received must be used for the repair of streets. These receipts in Table 24 are tabulated as from privileges and not as from special property taxes, being in lieu of other payments for repair of streets from such companies. Boston and the neighboring cities with which the elevated railway connects receive a so-called special franchise tax which is said to be for and in consideration of special privileges granted. These receipts are also included with those for privileges. In addition to the excise and special franchise taxes, Boston in 1902 received $384 from a pneumatic tube company for privileges granted, and $18 in 1903; while $19,092 was paid by street railway companies for work done by the city in 1903. Brockton in 1902 received $14,046 from various corporations for work performed by the city, and $2,513 from a telephone company for the privilege of laying a conduit. Fall River in 1903 received $751 from the street railway companies for the repair of streets. Holyoke in 1902 received $5,777 from street railway companies for repair of streets and $707 in 1903 for the removal of snow. Springfield in 1902 reported the receipt of $72,472 from the street railway company for the repair of streets and $2,088 for sprinkling of streets, and during 1903 from the same sources, $2,119.

Michigan.—Detroit received in 1902, $37,270 and in 1903, $41,896 as percentages of gross receipts of street railway companies. Grand Rapids received $231 in 1902 and $247 in 1903 from street railway companies. In 1903 this city also reported a receipt of $1,200 from street railways for a garbage contract, the terms of which were not ascertained.

Minnesota.—Duluth received $98 in 1902 from telephone companies for privileges.

Missouri.—Kansas City received $16,576 in 1902 and $18,563 in 1903 as 2 per cent of gross earnings of gas companies. From street railway companies the receipts from 8 per cent of gross earnings were, in 1903, $132,299. Telephone companies paid $3,078 in 1902 and $4,111 in 1903 for conduit privileges. Telephone and telegraph companies also reported in 1903 a so-called pole and wire tax of $280; refrigerator companies paid $32, being 2 per cent of their gross earnings; and a street cleaning company paid $112, also 2 per cent of gross earnings. St. Joseph received $625 in 1902 and 500 in 1903 from telephone companies. St. Louis received $92,651 in 1902 and $97,151 in 1903 from street railway companies, these being fixed payments. In addition, the city received from the same companies as a percentage of gross earnings $20,358 in 1902 and $22,113 in 1903. The privilege receipts from light and heating companies were $38,692 in 1902 and $86,520 in 1903. The like receipts from telegraph, telephone, and messenger companies were for the two years $67,536 and $57,744, respectively.

Montana.—Butte received from privileges in 1902, $3,377 and in 1903, $3,327 from electric light companies as 1 per cent of gross earnings. The corresponding receipts from street railway companies in 1902 were $1,955 and in 1903, $1,962. These receipts represented tonnage charges for ore hauled over city streets during the night. In 1903 the city also received $2,350 from sale of street railway franchises.

Nebraska.—Lincoln received in 1902 and 1903, $500 from telephone companies for privileges, and in 1903, $35 from heating companies. Omaha received in 1902, $13,062 and in 1903, $14,264 as percentage of gross earnings of gas companies. The corresponding receipts in 1903 from an electric light company were $5,684, and from street cleaning companies, $72. South Omaha received in 1902, $897 from telephone companies, being a percentage of gross earnings, and in 1903 from gas companies, $1,012.

New Jersey.—The state law requires all public-service corporations to pay 2 per cent of their gross receipts to the cities within which they operate, providing special contracts with cities do not call for larger payments. The receipts from public-service privileges for New Jersey cities are from this source, with the following exceptions: Receipts from privileges proper from street railways in Jersey City in 1902, $600; Camden, street railways, $181 in 1902 and $421 in 1903; Passaic, street railways, $448 in 1903; Trenton, from same companies, $374 in 1902 and $1,192 in 1903. The receipts included in Table 24 for specific services performed were for Elizabeth, in 1902, $616; Jersey City, in 1902, $2,765; Camden, in 1903, $15,365; Passaic, in 1903, $13,439.

New York.—The receipts by New York cities from public-service privileges were: Albany, $32 in 1902 and $254 in 1903; Buffalo received, as 3 per cent of gross earnings of street railway companies, $95,760 in 1902 and $85,851 in 1903; as 2½ per cent of gross earnings of cataract power and conduit company, $9,286 in 1902 and $11,440 in 1903; from 3 per cent of earnings of telephone companies, $1,645 in 1903. Elmira received $250 in 1902 and $750 in 1903 from street railway companies for the use of certain bridges. New York received $427,719 in 1902 from street railway companies, $5,373 from coach companies, $20,059 from gas companies, and $4,481 from electric light companies. The corresponding receipts in 1903 were $411,668 from railways, $22,164 from gas companies, and $5,855 from electric light companies. Rochester received, as 1 per cent of gross earnings of street railway companies, $10,566 in 1902 and $11,752 in 1903. Syracuse received from street railway companies $504 in 1902 and $4,900 in 1903. Yonkers received, as 3 per cent of the gross earnings of street railway companies, $13,118 in 1902. This was a payment for two years.

Ohio.—Cincinnati received $165,117 in 1902 from street railway

companies, and $233,918 in 1903. These were percentages of gross earnings, the greater amount in 1903 representing settlement of accounts of prior years. The percentage receipts of 1902 from electric light companies were $4,597. Receipts from rental of tracks over viaduct were $1,000 in 1902, and also in 1903, and for crossing waterworks ground, $540 in 1903. Receipts from gas companies in 1903, $6,505. The privilege receipts of Cleveland were, from gas companies, $84,284 in 1902 and $97,452 in 1903; from street railway companies, $8,310 in 1902 and $8,900 in 1903; from street railway companies for crossing viaduct, $3,889 in 1902 and $3,278 in 1903; receipts in 1903 from street cleaning companies, $505. The receipts from gas companies were percentages of gross earnings. Columbus received for privileges from electric light companies $1,520 in 1902 and $1,632 in 1903. These amounts were 2 per cent of gross earnings. Telephone companies paid, as 2 per cent of gross earnings, $2,992 in 1902 and $3,041 in 1903. Street railways paid $203 in 1903 as percentage on gross receipts, and for use of city bridge and viaducts $500 in 1902 and $1,491 in 1903. In 1902 the street railway companies paid $39,903 for privilege of doubling tracks on certain streets. Springfield reported privilege receipts of $100 from street railway companies in 1902 and 1903, and $149 from heat and power companies in 1902. Toledo received $3,454 in 1902 from street railways for privilege of entering city, and $2,400 from street railways for franchises.

Oregon.—Portland received $1,000 from telephone and telegraph companies in 1902 and 1903 for public-service privileges, and $4,500 in 1903 from street railway companies.

Pennsylvania.—Allegheny reported receipts from public-service privileges as follows: As 2 per cent of gross earnings of lighting companies, $3,584 in 1902 and $3,569 in 1903; as percentage of gross earnings of telephone companies, $16,846 in 1902 and $15,649 in 1903; from switch licenses granted street railway companies, $1,250 in 1902 and $2,000 in 1903; as percentage of gross earnings of heat, light, and power companies, $3,448 in 1903, and in same year $16 from an automatic signal and alarm company. In 1902 the city received $4,700 from sale of a franchise to street railway company, and in 1903, $6,400 from same source; and in 1902, $616 from the telephone companies, being 2 per cent of their gross receipts. Erie received as percentage of gross earnings of steam heating company $325 in 1902. Harrisburg received for sale of franchises in 1902, $10,000, and as percentage of gross earnings of street railway companies $2,890 in 1903. Philadelphia received as percentage of dividends of street railway companies $110,210 in 1902 and $113,574 in 1903. Pittsburg received $1,200 in 1903 from street railway companies for use of a bridge. Wilkesbarre received for sale of franchises to street railway companies in 1902, $15,000, and $565 for privilege of laying pipes. Williamsport received in 1902, $1,000 from a street railway company, and York received $1,251 from sundry corporations in 1902, and $462 from the same sources in 1903.

Rhode Island.—Pawtucket received for privileges from sundry corporations $1,499 in 1902 and $1,699 in 1903. Providence received as percentage of gross earnings of street railway companies $62,008 in 1902 and $66,275 in 1903. The same companies paid for use of streets $1,100 annually. Telephone companies paid as 3 per cent of their gross earnings $8,775 in 1902 and $10,060 in 1903; gas companies paid as 3 per cent of their gross earnings $22,795 in 1902 and $27,094 in 1903. Electric light companies paid as 5 per cent of gross earnings $33,320 in 1902 and $34,780 in 1903. Woonsocket received as percentage of gross earnings of street railway and telephone companies $1,747 in 1902, and in 1903, $1,163 from street railway, and $256 from telephone companies.

Tennessee.—Memphis reported receipts from privileges as follows: From street railway companies $8,962 in 1902, and $5,428 in 1903. The city received $5,000 in 1903 for privilege granted to two gas companies to consolidate. The $5,000 is part of a total payment of $50,000 to be paid to the city in seven years. Memphis also received in the same year $1,200 from street railways, $750 from electric light companies, and $750 from gas companies. It is possible that these latter amounts should have been tabulated as receipts from licenses. Nashville received as 5 per cent of gross earnings of gas companies $10,554 in 1902 and $11,791 in 1903; from street railway companies, $13,500 in 1902. This is a compromise payment after considerable litigation with the company. In 1903 the city received from the same companies $33,423 as 2 per cent of gross earnings.

Texas.—The privilege receipts of Dallas from public-service corporations were in 1902, $77,580 from street car companies for grant of franchise. The city also received $3,918 as franchise tax from the same corporation, and $450 from other corporations. The corresponding receipts from street car companies in 1903 were $3,243. Fort Worth received $500 in 1902 from a traction company for privilege of extra trackage. Houston in 1902 received $10,038 from sundry corporations, and in 1903 it received $2,510 from street railway companies. San Antonio received $35 from street railway companies in the nature of an occupation tax. This probably should have been tabulated as special business tax.

Utah.—Salt Lake City received for public-service privileges $6,825 in 1902 and $2,200 in 1903.

Virginia.—Norfolk received $12,671 in 1902 as 4 per cent of gross earnings of street railway companies, and $3,160 as 3 per cent of gross earnings of telephone companies. The total from both sources in 1903 was $13,275. Richmond in 1902 received $28,121 as percentage of gross earnings of street railway companies, and $14,399 as percentages of earnings of telegraph and telephone companies. The corresponding payments in 1903 were $23,113 and 11,052, respectively.

Washington.—Seattle received in 1902 as percentage of earnings of street railway companies $17,792, and in 1903, $27,642. From sale of street railway franchises the receipts in 1902 were $5,000 and in 1903, $1,000. Spokane received as percentage of gross earnings of gas companies $1,750 in 1902 and $3,805 in 1903. Tacoma received as percentage of gross earnings of street railway companies $289 in 1902 and $3,903 in 1903.

West Virginia.—Wheeling received from fixed annual contributions of street railway companies $760 in 1902 and also in 1903. The payments were based upon the mileage of the companies' tracks.

Wisconsin.—There are no payments reported as receipts from public-service privileges, because the state law provides for a 2 per cent tax on the gross earnings of the various public-service corporations. The payments so made were tabulated under special property and business taxes.

GENERAL TABLES

TABLE 1.—DATE OF INCORPORATION, POPULATION, AND AREA OF CITIES HAVING AN ESTIMATED POPULATION OF 25,000 OR MORE ON JUNE 1, 1903.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

City number.	CITY OR MUNICIPALITY.	Date of latest incorporation.	POPULATION. Estimated as of June 1— 1903	1902	1901	Decennial census, June 1— 1900	1890	AREA (ACRES), JUNE 1, 1903. Total.	Land.	Water.	INCREASE IN AREA (ACRES) SINCE JUNE 1, 1900. Total.	Land.	Water.

[1] Exclusive of water area of New York.
[2] Exclusive of area of Saginaw, Mich.
[3] Exclusive of areas of New York and Saginaw, Mich.
[4] Cities included in the report for 1902.
[5] Estimated.
[6] Not reported.
[7] Flats.
[8] Water.
[9] Based on state census of 1904.
[10] Based on state census of 1895.
[11] Census of 1890 defective; population in 1890 estimated as mean between 1880 and 1900.
[12] Population returned at the Twelfth Census, June 1, 1900.
[13] Marsh.

TABLE 1.—DATE OF INCORPORATION, POPULATION, AND AREA OF CITIES HAVING AN ESTIMATED POPULATION OF 25,000 OR MORE ON JUNE 1, 1903—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 51.]

GROUP III.—CITIES HAVING A POPULATION OF 50,000 TO 100,000 IN 1903—Continued.

City number.	CITY OR MUNICIPALITY.	Date of latest incorporation.	POPULATION. Estimated as of June 1— 1903	1902	1901	Decennial census, June 1— 1900	1890	AREA (ACRES), JUNE 1, 1903. Total.	Land.	Water.	INCREASE IN AREA (ACRES) SINCE JUNE 1, 1900. Total.	Land.	Water.

[1] Includes population of territory annexed in 1901.
[2] Estimated.
[3] State census.
[4] Area detached.
[5] Population of Waterbury town; city and town made coextensive in 1902.
[6] Based on Department of Excise census of February 1, 1905.
[7] Based on state census of 1904.
[8] Census of 1890 defective; population in 1890 estimated as mean between 1880 and 1900.

TABLE 1.—DATE OF INCORPORATION, POPULATION, AND AREA OF CITIES HAVING AN ESTIMATED POPULATION OF 25,000 OR MORE ON JUNE 1, 1903—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

GROUP IV.—CITIES HAVING A POPULATION OF 25,000 TO 50,000 IN 1903—Continued.

[1] Five plants: 1842, 1852, 1884, 1890, 1 not reported.
[2] Five plants: 1 acquired in 1857, 1 in 1903, and 3 built by city.
[3] Built by city.
[4] Not reported.
[5] Waterworks owned by city, but leased to private company.
[6] Includes 48.5 miles outside city limits.
[7] Includes 19.3 miles outside city limits.
[8] Two plants: 1885, 1900.
[9] Two plants: 1 acquired in 1890, 1 built by city.
[10] Two plants: 1 in 1899, 1 not reported.
[11] Two plants: 1 acquired in 1870, 1 built by city.
[12] Three plants: 1864, 1873, 1890.
[13] Three plants: 1 acquired in 1872, 2 built by city.
[14] City owns mains only.
[15] Two plants: 1883, 1891.
[16] Two plants: 1 acquired in 1898, 1 in 1902.
[17] Data are for nine months.
[18] Not included in the report for 1902.
[19] Gas works owned by city, but leased to private company.
[20] No report; gas works owned by city, but leased to private company.
[21] Four plants: 1887, 1892, 2 in 1896.
[22] Electric light plant owned by city, but leased to private company.

TABLE 9.—WATERWORKS, GAS WORKS, AND ELECTRIC LIGHT PLANTS OWNED AND OPERATED BY CITIES—Cont'd.

[Cities which do not report municipal waterworks, gas works, or electric light plants have been omitted from this table. For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1902.

[1] Transactions between departments and funds, exclusive of general transfers between minor offices.
[2] The same as the aggregate of cash on hand at beginning of year and receipts during year for all cities except Pittsburg, for which there is a variation of $15,971, due to an imperfect sinking fund report.
[3] Cities included in report for 1902.
[4] Including investment funds

Table 19.—GRAND SUMMARY OF PAYMENTS, RECEIPTS, AND BALANCES, CLASSIFIED BY INDEPENDENT BRANCHES AND FUNDS—Continued.

[1] Transactions between departments and funds, exclusive of general transfers between minor offices

[2] The same as the aggregate of cash on hand at beginning of year and receipts during year for all cities except Pittsburg, for which there is a variation of $15,971, due to an imperfect sinking fund report.

[3] Including investment funds.

TABLE 19.—GRAND SUMMARY OF PAYMENTS, RECEIPTS, AND BALANCES, CLASSIFIED BY INDEPENDENT BRANCHES AND FUNDS—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1903.

GROUP II.—CITIES HAVING A POPULATION OF 100,000 TO 300,000 IN 1903—Continued.

City number.	CITY OR MUNICIPALITY, AND INDEPENDENT BRANCHES AND FUNDS.	Date of close of fiscal year.	Payments to public.	Transfer payments.[1]	Cash on hand at close of year.	Aggregate of payments during year and cash on hand at close.[2]	Cash on hand at beginning of year.	Receipts from public.	Transfer receipts.[1]

[1] Transactions between departments and funds, exclusive of general transfers between minor offices.
[2] The same as the aggregate of cash on hand at beginning of year and receipts during year for all cities except Pittsburg, for which there is a variation of $15,971, due to an imperfect sinking fund report.
[3] Including investment funds.

TABLE 19.—GRAND SUMMARY OF PAYMENTS, RECEIPTS, AND BALANCES, CLASSIFIED BY INDEPENDENT BRANCHES AND FUNDS—Continued.

[1] Transactions between departments and funds, exclusive of general transfers between minor offices.
[2] The same as the aggregate of cash on hand at beginning of year and receipts during year for all cities except Pittsburg, for which there is a variation of $19,470, due to an imperfect sinking fund report.
[3] Exclusive of $436,049 belonging to private trust accounts which are not reported in 1902, but which are reported in 1903
[4] Cash of private trust funds included with cash of city government.
[5] Including investment funds.

TABLE 19.—GRAND SUMMARY OF PAYMENTS, RECEIPTS, AND BALANCES, CLASSIFIED BY INDEPENDENT BRANCHES AND FUNDS—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1902.

[1] Transactions between departments and funds, exclusive of general transfers between minor offices.
[2] The same as the aggregate of cash on hand at beginning of year and receipts during year for all cities except Pittsburg, for which there is a variation of $19,470, due to an imperfect sinking fund report.
[3] Including investment funds.

TABLE 19.—GRAND SUMMARY OF PAYMENTS, RECEIPTS, AND BALANCES, CLASSIFIED BY INDEPENDENT BRANCHES AND FUNDS—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1902.

[1] Transactions between departments and funds, exclusive of general transfers between minor offices.
[2] The same as the aggregate of cash on hand at beginning of year and receipts during year for all cities except Pittsburg, for which there is a variation of $19,470, due to an imperfect sinking fund report.
[3] Including investment funds.

Table 19.—GRAND SUMMARY OF PAYMENTS, RECEIPTS, AND BALANCES, CLASSIFIED BY INDEPENDENT BRANCHES AND FUNDS—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1902.

[1] Transactions between departments and funds, exclusive of general transfers between minor offices.
[2] The same as the aggregate of cash on hand at beginning of year and receipts during year for all cities except Pittsburg, for which there is a variation of $19,470, due to an imperfect sinking fund report.
[3] Including investment funds.

TABLE 20.—TOTAL PAYMENTS,

[For a list of the cities in each state arranged alpha-

1903.

[1] In Table 39 are given details of corporate payments combined with temporary payments made in error and later corrected by refunds. For detailed statement of payments and receipts grouped as corporate, see pages 28 and 29 of text.

[2] For detailed statement of payments and receipts grouped as temporary, see page 30 of text.

[3] Exclusive of transfers between minor offices and accounts.

[4] The same as the aggregate of cash on hand at beginning of year and all receipts during year for all cities except Pittsburg, for which there is a variation of $15,971, due to an imperfect sinking fund report.

RECEIPTS, AND BALANCES.

betically and the number assigned to each, see page 54.]

1903.

[4] The same as the aggregate of cash on hand at beginning of year and all receipts during year for all cities except Pittsburg, for which there is a variation of $15,971, due to an imperfect sinking fund report.

[5] In Table 40 are given details of corporate receipts combined with temporary receipts taken in error and later corrected by refunds. For detailed statement of payments and receipts grouped as corporate, see pages 28 and 29 of text.

[4] The same as the aggregate of cash on hand at beginning of year and all receipts during year for all cities except Pittsburg, for which there is a variation of $15,971, due to an imperfect sinking fund report.

[5] In Table 40 are given details of corporate receipts combined with temporary receipts taken in error and later corrected by refunds. For detailed statement of payments and receipts grouped as corporate, see pages 28 and 29 of text.

TABLE 20.—TOTAL PAYMENTS, RECEIPTS,

[For a list of the cities in each state arranged alphabet-

1902.

[4] The same as the aggregate of cash on hand at beginning of year and all receipts during year for all cities except Pittsburg, for which there is a variation of $19,470, due to an imperfect sinking fund report.

[5] In Table 40 are given details of corporate receipts combined with temporary receipts taken in error and later corrected by refunds. For detailed statement of payments and receipts grouped as corporate, see pages 28 and 29 of text.

[6] Exclusive of $436,049 belonging to private trust accounts which is not reported in 1902, but which is reported in 1903.

TABLE 20.—TOTAL PAYMENTS, RECEIPTS,

[For a list of the cities in each state arranged alphabetically

[1] Sinking, investment, and public trust funds.

[2] Including interest on general deposits, accrued interest on loans issued by city, and interest on deferred payments of taxes and special assessments, exclusive of receipts in the nature of penalties on delinquent taxes and special assessments.

[3] Net corporate interest receipts are gross interest receipts derived from "sources other than city securities held by permanent funds," less the included accrued interest received and paid by the city. Net corporate interest receipts constitute municipal investment income.

[4] Cities included in report for 1902.

[5] Including $26,733 for ground rents paid to city, included in Table 20 as service transfer.

TABLE 27.—RECEIPTS FROM INTEREST—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1903.

[1] Sinking, investment, and public trust funds.

[2] Including interest on general deposits, accrued interest on loans issued by city, and interest on deferred payments of taxes and special assessments, exclusive of receipts in the nature of penalties on delinquent taxes and special assessments.

[3] Net corporate interest receipts are gross interest receipts derived from "sources other than city securities held by permanent funds," less the included accrued interest received and paid by the city. Net corporate interest receipts constitute municipal investment income.

TABLE 27.—RECEIPTS FROM INTEREST—Continued.

[1] The term "debt obligations," as here used, includes all bonds; temporary and other loans, including overdrafts by the treasurer; and all warrants outstanding at the close of year.
[2] Per capita debt shown in Table 38.
[3] Sinking, investment, and public trust funds.
[4] Total sinking fund assets can be obtained from Table 34.
[5] For explanation of factors producing variations between the figures here given and those that may be derived, by calculation, from the columns "issued during year" and "paid or canceled during year," see accompanying text.

AND PAID DURING YEAR, TOGETHER WITH RECEIPTS AND PAYMENTS DURING YEAR ON ACCOUNT OF SAME.

ically and the number assigned to each, see page 54.]

1903.

PAYMENTS DURING YEAR FOR REDEMPTION OR CANCELLATION OF DEBT OBLIGATIONS.			RECEIPTS DURING YEAR FROM DEBT OBLIGATIONS ISSUED.			EXCESS OF RECEIPTS OVER PAYMENTS, EXCLUSIVE OF CHANGES IN SINKING FUND ASSETS.			INCREASE IN SINKING FUND ASSETS.		City number.

[6] Decrease.
[7] Cities included in report for 1902.
[8] Not including $2,975 of outstanding warrants canceled during the year.
[9] Excess of payments over receipts.
[10] Including $500,000 on railroad bonds for which the city reports no cash receipts.
[11] Includes the addition to city debt caused by the combination of the governments of the county and of certain school districts with that of the city.

TABLE 35.—GRAND SUMMARY OF DEBT OBLIGATIONS[1] OUTSTANDING AT CLOSE OF FISCAL YEAR, AND ISSUED AND

[1] The term "debt obligations," as here used, includes all bonds; temporary and other loans, including overdrafts by the treasurer; and all warrants outstanding at the close of the year.
[2] Per capita debt shown in Table 38.
[3] Sinking, investment, and public trust funds.
[4] Total sinking fund assets can be obtained from Table 34.
[5] For explanation of factors producing variations between the figures here given and those that may be derived, by calculation, from the columns "issued during year" and "paid or canceled during calendar year," see accompanying text.

PAID DURING YEAR, TOGETHER WITH RECEIPTS AND PAYMENTS DURING YEAR ON ACCOUNT OF SAME—Cont'd.

ically and the number assigned to each, see page 54.]

1903.

[1] The term "debt obligation," as here used, includes all bonds; temporary and other loans, including overdrafts by the treasurer; and all warrants outstanding at the close of the year.
[2] Per capita debt shown in Table 38.
[3] Sinking, investment, and public trust funds.
[4] Total sinking fund assets can be obtained from Table 34.
[5] For explanation of factors producing variations between the figures here given and those that may be derived, by calculation, from the columns "issued during year" and "paid or canceled during year," see accompanying text.
[6] Decrease.

PAID DURING YEAR, TOGETHER WITH RECEIPTS AND PAYMENTS DURING YEAR ON ACCOUNT OF SAME—Cont'd.

ically and the number assigned to each, see page 54.]

1903.

[1] The term "debt obligations," as here used, includes all bonds; temporary and other loans, including overdrafts by the treasurer; and all warrants outstanding at the close of the year.
[2] Per capita debt shown in Table 38.
[3] Sinking, investment, and public trust funds.
[4] Total sinking fund assets can be obtained from Table 34.

PAID DURING YEAR, TOGETHER WITH RECEIPTS AND PAYMENTS DURING YEAR ON ACCOUNT OF SAME—Cont'd.

and the number assigned to each, see page 54.]

1902.

PAYMENTS DURING YEAR FOR REDEMPTION OR CANCELLATION OF DEBT OBLIGATIONS.			RECEIPTS DURING YEAR FROM DEBT OBLIGATIONS ISSUED.			EXCESS OF RECEIPTS OVER PAYMENTS, EXCLUSIVE OF CHANGES IN SINKING FUND ASSETS.			INCREASE IN SINKING FUND ASSETS.		City number.

[1] The term "debt obligations," as here used, includes all bonds; temporary and other loans, including overdrafts by the treasurer; and all warrants outstanding at the close of the year.
[2] Per capita debt shown in Table 38.
[3] Sinking, investment, and public trust funds.
[4] Total sinking fund assets can be obtained from Table 34.

PAID DURING YEAR, TOGETHER WITH RECEIPTS AND PAYMENTS DURING YEAR ON ACCOUNT OF SAME—Cont'd.

and the number assigned to each, see page 54.]

1902.

[1] The term "debt obligations," as here used, includes all bonds; temporary and other loans, including overdrafts by the treasurer; and all warrants outstanding at the close of the year.
[2] Per capita debt shown in Table 38.
[3] Sinking, investment, and public trust funds.
[4] Total sinking fund assets can be obtained from Table 34.

PAID DURING YEAR, TOGETHER WITH RECEIPTS AND PAYMENTS DURING YEAR ON ACCOUNT OF SAME—Cont'd.

and the number assigned to each, see page 54.]

1902.

[5] For explanation of factors producing variations between the figures here given and those that may be derived, by calculation, from the columns "issued during year" and "paid or canceled during year," see accompanying text.

[6] Decrease.

[7] Excess of payments over receipts.

TABLE 36.—DEBT OBLIGATIONS[1] OUTSTANDING AT CLOSE OF YEAR.

[1] The term "debt obligations," as here used, includes all bonds; temporary and other loans, including overdrafts by the treasurer; and all warrants outstanding at close of year.

[2] Cities included in report for 1902.

[3] Of this amount, $1,358,534 consisted of "special assessment warrants outstanding."

TABLE 36.—DEBT OBLIGATIONS[1] OUTSTANDING AT CLOSE OF YEAR—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1903.

[1] Exceeds corporate payments as given in Table 20 by amount of refunds included, which refunds are shown as receipts in Table 30.
[2] Municipal investment and industrial expenses for interest are included with general and municipal service expenses, instead of with municipal investment and industrial expenses.
[3] Expenses other than service transfers in Table 21, together with payments, other than municipal, "for purposes of trusts," in Table 32.
[4] For details, see Table 22.
[5] Outlays (exclusive of service transfers) in Table 23, less "receipts from sales of real property" in Table 30.
[6] For cities showing "excess of payments over receipts" in Table 35.
[7] Cities included in report for 1902.
[8] Less than 1 cent.

TABLE 39.—TOTAL AND PER CAPITA CORPORATE PAYMENTS, WITH ACCOMPANYING REFUNDS, CLASSIFIED BY PRINCIPAL PURPOSES FOR WHICH MADE—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

[1] Exceeds corporate payments as given in Table 20 by amount of refunds included, which refunds are shown as receipts in Table 30.
[2] Municipal investment and industrial expenses for interest are included with general and municipal service expenses, instead of with municipal investment and industrial expenses.
[3] Expenses other than service transfers in Table 21, together with payments, other than municipal, "for purposes of trusts," in Table 32.
[4] For details, see Table 22.
[5] Outlays (exclusive of service transfers) in Table 23, less "receipts from sales of real property" in Table 30.
[6] For cities showing "excess of payments over receipts" in Table 35.
[7] Less than 1 cent.

TABLE 39.—TOTAL AND PER CAPITA CORPORATE PAYMENTS, WITH ACCOMPANYING REFUNDS, CLASSIFIED BY PRINCIPAL PURPOSES FOR WHICH MADE—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1903.

GROUP IV.—CITIES HAVING A POPULATION OF 25,000 TO 50,000 IN 1903—Continued.

[1] Exceeds corporate payments as given in Table 20 by amount of refunds included, which refunds are shown as receipts in Table 30.
[2] Municipal investment and industrial expenses for interest are included with general and municipal service expenses, instead of with municipal investment and industrial expenses.
[3] Expenses other than service transfers in Table 21, together with payments, other than municipal, "for purposes of trusts," in Table 32.
[4] For details, see Table 22.
[5] Outlays (exclusive of service transfers) in Table 23, less "receipts from sales of real property" in Table 30.
[6] For cities showing "excess of payments over receipts" in Table 35.
[7] Less than 1 cent.

TABLE 39.—TOTAL AND PER CAPITA CORPORATE PAYMENTS, WITH ACCOMPANYING REFUNDS, CLASSIFIED BY PRINCIPAL PURPOSES FOR WHICH MADE—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

[1] Exceeds corporate payments as given in Table 20 by amount of refunds included, which refunds are shown as receipts in Table 30.
[2] Municipal investment and industrial expenses for interest are included with general and municipal service expenses, instead of with municipal investment and industrial expenses.
[3] For details, see Table 21.
[4] For details, see Table 22.
[5] Outlays (exclusive of service transfers) in Table 23, less "receipts from sales of real property" in Table 30.
[6] For cities showing "excess of payments over receipts" in Table 35.
[7] Less than 1 cent.

TABLE 39.—TOTAL AND PER CAPITA CORPORATE PAYMENTS, WITH ACCOMPANYING REFUNDS, CLASSIFIED BY PRINCIPAL PURPOSES FOR WHICH MADE—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1902.

GROUP IV.—CITIES HAVING A POPULATION OF 25,000 OR OVER IN 1900 AND LESS THAN 50,000 IN 1903—Continued.

[1] Exceeds corporate payments as given in Table 20 by amount of refunds included, which refunds are shown as receipts in Table 30.
[2] Municipal investment and industrial expenses for interest are included with general and municipal service expenses, instead of with municipal investment and industrial expenses.
[3] For details, see Table 21.
[4] For details, see Table 22.
[5] Outlays (exclusive of service transfers) in Table 23, less "receipts from sales of real property" in Table 30.
[6] For cities showing "excess of payments over receipts" in Table 35.
[7] Less than 1 cent.
[8] Decrease in value of fixed assets.

TABLE 40.—TOTAL AND PER CAPITA CORPORATE RECEIPTS, WITH ACCOMPANYING REFUNDS, CLASSIFIED BY PRINCIPAL SOURCES FROM WHICH DERIVED.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1903.

[1] Exceeds corporate receipts as given in Table 20 by amount of refunds included, which are shown as payments in Table 30.
[2] For details, see Table 41.
[3] Net corporate interest receipts in Table 27.
[4] For details, see Table 28.
[5] For details, see Tables 24, 25, 29, and 30.
[6] For cities showing "excess of receipts over payments," see Table 35.

TABLE 40.—TOTAL AND PER CAPITA CORPORATE RECEIPTS, WITH ACCOMPANYING REFUNDS, CLASSIFIED BY PRINCIPAL SOURCES FROM WHICH DERIVED—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1902.

GROUP IV.—CITIES HAVING A POPULATION OF 25,000 OR OVER IN 1900 AND LESS THAN 50,000 IN 1903—Continued.

[1] Joint expenses of administering public highways and sanitation are included with expenses of public highways. For details, see Table 21.
[2] Included in column of outlays for "public highways and sanitation" in Table 23.
[3] For details, see Table 21.

TABLE 43.—TOTAL AND PER CAPITA PAYMENTS FOR SPECIFIED EXPENSES AND OUTLAYS, WITH ACCOMPANYING REFUNDS—Continued.

[For a list of the cities in each state arranged alphabetically and the number assigned to each, see page 54.]

1902.
